PREFACE.

IN the year 1785, a fingular phænomenon made its appearance, in the world of literature, under the title of Bhagvat-Geeta, or Dialogues of Creeshna and Arjoon. This production was afferted to be a translation by Mr. Wilkins from a Sanscreet poem, denominated the Mahabbarat, or Great War, of which poem it forms an episode, and the public were informed that it is believed in India to be of the venerable antiquity of four thousand years, and that it contained all the grand mysteries of the Hindoo Religion.

The GEETA was ushered into the world with all the importance which so invaluable a monument of Indian science seemed to merit: it was prefaced by a recommendatory-letter from the Governor-General of Bengal to the Directors, and published at the expense of the Company. The profound theological A 4 and

and metaphyfical doctrines which were inculcated in it, with the date to which it laid claim, rouzed the attention and excited the curiofity of the public, whose eyes about that period began, in a more particular manner, to be directed towards the history and literature of India. It fell into my hands at a period, when, from being engaged in writing upon a subject connected with an interesting period of Perhan history, I had recently perused with attention the very learned work of Dr. Hyde, " De Historia Religionis Veterum Perfarum," and, as I thought I traced a furprifing fimilitude in the theological fystems of Zoroaster and Bran-MA, particularly in the mutual veneration of the Sun and Fire, I was gradually led on to that more accurate investigation and comparison of their principles, of which the Differtation on the Religion of Hindostan is the refult.

From considering the Religion, I passed, by an easy and natural transition, to an attentive consideration of the History, the Philosophy, and Literature, of this wonderful and remote race of men. The light, which so strongly radiates from the page of classical antiquity upon most other abstrace points of literary research. fearch, cast but a glimmering ray on this obfeure subject; and indeed its affertions were, in many instances, diametrically opposite to what, from the information of modern travellers of high repute, is known to be the fact. Whatever genuine information could possibly be obtained relative to India, its early history and literature seemed only to be acquired through the medium of faithful verfions from the Sanfcreet, the ancient original language of the country, and the grand repofitory of all its history and sciences; but, unfortunately, at that period, there were only three gentlemen who were supposed to be thoroughly acquainted with it, viz. Sir William Jones, Mr. Halhed, and Mr. Wilkins.

Mr. Halhed had already presented to the public that astonishing proof of the early wisdom of the Indians, and their extensive skill in jurisprudence, "the Code of Gentoo Laws," compiled at Benares, by a number of Brahmins assembled for the purpose by Mr. Hastings, from the most ancient Sanscreet treatises on the subject. The Code bears, indeed, strong internal evidence of the most profound antiquity, and in general by the investigator of the policy and manners of Oriental nations, as well as in particular by the history of Indian

Indian events, must ever be considered as an invaluable acquifition. The veil that covered their theology, their metaphyfics, and their jurisprudence, was thus happily removed. -Their ethics, or fystem of morals, remained still to be disclosed; and we wanted an undoubted original picture, faithfully drawn from life, of Indian habits and manners in the most ancient periods of their empire.

Happily, to gratify the excited curiofity of the public, the grand defiderata were foon obtained. Mr. Wilkins, who first sprang the mine, and has ever fince been indefatigable in his efforts to bring to light the inestimable, but buried, treasures of Sanscreet literature, in 1787, published a translation of the HEE-TOPADES, or Amicable Instructions. This work, which Sir William Jones denominates " the most beautiful, if not the most ancient, collection of apologues in the world," was originally written in Sanscreet, about eleven hundred years ago, by a venerable Brahmin, of the name of Veeshnu-Sarma. So highly has the HEETOPADES been effected for the foundness of its moral precepts, the judicious maxims it inculcates for the regulation of human conduct, both in private and public station, and the beautiful simplicity of many

of the allegories in which they are delivered, that under other names, as the Fables of Pilpay, &c. &c. it has already been translated into more than twenty languages of Europe and Asia. In those translations, however, it has fuffered much mutilation, as well as confiderable distortion in its primitive feature of simplicity; and it is only in Mr. Wilkins's almost literal version that we see the faithful por-

trait of the beautiful original.

In 1788, Sir William Jones published his Translation of SACONTALA, or the Fatal Ring, an Indian Drama, written by Calidas, an author of distinguished merit in that class of Indian literature, who flourished about a century before the commencement of the Christian æra. In this publication we find exhibited a genuine and lively portrait of Indian manners and fentiments, as they actually existed nearly two thousand years ago, and poslibly at a period far more ancient; fince, according to the Brahmins, Dushmanta, the regal hero of the piece, and hufband of Sacontala, fate upon the throne of India above a thousand years before Christ; and it is probable that the poet would so far observe confistency, as to endeavour to represent the manners of the age in which Dushmanta reigned.

It is, indeed, a most valuable acquisition to the writer who would wish accurately to delineate those manners, and throws confiderable light upon many points, relative to their customs and opinions, with which the ancients were very fuperficially acquainted, and which they have, frequently, very groffly mifrepresented. These four publications I have used as a fort of commentary to rectify what was false or elucidate what was obscure in Diodorus Siculus, Herodotus, Strabo, Philostratus, and Pliny; and I trust the following pages, in which their relations are contrasted, will evince both the minute attention, and the unwearied diligence of the author, who first, in Europe, undertook the arduous talk of comparing Sanscreet and Greek literature.

These various efforts, so worthy of a great and enlightened nation, to investigate the sciences, and develope the complicated annals of a people, concerning whom more has been written, and less really known, than any other nation that anciently tenanted the vast regions of Asia, were accompanied by the most active and vigorous personal exertions, of a similar kind, upon the spot. — The palmyraleas, the papyrus, and even the inscribed vellum, will perish in a few revolving centuries;

but the engraved tablet of copper or brais. and the folid column of marble, must, for a far more extended period, defy the corroding violence of time. - These were diligently fought for, not only in our own fettlements in the East, but through all the extent of Hindostan, by that literary society of gentlemen established under the auspices of Sir William Jones, in Calcutta, denominated the Affatic Society. The scientific labours of these gentlemen are displayed in that grand repository of Sanscreet information, the two volumes of ASIATIC RESEARCHES, which have foccessively arrived (the last only within a few months) in this country, the ministry of which never did a more wife or prudent thing, than when they fent out the great Orientalist, their president, to superintend the jurisprudence of those Afiatic provinces, the prevailing languages and manners of which were so familiarly known to him. The early efforts of that Society were crowned with fignal fuccess. The buried tablet has been dug from the bowels of the earth; the fallen and mouldering pillar has been reared; coins and medals, ftruck in commemoration of grand and important events, have been recovered from the sepulchral darknels of two thousand years; and the obsolete characters,

characters, engraved on their fuperficies, have, with immense toil, been deciphered and explained. It is by the increasing and concentrated light which those precious remains throw upon the classic page, that the footsteps of the historian must be guided, and his path through the obscure maze of antiquity illumined.

Abul Fazil, the learned Secretary of Akber, the most magnificent and powerful monarch that ever swayed the Indian sceptre, had previously, in the fixteenth century, by the most laudable and strenuous exertions, in fome degree explored that path and penetrated that obscure maze. All the authority however of fovereign power, exercifed in the mildest manner, and employed to promote the best purposes, by the most liberal of princes, added to the weight of influence, which his own distinguished talents and virtues gave him over the grateful race of Brahma, introduced that diligent investigator of Sanscreet antiquities little farther than to the threshold of the grand Temple of Indian theology and science. Of the vigour and extent of the Secretary's researches, the AYEEN AKBERY, or Mirror of Akber, remains a wonderful proof; and Mr. Gladwin, in obliging the Afiatic world with a version of that work, in 1783, has much contributed

tributed to mitigate the toil of the Indian Geographer and Annalist. Of this celebrated production, which Major Rennel terms an Authentic Register of all matters relating to Hindostan, that is, as far as they were known to Akber, being equally high in price, and difficult to be procured, I was not fo early in poffession as I could have wished; but having, at length, by the favour of Samuel Johnson, Esq. of the India-House, obtained it, I have amply profited by that gentleman's spontaneous kindness. The first volume of this Oriental performance treats rather of Mohammedan than Indian manners; of the arrangement of the court of Akber; and of the economy of his household. In the history of that Emperor's reign it will be of infinite use; but was foreign to the subjects more immediately under discussion. Of the second volume, which contains the geography of the Soobahs, and a concife history of their several sovereigns, the reader will find in the following sheets so correct an abridgement as cannot fail highly to gratify his curiofity, and cannot injure the translator, who, I heard with regret from his London bookfeller, is no more! Of the third volume, which treats of the astronomical conceits, the theological, metaphyfical, and other fcientific speculations, fpeculations, as well as of the feveral degrees and numerous penances, of the Hindoos, he will also find the substance interspersed throughout the body of these extended Differtations.

The great work of the MAHABBARAT, now translating by Mr. Wilkins, and of which Abul Fazil himfelf anciently gave a Perfian version, not being, as yet, in the possession of the public, I can only, for the present, submit to that public the epitome of its contents, which is prefixed to Ferishtah's History of Hindostan, compared throughout, with great diligence, with the Perfian Annals of Mirkhond, with the Tartar History of Abulgazi Bahadur, and fuch other Oriental Histories as are in my possession, of which the number is not small, nor have they been procured by the author without infinite labour and refearch, or heavy and accumulated expense. This chasm, however, with the permission of the translator, shall hereafter be filled up, and the reader will, I trust, find the dark period and events, to which that voluminous detail bears reference, as fatisfactorily elucidated, as I flatter myself he will the obscure history of the AVATARS themselves, or the ten descents of Veeflinii. During these inquiries into the remotest historical antiquities of Asia, as I have constantly

constantly kept the Sacred Volumes and the invaluable fragments of Chaldæan History by Berofus before me, with all that Bishop Cum-. berland, Stanley, Hyde, Athanafius Kircher, and others, have written upon the Phænicians, Chaldwans, Perfians, and Egyptians; and, as I have diligently contrasted them with the later and more profound disquisitions of Sir William Jones, in the Afiatic Refearches, relative to the origin and early history of those nations, I trust I shall not be thought prefumptuous for offering a decifive opinion with respect to that remote period and those apparently fabulous events. I confider the whole as only a corruption of ancient Chaldwan history and traditions, and therefore have referred the incidents of the GREAT WAR recorded in the Mahabbarat, and all the romantie accounts, given in the same volume, of the battles of the Indian Soors and Asoors, that is, the good and evil Genii, to the contests of the fons of Shem and Ham for the empire of the infant world. In short, I have the most confident hope of being able to DEMONSTRATE, as I proceed, that the wars of the Giants and Titans of other nations are known in India under that denomination; and the evidence which I shall adduce of the wonderful similitude VOL. I.

tude between the primitive theology and manners of the Chaldæans and Indians, especially in the veneration for facred fauntains, formerly so prevalent in Cashmere, the region of India probably first inhabited, will go far towards consuting the romantic ideas that have gone forth into the world, of the unfathomable antiquity of the Hindoos, and of the ark of Noah resting upon the Indian Caucasus, instead of Mount Baris in Armenia.

After having read with laborious attention whatever has been written concerning India by the Perfian and Arabian historians, of whom we have been favoured with elegant Latin verfions by Pocock, Erpenius, Golius, Hudfon, Reiske, and other great Oriental scholars, I fate down to the ferious re-perufal and examination of what the ancient authors, efteemed classical, had delivered in relation to that country; but, from the little I already knew of its native history, I soon found their accounts, for the most part, to be replete with misconception, if not with gross error. Porus, or rather Pourava, (for that, Sir W. Jones has informed me, was the real name of the undaunted oppofer of the great Alexander,) the reigning rajah of a country called the PANJAB, from the five rivers that water it,

feems to have been univerfally mistaken for the Supreme Monarch of India, to whom, probably, that prince was only one, though not the least formidable, among many tributary princes; and the subjugation of a province of that mighty empire was, with the usual vanity of the Greeks, magnified into the conquest of India. By comparing, however, the relations of the Greek and Roman writers with those of FERISHTAH, and the other Oriental historians, of whom, a lift of those in my possession is added to this preface, I gradually obtained that knowledge of the ancient history and manners of the Indians, which I have attempted to exhibit in the volumes which will fuccessively solicit the attention of the indulgent public. Had there been any work at that time published, or had I known of any work intended to be published, that promised to include the ancient and modern history of India, according both to Sanfcreet and Classical writers, and present to the reader a comprehenfive view of the wonderful transactions performed, during the period of near four thoufand years, on that grand theatre, I should never have ventured upon an undertaking at once fo arduous and fo hazardous.

B 2

As foon as I had formed the refolution, in the best manner I might be able, to supply that defect, I communicated my intention to Sir William Jones, in India, with whose friendship I was honoured at an early period of life, and who returned me fuch an answer as encouraged me both to proceed with vigour and to aspire with ardour. He was at the same time so obliging as to impart a few hints for the conduct of the work, which I have anxiously endeavoured to follow. I likewise fubmitted the Proposals for my intended Hiftory to the Court of Directors of the East-India Company, accompanied with a Letter, in which I took an extensive survey of the great outlines of that history. Nothing could be more flattering to an infant undertaking, than the applause which that Letter procured me from the most respectable quarters: and, indeed, as a proof that the distinguished body of men, to whom it was addressed, thought that the author had exerted laborious affiduity in the investigation of the obscure fubject which he professed to elucidate, an immediate answer was returned, and forty sets of the History subscribed for. Both the Letter itself and the Answer are printed by way of introduction to the first volume of the History itself.

The liberal conduct of the Directors, on this occasion, to an unpatronized stranger, affords decisive evidence that an enlightened assembly of British merchants are equally above the baseness of prejudice and the meanness of avarice; and that, bowever bumble the instrument, they are never indifferent to the advancement of Literature and the diffusion of Science.

I frankly own to the candid reader that I knew not, at the time, the full extent and magnitude of the undertaking in which I had embarked. At my very entrance into the grand historic field, through the whole ample circuit of which it became necessary for me to range, a field over-run with exotic and luxuriant vegetation, such a prospect unfolded itself, as, I confess, at once disheartened and terrified me. Such a variety of complicated and profound. subjects pressed for discussion, before the way could be sufficiently cleared for an entrance upon the immediate path of History; fo deeply were the wild fables of Indian Mythology blended with the authentic annals of regular History; that the proper execution of the arduous work feemed to demand the exertion of abilities, as well as the command of fortune, to which I could by no means lay claim. It foon occurred to me, that, instead of the B 3 folitary

folitary exertions of an individual of moderate talents, of confined and precarious income, with no powerful patron in the high and splendid circles of life to protect, and no opulent private connections vigorously to promote, the work, the completion of fo extensive a plan as that laid down by myself required the united efforts of some considerable literary fociety, combining a splendid assemblage of genius and erudition, and embodied for the purpose, with every public library in the kingdom at their fervice, and, I might add, the public treasury also at their command. The stupendous fystem of the BRAHMIN CHRO-NOLOGY, extending back through millions of years; the obstinate denial of a GENERAL DELUGE by those Brahmins; the perplexing doctine of a TRINITY IN THE DIVINE NA-TURE, for ever occurring in the operations of the grand Indian Triad of Deity, Brahma, Veeshnu, and Seeva, a doctrine not to be traced to any immediate connection with the Jewish nation, yet more conspicuous in India than even in the Triple Mithra of Persia, and the Globe, the Wing, and the Serpent, which, according to Kircher, formed the Trinity of Egypt; these were among the numerous, the delicate, and abstruse, topics, which neither the clerical

clerical nor historical function in which I had engaged would allow of being passed over in filence.

I had not, at first, formed the remotest conception, that, to enter into the spirit of the Ancient Sanscreet History of India, or to render that history intelligible to the reader, it would be necessary to engage in the deepest astronomical speculations of the Oriental world; yet, as I advanced in my inquiries, I found that kind of knowledge to be indifpenfable; for, in fact, the primeval histories of all the ancient empires of the earth amount to little more than the romantic dreams of astronomical mythology. This is particularly evident in Hindostan, from the two great and most ancient rajah-families being denominated Sur-YA-BANS and CHANDRA-BANS, or Children of the Sun and Moon.

I have entered farther into these astronomical disquisitions than my friends may think was either necessary, or, in regard to the sale of my book, prudent; but this particular subject was intimately connected with others of a higher nature and more momentous research.—The daring affertions of certain sceptical French philosophers with respect to the Age of the World, whose arguments I have B 4 attempted

attempted to refute, arguments principally founded on the high assumptions of the Brahmins and other Eastern nations, in point of chronology and aftronomy, could their extravagant claims be fubstantiated, have a direct tendency to overturn the Mosaic system, and, with it, Christianity. I have, therefore, with what success the reader must hereafter determine, laboured to invalidate those claims, with all the perfevering affiduity which a hearty belief in the truth of the former, and an unshaken attachment, not merely professional, to the latter fystem, could not fail of exciting and animating. While engaged in those inquiries, the fortunate arrival of the fecond volume of the Afiatic Researches, with the various differtations on the subject, of Sir William Jones, and of Mr. Davis, who has unveiled the aftronomical mysteries of the famous Surya Sin-DHANTA, the most ancient Sanscreet treatise on that science, enabled me to pursue with satisfaction, with fecurity, and, I trust, to demonstration, the plan which I had previously formed, and upon which alone the difficulty can be folved.

Guided by fuch indisputable authorities, I trust I have proved, in the first volume of my History, that the personages, who are said to

have flourished so many thousand years in the earliest ages, were of celestial, not terrestrial, origin; that their empire was the empire of imagination in the fkies, not of real power on this globe of earth; that the day and year of Brahma, and the day and year of Mortals, are of a nature widely different; that the whole jargon of the Yugs, or grand periods, and confequently all those presumptuous affertions of the Brahmins, relative to the earth's antiquity, have no foundation but in the great folar and lunar cycles, or planetary revolutions; and that CHALDEA, and not INDIA, was the parent-country of mankind. In proof of this last affertion, I have produced a few remarkable instances which evince the primitive languages of Chaldra and India not to be greatly diffimilar; that the name ADAM may be traced to the Sanfcreet root, ADIM, or the first; that in the prophetic and regal title of MENU of India may be recognized the patriarch Noah; that their great hero BALI, an appellative fynonymous with the Bel, or Baal, of their neighbours, is no other than Belus; and that all the prodigies of valour and wisdom fabled of the renowned Dionysius of India, if true, are only true of Rama, the fon of Cush. Whatsoever partial objections may be urged against the fystem fystem thus adopted by me, I am convinced that it is the only basis upon which any solid history of Ancient India can be founded; and every fresh inquiry confirms me in that opinion.

Among the various kinds of evidence hereafter adduced in corroboration of my idea, I have appealed to one particular species, of a nature equally curious and remote from common investigation. If it happen that Criticism should point any severe strictures on that portion of my work, I shall think myself exceedingly ill repaid for literary toil, which cost me many nights of painful vigil, and which, from the intense application I was compelled to bestow upon the subject, materially injured my health. It was an attentive and accurate inspection of the Solar and Lunar Zodiacs of India, inserted in the same valuable collection, the former confilling, like that of Egypt and Greece, of twelve constellations, fimilar in order and defignation, except in the figns Virgo and Gemini, and the latter of twenty-feven, refembling the MANAZIL-AL-KAMAR of the Arabians, that first fuggested to me the hypothesis upon which I have bestowed indefatigable pains, and which I shall now curforily unfold. an Thi

That the " ancient history of the illustrious families of Greece, during the poetical ages, might be read in the heavens" was the opinion of the late Mr. Costard, one of the most profound Oriental astronomers ever born out of Afia. But it is a fact notorious, and allowed by all proficients in that noble and wonderful feience, that the Greeks, although they carried aftronomy to a furprifing height of improvement, were not the inventors of it. They borrowed from the Egyptians their knowledge of its principles; and, in their wild ambition to have themselves considered by posterity as the most ancient nation on earth, and their country as the fole fountain of the arts and sciences, they adapted to the constellations, already formed, the various parts of their own fabulous history. Sir Isaac Newton, indeed, in his least perfect work, " the Chronology of ancient Kingdoms amended," has affirmed, that Chiron first formed the sphere for the use of the Argonauts; but even a name fo highly and deservedly eminent as Newton's cannot fanction a palpable error. Dr. Rutherforth, in one of the most ingenious productions on the fubject of natural philofophy that ever was published, has in the clearest manner evinced, that the constellations,

tions, delineated on the sphere, though apparently allufive to the Argonautic expedition, could not possibly be the fabrication of Chiron, or any other Grecian, for that purpose; fince the greatest part of the stars in the constellation Argo, and, in particular, Canopus. the brightest of them, were not visible in any part of Greece; and no astronomer would he fo abfurd as to delineate confellations to direct the course of a vessel, the principal stars in which " could not be feen by the mariners, either when they fet out, or when they came to the end of their voyage."* Although, undoubtedly, many of the figures of the constellations have the appearance of being ancient Egyptian hieroglyphics, yet, that at least those of the Zodiac could not be of genuine Egyptian origin, among other evident proofs which will be hereafter adduced by me, one or two only shall be stated at present. In the first place, they are not adapted to the order in which the feafons succeeded each other in Egypt. For instance, the fign Virgo, which is represented by a young female, with ears of ripened corn in her hand, evidently points to the

I shall, hereafter, have occasion to cite this curious passage of Dr. Rutherforth more at length. It is in the second volume of the Quarto Edition, page 850, Cambridge, 1748.

the feafon of the harvest. Such, in fact, it is in most countries when the sun enters into that fign, that is, in September; but, in Egypt, where the fertility of the country depends upon the annual overflowings of the Nile, and where confequently the concerns of agriculture are both managed on different principles and directed by peculiar local regulations, the period of the harvest is in March; or rather, as Pliny has recorded it, paulo ante Calendas Aprilis.* The same argument forcibly applies to the fign Aquarius, by which are meant the chilling rains of the bleak winter-feafon; whereas hardly any rain at all falls in Egypt, and their winter is the finest season. Hence it is evident, that the Egyptians could not have been the inventors of a form and order of the constellations inapplicable to their own climate, but must have brought a sphere already fabricated for the ufe of agriculture and navigation, from some primeval country inhabited by them, before their migration to the banks of the Nile; and that primeval country, we are informed from the most facred authority, was CHALDEA.

Impressed,

^{*} Plinii Nat. Hift. lib. xviii. cap. xlvii. Aldi edit.

Impressed, therefore, with ideas on the subject, fimilar to those that swayed Mr. Costard's mind; but, at the same time, convinced that the " history to be read in the heavens" neither alluded to the Grecian, nor wholly to the Egyptian, mythology; I have adventuroufly launched into a new region of historical investigation, and have attempted to give, from the ample and recording tablet of the skies, the real history of the first grand family of the post-diluvian world. I have commenced the history of the ancient sovereigns of Hindostan, that is, of the children of the sun and moon, from the ætherial region whence they probably emanated; and a comparison, which I have been enabled to make, of all the Oriental zodiacs, folar and lunar, that could be procured by my refearches into books of antiquity, fully corroborates the fystem upon which I have proceeded. Indeed, fo wide has been the range I have found myfelf compelled to take, of such an extensive nature were the subjects that continually rose and demanded elucidation, that, in the former part of the work, I feemed to be under the necessity of writing, not fo much the History of Hindostan, As THE HISTORY OF ASIA ITSELF, AND OF THE HUMAN RACE IN THEIR INFANT STATE. Without

Without taking this enlarged retrospect of ancient periods, the early history of an empire, undoubtedly one of the first established upon earth, blended as that history is with theological and astronomical speculations, and involved as it is in that of Assyria and Persia, would be totally unintelligible.

While Dr. Rutherforth combats the affertion of Sir Isaac Newton, that Chiron formed the first sphere for the use of the Argonauts in their voyage to Colchis, he yet allows, that many of the constellations of the Grecian, that is, (as Mr. Costard in another treatise has proved,) the Chaldwan fphere, apparently allude to that event; but then he thinks they were fabricated at a period subsequent to its completion, and were intended only as memorials of it. With respect to the event itself, Mr. Bryant, in the second volume of his Analyfis of ancient Mythology, has offered very fubstantial arguments to evince that it never took place at all, and that the whole flory originally arose from some misapprehended traditions relative to the ark of Noah, and the facred personages that attended him on the most important voyage ever recorded. Had Mr. Bryant more frequently directed his attention to that Perfian and Arabian literature which

which Mr. Richardson, in his Differtation on the Languages, Literature, and Manners of Eastern Nations, seems to think he treated with too much contempt, he might have derived a furprifing support to his affertions from many of their astronomical productions. For instance, in Dr. Hyde's translation of ULUG Beg's tables of the fixed stars, the fign Argo is fimply called STELLA NAVIS, that is, the constellation of THE SHIP; and there is reason to fuppose, that, in naming the stars, the royal astronomer of Persia followed some very ancient aftronomical tables, known in his own country; fince, had he copied those of Ptolemy, he would have denominated it, after that writer, Apyes assentuos, the afterism of Argo.

Mr. Bryant has slightly mentioned, from this author, that, by Orion, the Persians usually understand Nimrod, and that an alter formed part of the ancient sphere; but he might have gone farther than this, and, in the signs of the zodiac, and the constellations of the Southern hemisphere in particular, have discovered many other striking circumstances, relative to the early post-diluvian ages. The ample notes, which Dr. Hyde has added to this work of Ulug Beg, upon every one of

the forty-eight constellations, into which the ancients divided the visible heavens, with the enumeration of their feveral Oriental appellations in Chaldee, Hebrew, Persian, and Arabic, with large extracts from the writings of various Afiatic astronomers, exhibit an inestimable treasure of intelligence in this line of science, which feems never before to have been fufficiently attended to by the Eastern antiquary or the historian of Asiatic events. Surely, if the ancient Greeks had the policy to adapt their mythologic details to constellations totally irrelative to their history, the moderns should have the bonefty to restore to the Chaldmans, what it is evident originally belonged to them, and what I am of opinion can be proved to allude to the primitive history of mankind. The whole of the fifteen Southern constellations, probably the first delineated on the celestial sphere, appear to me to afford an illustrative commentary upon, and to yield decifive testimony to, the truth of the ten first chapters of Genesis. For, in memorial of what other events, except of those important ones that engrossed the grateful admiration of the post-diluvian fathers of mankind, were placed in the heavens, first, the constellation of NAVIS, or the fhip: VOL. I.

flip; secondly, ARA, or the altar, with its vast body of fire and smoke ascending near the Triangle, the remarkable Egyptian fymbol of Deity, I mean of the NUMEN TRIPLEX; thirdly, the SACRIFICER, whom the Greeks (for a reason which I shall hereafter explain) denominated Chiron, the centaur; fourthly, the BEAST about to be facrificed, improperly called lupus, fince Ptolemy uses the term Ongres, and the Arabian appellative of the conffellation is translated fera by Dr. Hyde; fifthly, corvus; or the raven; fixthly, crater, or the cup of libation, called by the Egyptians crater beneficus Ofiridis, and I trust that no truth can be more indifputably proved than that which I have laboured to establish in the following pages, that Ofiris and NOAH are the fame. Seventhly, eighthly, and ninthly, with respect to the Canis Major, the CANIS MINOR, and LEPUS, that is, the greater and leffer dog, and the bare, fituated fo near to Orion, the great and iniquitous hunter both of men and beafts; I shall take the li-" berty of inferting the illustrative words of my author himself. Dr. Hyde tells us, the Jews call this constellation, Gibbor, that is, gigas, the giant. He then adds, Propter duas Canes et Leporem quæ funt in vicinia,

poetæ fabulati Oriona fuisse venationis studiosum: isque, in cælo existens, fuerit sicut Nimrod,
Gibbor Sajid, i. e. Gigas, seu Potens venatione coram Domino. In this place I cannot
but dissent from Dr. Hyde, and think there
is far more truth than fable in the supposition that Orion and Nimrod mean the same
person. The whole of the remaining constellations of the Southern hemisphere are,
composed of aquatic objects or animals, and
may be considered as pointedly allusive to
a GENERAL DELUGE, at least as pointedly as
any of the others can be to the expedition of
the Argonauts.

So far Dr. Hyde, in his profound aftronomical commentary upon Ulug Beg, was of use to guide my adventurous step through this dangerous ground, as far as I know, untrodden before; and from this author, and the elegant vertion of the aftronomy of Alfraganus, by the learned Golius, I acquired fuch a knowledge of the Perlian and Arabian aftronomy as enabled me to proceed with increafing confidence in this complicated inquiry. The Egyptians, however, who, during the revolution of fo many centuries, devoted themselves to the study of this science, and who were fo univerfally celebrated as the most C 2

most expert astronomers in the ancient world, appeared to merit still more attentive examination. Fortunately, in the fecond volume of Kircher's Œdipus Ægyptiacus, there is preserved that invaluable relic of antiquity, the ancient sphere of the philosophic progeny of Mizraim, in many of the fabulous characters and hieroglyphic delineations engraved upon it, totally different from that of the Chaldwans, but still bearing each to the other fuch a general feature of fimilitude, as to demonstrate their originating in the fertile invention of the same race, and their correspondence to the early events of one common country. In my observations upon this fphere, I have remarked, that, though Kircher might be, in some instances, what Warburton represents him, a learned visionary; yet, as he was indefatigable in procuring, from every quarter, the hieroglyphic fymbols of Egyptian knowledge, their genuineness may be depended on, when his conjectures possibly may not. I shall not, however, prolong these pages, by dwelling at present on any particultar instances that might be brought to illustrate the foregoing affertion, but shall pais on to the curfory confideration of one or two remarkable circumstances that struck my eje

in

in reviewing the folar and lunar zodiacs of India: in the former of which there is, in my opinion, a strong corroborative testimony of that deluge which the Brahmins fo peremptorily deny ever to have taken place in Hindostan. It is in the fign Virgo, who, as Sir William Jones observes on that zodiac, " is drawn, standing on a boat in water, holding in one hand a lamp, and in the other an ear of rice-corn;" * circumstances which equally recall to our remembrance the Egyptian Isis and the Eleufinian Ceres, with the nocturnal gloom in which their rites were relebrated; as they do the awful event, which I have united my humble efforts with Mr. Bryant to prove those rites depicted.+ With respect to the NAC SHATRA, or Mansions of the Moon, which form the Lunar Zodiac, it is possible that the argument I have brought to prove that this very curious mode of measuring out the heavens, fo totally foreign to, and unknown in, all the systems of European aftronomy, originated among the aftronomers of India, may be thought decifive: viz. that it could not be borrowed from Chaldrea or Arabia, because the Lunar Zodiac of India confilts.

. See the Akatic Refearch's, vol. ii. p. 292.

⁺ See vol. ii. of these Differentions.

fifts, and ever did confift, of twenty-feven manfions only; while, according to Coftard, that of Chaldaa, and, according to Hyde, that of Arabia, have ever contained twenty-eight mansions, besides the curious catalogue of animals and objects, almost all of them peculiar to India, by which those mansions are. distinguished, such as the head and teeth of. the elephant, facred conques, an instrument used in their temples, and Indian tabors, affords additional proof of this affertion. One, however, of the afterisms of that zodiac is not so peculiarly Indian, fince we find among the number an oblation to the gods, noticed before; which I as firmly believe to be allufive to the offering of Noah when he descended from the ark, as I am convinced the twofaced image, delineated on another, does to Noah himself, the only true Janus Bifrons of the ancient world. However, in my history of the three first Indian Avatars, I have been able to adduce far more decifive evidence, relative to the general deluge, than can be collected from any symbols, or displayed in any hieroglyphics whatfoever. Nothing but the abstruse and intricate nature of the subjects concerning which it treats could have prevented, long ago, the appearance of that volume,

in which all these particulars are enumerated; but, as I have now toiled through the most difficult part of it, the comparison of the se-veral Eastern systems of the Cosmogony; and as nearly three hundred pages of it are already printed off; the public may expect the first volume of my history, with elegant engravings of some of the principal Avarance and inscribed, where gratitude distates, to the Court of Directors, in the course of

the enfling year.

One principal inducement, next to the higher motives, explained above, for entering into this wide aftronomical range, was the anxious wish by this means to throw light upon the obscure annals and involved chronology of ancient India, an object which has been effectually obtained by it. To that important point I have directed all the scattered rays of information, which I could collect in the course of these researches; and, although I have by this means been enabled, I trust successfully, to combat the claims of the Brahmins to fuch stupendous antiquity as that infifted on by them, yet have I not neglected, at the same time, to substantiate every just and well-founded claim the Hindoos can urge to fuperiority, either in regard to their early civilization, CA

civilization, or their rapid progress to perfection in arts and sciences, when those assumptions do not militate against all the received opinions and traditions of mankind. Notwithstanding their absurd geographical notions which the reader will find exhibited, from Sanscreet authority, in a future page of this volume; yet there is every reason, from the doctrine of the leven superior Bobuns, or purifying fpheres, through which they fupposed the transmigrating soul to pass; and from the CIRCULAR DANCE, in which, according to Lucian, in his Treatife de Saltatione, they worshipped the orb of the Sun; to believe they had, in the most early periods, discovered that the earth in form was Spherical, and that the planets revolved round the fun. Besides the knowledge of the true folar fystem, which Pythagoras most probably learned in India, there is every reason to think that they were acquainted with fpherical trigonometry, and that fomething very much like the Newtonian system of attraction and gravitation was known among them. Indeed, Sir William Jones feems to confirm this, when he informs us, that " the works of YA-VAN ACHARYA are faid to include a sycem of the universe, founded on the principle of AT-TRACTION.

TRACTION, and the CENTRAL position of the fun," which I think it is far more likely Pythagoras learned of this philosopher in India, than this Brahmin of Pythagoras in Greece; for, to have gone thither, he must have renounced the felf-fufficient character of that haughty tribe, and have violated a leading precept of the religion and policy of Brahma. This very early knowledge of the great fundamental principles of aftronomy feems to be incontestably proved by a passage, which immediately follows in the third discourse of Sir William Jones, " that the names of the planets and zodiacal stars, which the Arabs borrowed from the Greeks, are found in the oldest Indian records."* In short, while I have anxiously endeavoured to do justice to the fuperior claims to credit of the Mofaic syftem, I have been careful not to do the Brahmins injustice. I have that kind of partiality which every historian possesses for the nation whose history he is probably induced by that very partiality to record; but, I trust, it has feldom misguided my judgement, and in no inflances fallified my narration.

Our path, thus cleared through the mazes of ancient astronomical mythology, and the history

[·] Affatic Refearches, vol. i. p. 430.

history of the TEN AVATARS, or descents of Veefhnu in a human form, which feem to be of a fimilar nature with the TEN SARI of Chaldra, and the TEN SEPHIROTH of the Hebrews, extensively explained, the ferious body of classical history will commence towards the middle of the first volume, with an account of the fuccessive irruptions of the Affyrians, the Perfians, and Grecians, into that beautiful country, the delightful furvey of which has, in every age of the world, awakened the envy, inflamed the jealoufy, and stimulated the avarice, of neighboaring despots. The alternate operation of these base and degrading passions has too frequently contributed to cover the most fertile plains which Afia can boast with sterility, and deluge them with the blood of the innocent natives. Of the plan upon which this portion of the enfuing history, taken from the classical writers of Greece and Rome, and the Persian and Arabian historians, will be conducted, an ample profpectus is given in my Letter to the Directors of 1790: to that Letter I must refer the reader, and he will there find an abridged account of most of the authors, Oriental and European, cited in the course of the History

History. I have neglected no means in my power of making this work a complete analyfis of Indian history. I have penetrated to the fountain-head of all authentic intelligence which concerns that region, and, commencing my narrative at the remotest known æra of great national events, have brought it down to the latest that can at all deserve the notice of regular history; even from that Semiramis, whom Diodorus describes as pouring her millions upon its ravaged frontiers, to that difastrous moment, when, according to the recent relations of Mr. Frazer and Sir W. Jones, the fanguinary usurper of the throne of the SEFI's planted the standard of Persia upon the battlements of DELHI.

To an undertaking thus comprehensive in its design and important in regard to its objects, an undertaking generally allowed to be, at this moment, a desideratum in literature, it might naturally have been expected, that not only the Court of Directors themselves, who, in fact, manifested by their resolution so early and so flattering an attention to the address of the author; but that all those gentlemen in their service, or otherwise, who from situation or connection could not be indifferent to Indian concerns, would

have extended their powerful support and patronage.

It was not unreasonable to suppose that the man of bufiness would be interested by the faithful detail professed to be given of commercial transactions during so many revolving centuries, and that the man of letters would be induced decidedly to support a production recommended by a circumstance equally novel and gratifying; that in one work, of small expense, was to be combined the fubstance of all the most esteemed Persian and Arabian historians upon the subject, of whose productions correct and elegant versions have been yet presented to the public; productions mouldering upon the shelves of public libraries, or deposited in the inaccessible museums of learned individuals; productions equally high in value and difficult to be procured.

For myself, conscious that I had, by continued inquiry, by extensive reading, and intense application, endeavoured to prepare myself for the important task in which I had engaged, I too eagerly indulged those fanguine expectations of success, which were entertained by the private circle of my friends. Enjoying from nature a very ample portion

of those high and volatile spirits, which as they are often in early youth the occasion of many errors, afterwards regretted, fo in riper years they too frequently buoy up with false hopes the deluded imagination; I suffered those spirits to betray me into the most fatal delutions. I exulted in the fair prospect that a life early marked by the viciflitudes of fortune, or rather continually passed in the extremes of gay hope and gloomy disappointment, as it approached its meridian, was likely to be cheered with the dawn of fuccess and a share of probable independance; that fome moiety of the public applause would be the consequence of incessant efforts to merit it, and that an adequate portion of emolument would be the reward of fevere literary toil. I therefore embarked, in the purchase of the various books, charts, and engravings, necessary for the composition or elucidation of my work, a considerable part of a small fortune, which fell to me by the untimely death of a near and beloved relative, and, as I was fettled in the country, remote from the convenience of a public library, and was constantly in want of many expensive publications in regard to India, which, indeed, from their

their recent date no public library could furnish, I continued to accumulate expenses of this kind, till a fense of prudence compelled me to refort to the bookfeller to know the refult of the distribution of my proposals and the publication of my advertisements. Let it for ever repress the ardour of romantic ambition and the enthuliaftic dreams of authors unknown to fame, and unprotected by patrons invested with the ensigns of power and stationed at the helm of political eminence, that, in the course of twelve months, THE HISTORY OF HINDOSTAN, a work fanctioned by the approbation of THE EAST-INDIA COMPANY in England, and SIR WILLIAM Jones in India, was able to obtain only a dozen subscribers! - It was not, however, a little flattering to the author, that amongst that number of unfolicited fubfcribers was the Marquis of Lanfdown, who fent an agent to inquire concerning the author, and to express his Lordship's hope that " so meritorious a work might not fink for want of proper fupport." His Lordship could only form a judgement of its possible merit from my Letter to the Directors; of which I printed a thousand, at the expense of Forty Pounds, and

and have fince been obliged to distribute them

However deeply wounded were my feelings at this, I truft, unmerited neglect, especially from those high and eminent persons, to whom I was from good authority informed that a Hiftory of Hindoltan, upon an enlarged and comprehensive scale, would be of. all things the most acceptable; they were ffill more deeply goaded, when, unwilling to wenture farther in an undertaking that feemed to threaten total ruin to any individual, two or three of the most respectable booksellers, to whom I immediately offered my work, declined having any thing to do with a production which, it was predicted, the superior pen and the transcendent abilities of Dr. ROBERTSON would not fail to crush in the embryo.

To names exalted into celebrity by the veneration of vulgar ignorance and the clamour of popular admiration, always violent but seldom just, the mind, accustomed to think independently and liberally, disdains to pay unmerited homage. But to a name so deservedly eminent as that of Dr. Robertson, I bow with submission proportioned to the real respect which I entertain for his writings

and

and his virtues. Had his Historical Disquifition at all appeared to me to render unnecessary an undertaking, proposed to be conducted on a far more extensive scale, I should certainly have paid that deference to bim, which I deem it not necessary to pay to others, and have relinquished the field to fo able a writer of History. But, fince our undertakings can by no means be faid to clash, and are executed on principles widely different, I trust my perseverance will not be imputed to improper vanity, nor mistaken for idle competition. The field is open to all, and the range is ample. If it should not be in my power to obtain the first laurel, a second, and no ignoble palm, may yet be mine.

Disappointed in my hopes and injured in my property, my work treated with contempt by some and with neglect by others, I still relaxed not from the vigorous prosecution of it. I selt that the active spark of honest ambition, enkindled in my mind, was far from being extinguished; nor was I entirely deserted, at this trying criss, by those constitutional spirits which I have sometimes found to rise in proportion to the preency of adversity; and which, amidst the various scenes of a chequered life, have often enabled

abled me to trample on greater difficulties than even these.

In spite therefore of menaced ruin both to reputation and fortune, I determined to perfevere; and, commencing those strenuous exertions, which I had hitherto neglected to make, in the hope that a work, fo generally deemed a Defideratum, would make its own way, the scene became suddenly and agreeably changed. The friends who yet remained to me at Oxford were not deficient in their endeavours to ferve me; and I was repeatedly told to look to the Seat of Science for that support, with which it was humbly hoped an effort in literature would be honoured. The instant that my views were candidly stated, and the real object of this historical investigation came to be more generally known, I had no reason to complain of a want of due encouragement from men of learning and distinction.

Dr. WETHERELL, the Master of University-College, ever anxious to promote the interest of those who have been educated at the College over which he has so long and honourably presided, on my application to him, readily and warmly espoused the cause of my book. I had soon the happiness of proving that characters.

Vol. I. D racters

racters fo eminent in the path of genius and erudition, as are Dr. PARR and Sir WILLIAM Scott, were by no means indifferent to the fuccess of their former pupil; fince they at once animated my desponding mind by commendation, and, by their personal exertions, promoted the fuccess of my work. The refult of these united efforts of my friends, to prevent a publication, which they thought meritorious, from being entirely laid afide, is evident in the respectable, though not numerous, lift of fubscribers with which I was honoured; which, however defective in names, celebrated in the records of Indian fame, contains many illustrious by rank, eminent in talents, and distinguished by private worth. They are indeed fuch names as must reflect lustre on any publication, and it shall be the unceasing study of my life to merit such exalted patronage.

In respect to the general neglect with which the undertaking, in which I have embarked, has had the misfortune to be treated by those gentlemen, to whom, from their connection with that country, it might be supposed a History of India, upon a more extended basis than what I originally proposed, would be highly acceptable; it is far from my wish to think with sentiments of acrimony, or resort

the language of contempt. Were I indeed inclined to retaliate, opportunity might not be wanting, in the future pages of this History, to launch forth into the ufual strain of inflamed invective against the enormities afferted to have been committed in India, by certain characters, equally hostile to literature and freedom, who are supposed to have grown rich by the plunder, and iplendid by the beggary and massacre, of their fellow-creatures. By an author inclined to indulge a fatirical vein, an infinite deal of eloquence might again be displayed in painting a vast continent deluged with blood, and in bemoaning the untimely fate of millions expiring in the pangs of artificial famine. Eloquence and truth, however, do not always unite in the fame page. Whatever real foundation there may be for believing that some dark transactions of this kind have taken place in India, in those remote regions where the restraining arm of the fupreme executive power could less effectually check extortion, and where the difinterested generofity of a late chief governor could be less conspicuously visible; it is a fact notoriously evident that these accounts have, in many respects, been enormoully

moully magnified. This work will be conducted upon principles very diffimilar from those which differinate calumny and point invective. I have declared, in my neglected Letter to the Directors, that I will endeavour to fulfil the character of " AN UPRIGHT AND IMPARTIAL HISTORIAN, TOTALLY BREE FROM THE VIOLENCE OF PARTY, WITHOUT THE TEMPORISING SERVILITY THAT DISGUSTS. AND THE INTEMPERATE ARDOUR THAT OF-FENDS." . It is my intention steadily and invariably to adhere to that line of conduct: and though usurpation and tyranny, arrayed in imperial purple and gorgeous in the spoil of nations, ought never to enjoy their illgotten grandeur uncenfured by the warning voice of history, that centure should be manly, open, decifive, and pointed rather against the offence than the individual. In fact, however, during the extensive review which I have been obliged to take of the fuccessive transactions of Persians, Tartars, Venetians, Portugueze, Dutch, French, and English, with the Indrans; the proceedings of the latter, except in the instance of a few daring and unprincipled individuals, whose extortions no incorporated affembly of merchants, however inflexibly

flexibly virtuous themselves, can ever wholly prevent, have appeared to me to be by far the most candid, the most upright, and the most irreproachable. Such are my real fentiments, and I unfold them without the remotest idea of flattering or offending any creature breathing, either in Afia or Europe.

I am willing to believe that this neglect has arisen from the apparent plausibility of an argument, which either jealous competition or inventive malevolence has thought proper to advance in regard to this undertaking, with far more pertinacity than truth. What, these rash calumniators have urged, either novel or interesting, can possibly be expected from an author who has never vifited the remote region which he professes to describe; who has never on the spot examined the annals he undertakes to detail; nor conversed with the people whose history and manners he records? To this objection I trust the following, with every candid mind, will be a fufficient anfwer.

It was the good fortune of M. SONNERAT and M. NIEBUHR to have vifited, in person, the scenes which their accurate and entertaining volumes describe; but they travelled with peculiar advantages, and at the expense of royal

D 3.

royal munificence.* What they faw they faithfully described; and mankind are highly indebted to them for their labours, nor have I in particular failed to profit by them; but let it be remembered that a knowledge of Indian Antiquities was not to be gained by a transient visit to the traders on the coast of Coromandel or Malabar; nor, had it been possible to penetrate even to Benares, are the Brahmins of that celebrated univerfity able fully to explain the principles of their own theology and fciences. This is particularly true in regard to their astronomy, since they are ignorant of the right application of those stupendous instruments, described for accurately by Sir Robert Barker, in the Philosophical Transactions. Besides, when we daily meet with so many who have penetrated even into the regions of Upper Hindostan, who both know so little and have written fo abfurdly about India, this objection, methinks, should have been urged with

The numerous and explanatory engravings, in the expensive volumes of their travellers, have infinitely contributed towards the elucidation of the Indian Antiquities. Without those of Niebuhr, it would have been impossible to have given any correct idea of the figures at Saliette and Elephanta; and, without those of M. Sonnerat, the History of the Ten Avatars would have been scarcely intelligible. I have presented my subscribers with one beautiful plate from each of those writers.

with somewhat more caution and temper. Upon the whole, therefore, nothing could be more unjust or cruel, than for these ungenerous critics, on so slender a foundation, prematurely to condemn and decry a work, of the composition of which they must be utterly unable, from a superficial survey, to comprehend either the arduous toil or the complicated difficulty. However, I trust, in vindication of my own injured reputation, and the persevering zeal of my friends, that in every page of the following work the reader will find a better answer to this objection than any in my power in this place to produce.

There is likewife another objection which has been urged against this work, and from the consideration of which I will not shrink. "The author," it has been faid, " is not acquainted with the Afiatic languages." On this subject, let the words of Sir W. Jones be remembered, that "languages are not science, but only the medium through which science is conveyed." This remark comes with peculiar force from an author, who is, perhaps, the greatest master of languages in the world; and if correct versions, such as those with which himself and Mr. Wilkins have obliged the public, from the Sanfcreet, and fuch as Pocock, D4

éock, Golius, and Greaves, have given us of Persian and Arabian historians, can be procured, who is there that would waste the vigour of life in the learning of languages, from which, after all, the information to be reaped will fearcely compensate the toil? Could translations, to be depended upon, be obtained in fo extensive a degree as I may require for the conduct of this History, I can assure the reader that the hieroglyphic characters in which Eastern literature is veiled, for me, should remain undisturbed. That not being entirely the cafe, I am flowly endeavouring to accomplish what Sir William, at my entrance upon this undertaking, recommended to me; " to acquire a sufficient knowledge of Persian to enable me to give a new translation of Ferishtah;" a work, he adds, greatly in esteem among all Indian scholars, but of which Mr. Dow's translation is a very loose and imperfect one.

Hitherto, however, I have had subjects far more important to attend to than the mere acquisition of languages; and, when the reader shall consider the numerous difficulties with which I have had to contend, in writing the Indian Antiquities; when he shall reslect, that I had to read, to digest, and to compose, what is thus offered to the public, from an infinite va-

riety of books, which it was often necessary to ride from Woodford to London to procure, and even then not procurable, but by tedious research among the booksellers shops, and at a very considerable expense; and that the topics upon which I have written are both very abstruse and very remote from the common line of literary investigation; he will, I trust, permit candour to predominate over severity, and instead of wondering that so little, he will, perhaps be surprised that so much, has been accomplished.

I can indeed fafely affirm, in the words of the honoured patron of my juvenile productions, the late Dr. Johnson,* that this work

WAR

My mentioning in these terms the venerated name of the late Dr. Johnson will not, I trust, be called prenumption. — There are those living who can atteit the handsome manner in which he always spoke of two very early, but very different, productions of mine: The School-Boy, written, when at school, in imitation of The Splends School-Boy, written, when at school, in imitation of The Splends School-Boy, written, when at school, in imitation of The Splends School-Boy, written, when at school, in imitation of The Splends School-Boy, written, when at school, in imitation of The Splends School-Boy, written, when at school, in imitation of The Splends School-Boy, written, when at school in imitation of The Splends School-Boy, written, when at school in imitation of The Splends School-Boy, written, when at school in imitation of The Splends School-Boy, written, when at school in imitation of The Splends School-Boy, written, when at school in imitation of The Splends School-Boy, written, when at school in imitation of The Splends School-Boy, written, when at school in imitation of The Splends School-Boy, written, when at school in imitation of The Splends S

Indeed I cannot forbear flating a circumstance peculiarly honourable to myself, and illustrative, at once, of the natural goodness of his heart. At my entrance into orders, he wrote, unsolicited by me, a warm and friendly letter, to the Master of University-College, in my favour, with the proffer of a lucrative cure " if Mr. Maurice were in orders;" of which circumstance he was ignorant. was "written with little affiftance from the learned, and without any patronage of the great; not in the foft obscurity of retirement, or under the shelter of academic bowers, but amidst inconvenience and distraction, in fickness and in forrow." I had scarcely commenced my historical career, before I was called, upon an occasion the most distressing to human feelings; to exchange the blooming plains of Asia and the banks of the Ganges, where I began, in imagination, to range with delight, for the rugged rocks and Lethean stream of Briffol-Wells. It was, indeed, an occasion no less painful and distressing than the fight of diftinguished worth, heightened by unaffected beauty, in the bloom of youth, flowly descending to the unfruitful grave. No sooner was that melancholy event over, for which the too much honoured lines, in the Church-Yard of Woodford, * feebly attempt to display the genuine

norant. I wat, at that time, in orders, and fixed at Woodford, which particular reasons prevented my relinquishing for Bosworth, the living of his friend Dr. Taylor. The Master was so obliging as to send to me, to Woodford, Dr. Johnson's letter, which I keep as a stattering memento of his friendship, and a striking proof, among others, of his enlarged philanthropy.

As a part of these verses, very inaccurately transcribed, has appeared in the public papers, I shall make no apology for inserting

genuine grief of the writer, than the circumftances of vexation and disappointment, above recapitulated,

ferting them below more correctly and annutilated. I can affure the reader that, in doing this, I have no wanity to gratify. To compose them was the most painful task (a task enjoined, near the close of life, by the amiable deceased) that even agonizing poet undertook. In presenting, them to the reader, however, I own I have some ambition to gratify. I am ambitious of paying a public tribute of respect to worth, untimely snatched away, and sense early matured; and, if these volumes, by good fortune, should reach posterity, may her name and memory, that must ever be dear to virtue and to truth, descend with them, and consecrate the page.

EPITAPH OR A LADY.

SERENELY bright, in bridal smiles array'd! The purple fpring its bloffom'd fweets display'd; While raptur'd fancy faw full many a year, In blifs revolving, urge its gay career. ---But, ahl how deep a gloom the fkies o'erspread; How swift the dear delutive vision fled! Discase and pain the ling'ring hours consume, And feeret feed on youth's corroded bloom. Ceas'd are the fongs that fill'd the nuptial grove, The dance of pleafure in the bow'r of love -For Hymen's lamp funereal torches glare, And mournful dirges rend the midnight air! Oh! thou, whose cheek, the rival of the rose, With all the flush of vernal beauty glows, Whose pulses high with youthful vigour bound, The brightest fair in fashion's mazy round, Approach with awe the manfions of the dead, And, as the grave's drear bourn thy footheps tread, Mark - 'midft these ravages of fate and time -Where woar H lies buried in its loveliest prime;

Where

recapitulated, fuccessively rose to throw an additional shade over the remainder of a life, which seems doomed to be passed in extremes.

I have no intention, in recapitulating these disagreeable particulars, to excite the compassion or disarm the severity of the public censors, who are now to pass judgment upon this work, but only mention them as the best apology

Where yourn's extinguish'd fires no longer burn, And BEAUTY flumbers in the mould'ring urn! Oh! paule - and, bending o'er fair STELLA's tomb, Mourn ber hard lot, and read thy future doom! Soft lie the fod that thields from wint'ry rains And blatting winds my STELLA's lov'd remains: May angels guard the confecrated ground, And flowers, as lovely, bloom for ever round! Meek fufferer - who, by namelels wees oppress'd, The patience of th' expiring Lamb poffels'd; When, many a tedious moon, thy fever'd veins Throbb'd with the raging HECTIC's hery pains, Nor heav'd a figh - fave that alone which bore Triamphant virtue to a happier shore -STELLA, whole fireaming eye ne'er ceas'd to flow When forrow pour'd the plaint of genuine woe, Whose mind was pure as that unfullied ray That beams from heav'n, and lights the orb of day; Sweet be thy flumbers on this mosfy bed, Till the last trump shall rouse the sleeping dead; Then, having nought from that dread blaft to fear, Whole echo-shall convulte the crumbling fphere, In fairer beauty wake - a heav'uly bride, And rife an ANGEL, who a MARTYR died!

apology I can offer for the LONG DELAY in presenting the public with the two first volumes of Indian Antiquities, which ought to have made their appearance in the course of last year. The public tribunal is an awful court, and I approach it with all the diffidence which a first effort, by an unaided individual. towards executing an extensive literary work, cannot fail of inspiring; but I know the judges, prefiding at that tribunal, are neither to be foothed by entreaty nor intimidated by menaces. It is in vain, if unmerited, to hope for the favour of the public; or to divert its cenfures, if deferved. "I have now fet my all upon a cast; and I must stand the hazard of the die."

Having thus far confidered the objections that have been made to this work, I must beg leave, before I conclude these introductory remarks, to mitigate the force of one or two that may be urged against it. The first, and not the least formidable, will probably be pointed against the orthography of the proper names of Indian persons and places. This I own is one of the greatest difficulties which an historian of Asiatic events has to encounter; for, to attempt always to give them with undeviating correctness, is to attempt little less than

than an impossibility. When I first commenced this history, I had resolved to follow the example of those who have endeavoured to write every Indian word exactly as it is pronounced in India; and the Dictionary of Mr. Richardson, in which the author, as he himself informed me, followed the orthographical instructions of the late Major Davy, Persian Translator to Mr. Hastings, seemed to be the most certain guide. But to Major Davy's fystem, I afterwards found material objections were made, in the Differtation of Sir William Jones, on the orthography of Afiatic words, which so properly ranks foremost among the valuable papers in the first volume of the Afiatic Refearches; and I have fince, in general, adopted his own method, and those of Mr. Halhed and Mr. Wilkins. But the profound observations in that treatife, concerning the Sanfcreet language, and the proper modes of writing it in Roman letters, as well as many other remarks on this abstruce fubject, by the latter gentlemen, will be exhibited to the reader in the Differtation on the LITERATURE of the Hindoos. In the Geographical Differtation for the most part, and throughout the whole of my History, when names of places occur, I have constantly used the

the mode of orthography adopted by Major Rennell, who is undoubtedly the best judge of what, in that respect, is most proper. I fay, in the Geographical Differtation, for the most part, because, in abridging the geography of the Subahs, I was compelled often to adopt the language of Mr. Gladwin, the translator, who feems fcrupulously to adhere to the maxims of Major Davy. . The reader will therefore find, in that Differtation, a variety of orthography which I cannot approve, but knew not well how to avoid. It was the Differtation first written, and under the general impressions of the private advice of Mr. Richardson, " to write the words as nearly as I could learn, both from his Dictionary and general information, that they were pronounced;" but as that pronunciation itself is various in different parts of India, and even among Indian scholars themselves, my only certain guide in this dangerous path . was, to keep as close as possible to the general rule of orthography, and to make Mr. Orme, and other authors of the highest repute, my examples. In observing this rule, it was hardly possible for me to err materially, or beyond the extension of candour, in a point so dubious and perplexing. Achar, however, will fometimes,

fometimes, with all my vigilance, occur for Akber; Shaw for Shab, and Cown for Khan; to which mode of writing those appellatives, I have now thought it expedient wholly to conform: because, though Major Rennell writes Acbar and Acbaree, yet, as I constantly quote the Ayeen Akbery of Mr. Gladwin, in the notes to my history, it seemed absurd to have Acbar, in the text; or Shaw and Cown above, while I cite the Nadir Shah of Sir William Jones, and Abulgazi Khan, the Tartar historian, at the bottom of the page.

But, possibly, not against mere words alone will the artillery of criticism be discharged. The general style which I have adopted, in writing the History of Hindostan, may also provoke censure, and these pages may be thought to abound too much with those defultory shetorical slourishes, so common, and often so disgusting, in Asiatic productions.

As this objection tends peculiarly to wound certain poetical feelings which it is my miffortune to possess, I request to be heard upon

it with patience and lenity.

Devoted to poetry in my earliest youth, or, rather, lisping numbers from the cradle; I pursued, till within these few years, that delightful but barren path of literary amusement.

ment. It has happened too that what my poetical exertions have produced has not been fo fortunate as to attract the public notice. Amidst continued and universal neglect, however, it is still matter of honest triumph to me that the few detached pieces, in that way, which I have written, have received the warmest tribute of applause from men who would equally disdain to flatter or deceive; from men upon whose sterling judgment and upon whose unadulterated taste I dare to rely; from men who know and feel the difference that fubfifts between the nerveless fing-fong effusions of the day, and that sublime, energic, manly, Poesy, that strikes with the force of electric fire, and seizes upon the captive heart. - It is possible, therefore, that the Muse, the bewitching enchantress of my juvenile days, that Muse whose fmile I fo long and so ardently courted, may have in fome degree corrupted my style and vitiated my taste in this respect. Indeed, it is an adage of great antiquity, that " No poet ever yet excelled in profaic composition," and I have not the vanity to hope that adage will be overturned by the pages of this book. Let it, however, be candidly confidered that this is only a first essay towards any considerable VOL. I. E publication

publication in that line of writing, composed amidst the pressure of domestic calamity and professional avocation, amidst the suggestions of misrepresentation and the jealousy of competition, amidst multifold discouragement and aggravated disappointment.

- Application, perseverance, and a mind more at leifure to restrain a luxuriant pen and lop off the redundancies of my style, may contribute to render my next volume more worthy of the public eye. Happy shall I be if the FEW, who read and approved my early efforts in a branch of composition which I shall foon renounce for ever, may extend a fimilar degree of candour to my first effort in the line of history. I will, however, be ingenuous with my fubscribers; for I frankly confess that, of India, a country where Nature has ever wantoned as in her lovelieft prime, and thines forth arrayed in her richeft attire; of INDIA, a country renowned through all ages for the eloquence and wisdom of her fons of the line of BRAHMA; for the martial bravery of her rajahs of the house of Keh-TREE; for the prodigies of exquisite art, and manufactures of beautiful fabrication produced by those of the tribe of Bice; as well as for the patient and unrepining gentleness,

gentleness, amidst accumulated insult and oppression, of the industrious and numerous family of SOODER; I never intend to write a history unanimated in sentiment or undiganified in diction. How, indeed, was it possible to write with frigid indifference of the land of elegant fiction and beautiful allegory? -Has not M. Sonnerat, - has not Sir William Jones, - has not M. Raynal, - in short, have not all the preceding writers on this fubject, who have posselled any spark of animation to feel, any nerve of language to express those feelings, or any glow of genius to impress them on the breafts of others, 'alternately launched forth into the warmest strains of admiration on the furvey of the virtues, learning, fortitude, and industry, of this innocent and feeluded race of men?

Let it be farther remembered, in mitigation of the error of a style somewhat, I own, too lofty and luxuriant, that some of the most important and animating subjects that can possibly be discussed have, in the course of writing these pages, successively arisen for consideration—the purest, the sublimest, system of theology, next to the Jewish and Christian, ever established upon earth; and, when degenerating into idolatry, branching out either into

the

the most splendid rites of the most elevated superstition - the MITHRATIC devotion - that is, the worship of the Sun and shining Host of Heaven: or else assuming the most gloomy habit in which that Superstition can possibly array herfelf, in which the terrifies mankind into the WORSHIP OF MALIGNANT DÆMONS and all the accumulated horrors of HUMAN SACRIFICES. Let it be remembered that the ancient glory of empires fo renowned as Hindostan and Egypt, the stately temples of their gods, and the fuperb palaces of their kings, engage no inconsiderable part of these extended speculations: and that I have been, throughout, occupied in the alternate contemplation of objects the most magnificent in the circuit of nature, " or the most venerable and beautiful in the compais of art. It feemed to me requifite, that the loftiest subjects should be treated of in language more than usually elevated. To have written in colder terms, would have argued either want of capacity,

Or,

I wish, particularly in this passage, to apologize for the manner in which, towards the close of the Geographical Dissertations, I have described the course of the mighty Ganges and the mightier Brahmaroover. But what author could remain unanimated when introducing to the reader's notice objects so little known to the learned of Europe? Objects equally assonishing and magnificent.

or, what I should think far more degrading, have rendered me suspected of insensibility.

It is usual to conclude the prefatory pages of any confiderable work with a grateful enumeration of benefits derived, in the course of composition, from men eminent as scholars, or illustrious by station. But since few advantages of that kind, more than those previously specified, have fallen to my lot, my catalogue of obligations will, necessarily, be not very extensive. It would, however, be the height of ingratitude, were I, on this occasion, to omit the tender of my warmest thanks to WILLIAM MONEY, JOHN HUNTER, and NATHANIEL SMITH, Efgrs. but especially to the latter gentleman, who has long proved himself friendly to the diffusion of Indian knowledge,* for their obliging recommenda-E 3

* It ought to be remembered that both the BHAGVAT-GEETA and the HEETOFADES were ufhered into the world under the aufpices of the same gentleman, Mr. Smith, who has so kindly forwarded the interests of this humbler attempt to elucidate the History and Antiquities of India.

When British merchants thus endeavour to blend the interests of LITERATURE with those of COMMERCE, they throw a lustre upon the distinguished station which they enjoy; a lustre which wealth alone, however ample, or honourably obtained, can never bestow. They bring to our remembrance the days of those celebrated Caliphs of the East, equally distinguished for their love of literature

tion of my undertaking to the Court of Directors, in 1790, by which it received the fanction of a patronage which has been of material fervice to this infant work, and, I hope, that the patronage thus liberally extended will not be found to be degraded in the execution of it; especially when the abstruse nature of many of the subjects discussed, and the slender sources from which any genuine History of ANCIENT INDIA can be drawn, shall have been candidly considered.

It would be equally ungrateful, were I to forget making the acknowledgments which are due from me to William Godfrey, Esq. as well for the free use of such books as descended to him from his predecessors at Woodford, as for very early encouragement to proceed in these historical researches; the first idea of which originated, during my residence there, in repeated conversations with that gentleman on Indian topics; conversations fraught with

and arms, when Trade and Sciences travelled, fide by fide, through the fultry deferts of Arabia, in mutual quest of riches and knowledge; and heard, with rapture, the poems repeated, which were afterwards suspended in the august temple of the grant mart of Mecca. It is to the eternal honour of this country, that we have not, in every period of its progress to its present prosperity, wanted many a Speed to cultivate, and many a Gresham and Smith to patronize, Science.

with instruction and remembered with pleafure.

To ROWLAND STEPHENSON, Efq. my warmest thanks are also due, for indulging me, in addition to many instances of long-experienced friendship, with the examination of the papers of his upright relation, GOVERNOR STE-PHENSON, who had the honour, in company with Mr. SURMAN, of obtaining from the Emperor Mohammed Furrukhseer, at Delhi, that firmaun by which the East-India Company became entitled, under the fanction of the Mogul Monarchs, before the subversion of their empire, to very extensive commercial privileges. As Mr. STEPHENSON filled a high station in India, during one of the darkest and most fanguinary periods of its modern domestic history, when the tyranny of the SEYDS, those mighty Omrahs, dethroned or murdered five fucceffive fovereigns of the imperial house of TIMUR, I expected, and bave found, material information from the perufal of them. one of the letters of this Gentleman to the Chief of Patna, his fuccessor, he declares it to be the determined refolution of Himfelf and the Council of Calcutta " not to interfere with the politics of the country; but to carry on their trade quietly, and only to defend the COMPANY'S E 4

Company's Estate:" a wife and prudent maxim, which fome may think ill exchanged for others of an ambitious and turbulent kind.*

Such is the stender list of literary obligations which I am under in carrying on this work. If, however, it has not been my good fortune to be favoured with the assistance of eminent living scholars, I have not wanted that of their writings, nor those of the ILLUSTRIOUS DEAD. In proof of this, I now present the reader with a list of such books as I have, at an enormous expense, provided for the completion of the Indian History; and, as I have not always been so accurate in my references as I ought, I shall add their respective dates, particular

After all, however, it must be confessed, that Europe and Asia can never be governed by the same political code. The genius and manners of the inhabitants of the two continents are diametrically opposite; and nations, among whom the restless ambition and violence of individuals, even in private life, are frequently marked with a most fanguinary character, while vice, in the great and powerful, as frequently breaks forth in deeds of public and aggravated enormity, can no more be kept under controul by the mild, the humane, but tardy, policy established in European countries, than Europe will ever submit to be governed by the despotic maxims that prevail so most Asiatic governments. It may with truth be affirmed, that the natives of the British East-India settlements are the happiest subjects in the whole extent of Asia, at least since the overthrow of the mild and patriarchal government of the ancient Hindoo emperors.

particular editions, and the place where they were printed. Such authentic translations as I have consulted I shall ingenuously give; for, in my opinion, useful knowledge is not to be despised, from whatsoever quarter it can be obtained. The list thus subjoined may be of service to others in the pursuit of similar studies; and, by those who are acquainted with the value of some of the volumes enumerated, and the great scarcity of others, may, possibly, be considered as altogether composing no contemptible collection of Assatic History and Antiquities.

From a furvey of the extensive preparations made by me for completing the HISTORY OF HINDOSTAN, the reader must perceive that what I now offer to the patronage of the public will not be the production of a few leifure hours, but of many years of contemplation and study; or, to speak more truly, the incessant labour of a life, of which, some portion of the fleeting moments hath already been fuffered to elapse unimproved; of a life which may possibly be shortened by the toil of composing, if not embittered by the confequences of the expense incurred in publishing, so hazardous a work. I cannot therefore conclude this Address by saying, with my deceased deceased friend Dr. Johnson, that I dismiss this introductory volume with "frigid tranquillity;" since I have much to apprehend from CENSURE, and somewhat to hope from APPRO-BATION.

OF

BOOKS, COLLECTED,

By the AUTHOR,

FOR THE

ELUCIDATION OF THIS WORK.

In the Geographical Dissertations, the books referred to, and occasionally compared, are the following:

Ptolomæi Geographia, Bertii, folio - Amft. 1618

Strabonis Geographia, folio — - Bajii. 1549
Plinii Naturalis Historia, folio - Aldi. 1549
Cellarii Geographia, 2 tom. quarto - Cantab. 1703
Dionysii Orbis Descriptio, ellave - Londini, 1688
Varenii Geographia Gen. ollavo - Gantab. 1712
Bocharti Sacra Geographia; seu, Phaleg. Frankfort, 1674
Bocharti Sacra Geographia; seu, Canaan, Frankfort, 1681
Abul Fazil's Description of the Indian Subah's in the
third volume of the AYEEN AKBERY, 3 vol.
quarto Calcutta, 1784
Abulfedæ Chorasmiæ et Mawaralnahræ Descriptio,
Editore John Greaver, - Lond. 1650
Antiquité Géographique de l'Inde, par M. D'Anville,
quarto - Paris, 1775
Eclair-

Eclaireissemens Géographiques sur la Carte de l'Inde	
par Mr. D'Anville, quarte - Paris	175
Geographise Veteris Scriptores Græci Minores, per	
John Hudson, 4 vol. cetavo - Oxon	1711
Arriani Periplus Maris Erythæi - Oxon.	169
Memoir of a Map of Hindoftan, by Major Rennell	
quarto Lond,	1788
Memoir of ditto, corrected and enlarged, quarte, Lond.	179
Short History of Asia, by Sir William Jones, prefixed	
to the Life of Nadir Shah, oftavo - Lond	177
#	-
To complete this collection of Indian Geography was u	anting
the Nubian Geography, by the Shariff Edrifi, which, wi	afortu-
nately, no refearch of mine could procure.

ADDENDA, relative to the MAPS and EN-GRAVINGS, with which the two first Volumes of Indian Antiquities are decorated, respectfully addressed to the Patrons and Encouragers of this Work.

WHEN, in the year 1790, I first laid before the public proposals for the ensuing Hiftory of Hindostan, my intention was to adorn the work with only an occasional map, illustrative of its ancient and its modern geography. At the fame time, induced folely by the confideration of making it more generally useful, I intended and hoped to have compressed the vast mass of events, transacted during the period of at least three thousand years, into the small compass of three octavo volumes, with a concife introductory differtation on the geography, the theology, and the laws and customs, of the Hindoos, prefixed to each volume. Under the influence of the fame impressions, I fixed the price of subscription for the undertaking at the moderate fum of ONE GUINEA. In vain, however, did I attempt to execute the work upon that contracted and economical plan. I foon found F 4

found that the brevity intended to have been adopted was totally incompatible with the various, the extensive, and important, subjects, which I had undertaken to elucidate; and that, had I strictly adhered to the literal tenor of the original proposals, the unavoidable consequence must have been, that an additional and ten-fold obscurity would have veiled subjects, already of themselves sufficiently dark and intricate. Dr. Johnson's description of the sublime genius of Shakespear, who, like the Indian Brahmins, foared far above vulgar conceptions and the received traditions of mankind, seemed, to me, very applicable to the genius of Sanscreet History.

Existence fees it spurn her bounded reign, And panting Time toils after it in vain.

Upon explaining to my friends the difagreeable dilemma in which I had been plunged, by my defire to accommodate them with a work in which economy and utility should be united, it was their decided opinion, that the original plan was too contracted, and the proposed price of the production far inferior to the importance of the subject; that perspicuity ought not to be facrificed to unnecessary brevity; and that, while books made use of in the elucidation only of this work were vended at the high prices of five, ten, and fifteen, guineas, the price of the work itself ought to bear some proportion to the expenses incurred during its progress to completion. - In confequence of this advice, I enlarged the original plan, and finding, on a subject so novel, yet so interesting, as the mythology of Hindostan, that abstruse but interesting topics continually rose for explanation, which greatly interrupted the progress of the historical detail, I determined to amplify the introductory portion of the work, and write diffinct differtations upon the geography, religion, laws, and literature, of the Hindoos, into the body of which all extrancous matter of that kind, distinct from the regular history, but by no means unconnected with it, might be thrown, and which might be occasionally and easily referred to. But here a new and most perplexing difficulty arose: while I daily advanced more deeply into the OCEAN of Hindoo mythology and sciences, subjects so uncommon, and indeed, in some instances, so improbable, successively pressed for discussion, that the force of language could not fully elucidate them, nor the most solemn attestations of the most authentic travellers

vellers give them the stamp of credibility. I was therefore, to illustrate the ideas I wished to convey, compelled to have recourse to the power of another science, and Engraving came in aid of her sister Mythology.

The curiofity of the reader, it was supposed, would be, doubtless, instanced to contemplate that stupendous bust of the triple deity of India, in the cavern of Elephanta, which forms the frontispiece, and of which, according to the most accurate delineator, Niebuhr,* the height is thirteen feet; the length of the centre face, alone, is five feet; while the breadth, between the shoulders, expands to the enormous amount of near twenty feet. Even the relation of these dimensions, in company, particularly, of those of the stupendous erections by Sultan Akber, at Secundra.

^{*} The palm of fuperior accuracy is, on all hands, coded to this celebrated traveller. Even the ornaments of the caps on the head of this triple deity are minutely delineated. This is furely an argument greatly in favour of the authenticity of the plates by Niebohr; though the general appearance, both of the caps and the bult, here reprefented, materially varies from that exhibited in the feventh volume of the Archeologia, and in the large plate lately published, in this country, by Mr. Forbes. From a furvey of the engraving in the Archeologia, one would think that, by the centre, a female figure was intended to be reprefented. In my account of this coloffal bult, I have myfelf adhered as strictly to the written relation of the Swedish traveller as my congraver has to the design of it in his expensive volumes.

cundra, near Agra, and those of the walls of the grand pagoda of Seringham, which are four miles in circumference, has often fubjected me to the smile of farcasm and the sufpicion of credulity; but we are not to judge of Oriental architecture by the models of Europe, in which, as in ancient Greece, beauty rather than magnificence is studied. It was natural for those, who thought the Deity best reprefented, as I have elsewhere observed, by gigantic fculptures and maffy fymbols, to fabricate their images in conformity to their magnified conceptions in theological concerns, and to erect the vast edifice of dimensions proportionate to the august form of the Divinity.

In an ancient Sastra, or commentary upon the Vedas, translated by Colonel Dow's pundect, there is a passage which strikingly demonstrates the sublime, but gross, conceptions entertained by the Indians, concerning the Deity, which, probably, contributed to give their immense elevation and magnitude to the sacred fabrics of Hindostan: "BRAHME, that is, the supreme God, from whom Brahma is only an emanation, existed from all eternity, in a form of infinite dimensions. When it pleased him to create the world, he said,

RISE UP, O BRAHMA! - Immediately a spirit, of the colour of flame, issued from the Deity, having four heads and four hands," emblematical, I prefume, of the four elements and the four quarters of the world. " Brahma gazing round, and feeing nothing but the immense image out of which he had proceeded, travelled for a thousand years in the anxious endeavour to comprehend its dimensions. But, after all his toil, he found his conceptions on that subject as dark as before. Lost in amazement, Brahma gave over his journey. He fell proftrate, and praised what he saw with his four mouths. The Almighty then, with a voice like ten thousand thunders, was pleased to say, Thou haft done well, O Brahma, for thou canft not comprehend me!"\$

The whole of the eleventh chapter of the Geeta is at once wonderfully fublime and pointedly illustrative of their ideas of the Divine Being. There is also a passage, written in the true romantic style of Indian allegorists, which occurs in Sir William Jones's Discourse on the Chronology of the Hindoos,

See Dow's Introduction to Ferifita's History of Hindellan, vol. i. page 50, fecond quarto edition.

doos,* which displays their conceptions on this point, and, being concife, shall be here inferted .- " A thousand great ages (centuries) are a day of BRAHMA; a thousand fuclr days are an Indian hour of VEESHNU; fix hundred thousand such hours make a period of RUDRA; and a million of Rudras, that is, as Sir William has reduced them to arithmetical calculation, two quadrillions five hundred and ninety-two thousand trillions of lunar years, are but a second to the Supreme Being." Under fuch awful impreffions of the divine nature, who can be aftonished at the magnitude and extent of the temples erected in honour of the Deity by the superstitious Indian?

But to return to the subject more materially under consideration, which is that of the increased expense of these volumes, in consequence of the engravings, without which, I must again affirm, the principal objects alluded to in the course of writing them would be but faintly elucidated. By casting an eye upon the engraving of the grand pagoda, inferted in this volume, he will more easily conceive their general form of construction, than it was possible for me, by words, to inform

^{*} Afiatic Researches, vol. ii. p. 115.

form him; and he will comprehend how easy it may be for an edifice, not covered in at the top, but containing, in its internal recesses, small chapels, as shrines of the gods venerated within its walls, to be erected of any proportions, however immense; while the fervour of that devotion, which originally planned, continued equally to animate, the Rajah, and his toiling subjects, to the completion of the magnificent fabric.

That a people, who, as they are reprefented by the correct pen of Mr. Orme, in the elegant preface to his History, shudder at the fight of blood, and are, upon that account, totally ignorant of the anatomy of the human body; that the timid and gentle Hindoo, who, from his notion of the Metempfychofis, "afflicts himfelf at the death of a fly," and who is, perhaps, "the most pusillanimous and enervated inhabitant of the globe," fhould once have profusely shed, in facrifice, the blood of men, bulls, and borfes, is a stupendous phænomenon in the history of human nature; it is, however, a folemn fact, and the reality of its existence, in very remote æras, is, I truft, fufficiently demonstrated in the following pages. Without an engraving of CALI, the fable goddess to whom human

human victims were occasionally facrificed, a work of this kind must have been imperfect; but of the only two portraits which I ever faw of that deity, the one is exhibited in Mr. Holwell's Historical Events, and the other in the first volume of the Asiatic Refearches. Of these I wished rather to present the reader with the former, which was copied, by Mr. Holwell's artist, from the walls of an ancient pagoda, and is the one most descriptive of her savage character and nefarious rites. But, as the venerable author is, to the great happiness of a most numerous and respectable circle of friends, still living, and as our opinions on the subject unfortunately clash, I felt myself very delicately fituated in regard to copying it, as I did not think proper to have it engraved without his permission; and I could only produce it in proof of an hypothesis different from his own. From this dilemma, however, I was foon relieved, by the kindness of his liberal and obliging relation, William Birch, Efq. of Dean-Street; and the figure has been engraved, on a contracted plate, with equal fidelity and spirit.

That superstitious veneration for the Sun and Fire, which, in the earliest ages, diffused itself

itself from UR, of CHALDEA, through all the Afiatic world, constitutes too remarkable and prominent a feature in the Religion of Hindostan, not to be conspicuously brought before the eye of the reader in an engraving explanatory of its mystic rites. The important magnitude of the fubicct, and the extensive prevalence of that superstition, seemed, indeed, to demand from a writer on Oriental history and antiquities more than common attention, and therefore the exertions of the engraver have been called forth to furnish my fubscribers with three plates elucidatory of that fplendid idolatry. Of all the differtations on this curious worship, since Dr. Hyde's, in the Religion of the Ancient Perfians, flands deservedly highest in repute, and is equally scarce as it is authentic, I have been obliged to that author for two of those plates; the first immediately illustrative of the Sabian superstition, copied from the tombs of the ancient fovereigns of Persia, at ISTA-KER, the ancient Persepolis: the second exhibiting a spacious FIRE-TEMPLE, with five lofy cupolas crowning the fummit of the dome, and with cavities pierced in their fides, to ferve as vents for those columns of smoke that for ever ascended from the grand altar.

altar, erected within. The former is exceedingly curious, and has been borrowed by Mr. Bryant, as well as myself, in proof of observations which, in many points, must be unavoidably similar in all investigations of Asiatic mythology. The comparative parallel, however, of the several systems of theology adopted in the neighbouring nations of Asia, with those of India, illustrated by engravings, has not been before attempted, in so extensive a degree, at least, in this country, as in the work now submitted, with becoming diffidence, to a candid public.

This curious engraving represents, as explained on the plate itself, a Persian monarch in a posture of adoration before the great objects of ancient Iranian devotion. The image of the ascending soul of the monarch, exhibited on the rock above, is a striking proof of the belief of the ancient Persians in the immortality of the soul, and it appears as if mounting up to that hallowed orb, in which, according to Dr. Hyde, in the same book, the Persians supposed the throne of the Deity to be fixed. Even if Sir William Jones, in his most elaborate researches into Oriental antiquity, had not discovered to us that interesting and impor-

VOL. I.

G

tant

tant fact, that a dynasty of Hindoo princes, denominated MAHABADIAN, a title of Sanfcreet origin, fate upon the throne of Iran, or Persia, before the accession of Cayumaras, whom the TARIK MIRKHOND, and after that chronicle Sir William himfelf, in his short History of Persia, formerly afferted to have been the first regular monarch of that empire; had not the fame indefatigable explorer of Asia told to astonished Europe, that, of the ancient and venerable language of Persia, called the ZEND, " fix or seven words in ten were pure Sanscreet;" the similarity of their devotion, in this respect, evidenced in the daily and fcrupulous celebration, by the Hindoos, of the Howm, or burnt facrifice; in the famous fects of SAU-RA's and SAGNICA's; and in the numerous AGNIHOTRAS, to this day kept blazing in Hindostan, but more especially at the celebrated city of Benares; more than sufficiently decides, that a most familiar connection, in the earliest periods, has subsisted between the two nations.

If, in consequence of this religious veneration of the Hindoos for the Sun and for Fire, objects which were so early and so universally deified through Asia; if, on the survey

furvey of those innumerable images, human, bestial, and compounded of both natures, which are sculptured in every sacred cavern and painted in every pagoda of Hindostan; I have, more than once, in the course of the Theological Dissertation, branded her superstitious sons with the name of IDOL-ATERS, let not my meaning be mistaken, nor my words mifrepresented. While I again affert that the unity of God is the principle which forms the basis of the pure, primæval, fublime, theology of BRAHMA, as promulged by the great VYASA, the Plato of India; while I allow that the folar fire is a noble fymbol of that divine, all-vivifying, all-pervading, energy that supports and animates creation; I may, furely, be permitted to affert that of India which is fo true of all other countries, - that, in every age, there have not been wanting priefts, fufficiently artful and base, for venal purposes, to veil the awful truth from the eye of the multitude .-I may, furely, be allowed to infift upon what the theological history of every nation fatally justifies, that the Deity is too frequently forgotten in the contemplation of that very fymbol, which was, originally, intended to impress upon the devout foul the more immediate G 2

mediate fense of his presence, and that the image itself has often received the homage due to the Divinity represented. By the word idolater, thus used, I would be understood to mean the offence in its mildest fignification; for he, who worships God BEFORE AN IDOL, IS AN IDOLATER. When the Jews, in the defert, exalted on high the Apis of Egypt, they did not suppose that statue to be God himself, but to be animated by the soul of the Deity, and, through it, they addressed their . prayers to HIM, who, being a spirit, must necessarily be degraded by all symbolical reprefentations whatfoever, whether in the beaven above, in the earth beneath, or in the waters under the earth. In this fense then the inferior tribes of Indians are idolaters; they regard, with idolatrous reverence, the Sun and Fire; they represent, under a thousand images, the attributes of God, and they bow down before them. It is my anxious wish to foften down the phrase, in submission to Mr. Hastings, who, near the period of the close of this volume, indulged me with a conference, of which I have only to lament that it did not take place fooner; a conference, during which, while my honest ambition was animated by the approbation of fo able

able a judge of Hindoo history and literature, my judgment was improved, and the bounds of my knowledge of the Indian mythology and sciences enlarged. From that gentleman's obliging and ready communication, I learned to entertain more just conceptions of the great Triad of Deity, Brahma, Veefhnu, and Seeva, and the ten Avatars, than any books could impart to me; and by him I was gratified with the fight of an expressive and beautiful print, from which I hope, hereafter, to obtain his permission to have an engraving taken, of a female Indian devotee prostrate before the venerated flame. Recollecting, at the moment, a curious plate, which I had feen in Tavernier, of Your penitents under the great banian-tree, of which fome, extended on the back, were, apparently, adoring the Sun, I could not avoid repeating a paffage from the Heetopades, cited in the fecond volume of this Differtation, and so highly elucidatory of the subject before us. "The Sun should be worshipped on the back, the GOD OF FIRE upon the belly."

The third plate, allusive to the Solar Worship, is that very striking representation of A SACRIFICE TO THE SUN, sculptured on a rock in the Thebais, which so eminently

G 3

both

both corroborates and illustrates what I have advanced, concerning the probable species of worship anciently celebrated in the sacred caverns of Elephanta and Salsette.— Concerning that valuable fragment of antiquity, so much has been already said in the text, and so accurate a description of it given, from M. Lucas and Mountfaucon, as well as from Savary, ocular witnesses of its existence, as to render any additional remarks upon it, in this place, impertinent and unnecessary.

In presenting my readers with an engraving of the MATSE-AVATAR, or first incarnation of Veesheu, in a form composed of man and fish, I perform an act of voluntary supererogation, fince it is not immediately connected with the subject of this volume, and more properly belongs to the ancient Sanscreet History of India. I have, however, in various places of this volume, so positively afferted the attestation, given in ancient Sanscreet treatises, to the Mosaic doctrine of a general deluge, that it is not wholly irrelevant to the Indian Antiquities, nor will, I trust, be unacceptable to that portion of my subscribers, possibly not a few, on whose account I infert it; those who, discouraged

raged or difgusted with the increasing bulk and expense of this work, may withdraw their names from the future support of it. As it must necessarily appear again in its proper place, among the engravings of the other Avatars, they will be candid enough to confider this spontaneous subjection of myfelf to unnecessary expense, at once as a mark of my grateful respect for their past patronage, and as a proof that I am not exciting expectations which I want integrity to fulfil or ability to gratify. As the engraving itself is accompanied, in the pages immediately preceding its infertion, with an account of the mythologic figures pourtrayed upon it, and as the whole must be largely commented upon hereafter, it would be trespassing on the time of my readers, at present, to say more on the subject. Those of them, who; during the perufal of this volume, may keep their eye directed toward the parent-country of mankind, will not fail, in the Matfe-Avatar, to recognise the Oannes, or Fish-God, of the Babylonians, and the DAGON of the Phænicians; for of this very form, balf man, balf fish, are both these deities described; the former in Berosus,* the latter in Selden. G 4

[.] Berofus, apad Eufebii Chronicon, p. 5.

Selden.* Indeed the very etymology of the term Dagon, more generally received among the commentators, forcibly corroborates this hypothesis, which deduces the whole from patriarchal traditions, in future ages mutilated; since, according to Bochart, (for, the radical is disputed,) it is derived from the Hebrew DAG, a word signifying FISH.

After the extensive range taken by me on the fubject of ancient caverns and cavernworship in Asia, especially of those near Bombay, it would have been an unpardonable omission, not to have attempted to oblige the European reader with one glance, however transient and defective, of that of Elephanta, the glory of India and the wonder of Asia. The PERSPECTIVE VIEW of Elephanta, here presented to him, though copied after the best sketch of it extant, is, indeed, of that imperfect kind; but it will ferve to exhibit, more clearly than any verbal description could avail, the form and arrangement of the fingular columns which adorn that august subterranean temple, the workmanship and magnitude of the grand mythologic buft, and statues of other Indian gods. that is, deified Rajahs; and the general plan, upon

[·] Selden, De Diis Syriis, syntag. z, cap. 3.

upon which that facred and gloomy recess has been excavated in the remotest periods of antiquity. In imagination, he will naturally be led to wander through those dark winding avenues, and, as he ranges the dreary Verandas, he will, for a moment, be plunged in all the horrors of the terrified aspirant, described fo feelingly by Apuleius and Dion Chryfostome, who had themselves been initiated. There, doubtless, the whole stupendous drama of the Indian theology was anciently performed and the grand machinery displayed, while kings were the actors, and holy Brahmins the admiring spectators! There, doubtlefs, the great god and prophet RAM has often fought over again his wonderful battles with the giant Ravan; and Creeshna has often sported, as of old, upon the hallowed plains of Mathura. The ancient Sanfcreet history of India is pourtrayed upon those walls. On a very recent and more accurate contemplation of its sculptures, finely engraved, a LIGHT, like that which broke in upon the initiated of old, has poured upon me, from amidst the deep obscurity of that folemn retreat; and the Avatars, defcending from their stations, feemed to fweep before me in all the majesty of their ancient grandeur.

grandeur. That portentous and terrific figure; holding the terrified infant, which has perplexed all the beholders, which has been miltaken for the judgment of Solomon, and was, by myfelf, fo naturally and, I truft, venially represented as the destroying Power of India, I am now convinced is no other than the tyrant CANSA, fovereign of Mathura in the eighth Avatar, thirsting for the blood of the infant Creeshna, who, it was predicted, (a prediction afterward verified,) would dethrone and destroy him: in consequence of which, he ordered all the male children born at that period to be destroyed. He grasps the infant by the thigh, because the enraged Canfa, as foon as he was born, rushing to the apartment where his supposed destroyer was, according to my author, Sonnerat, feized the affrighted babe by the legs, and, whirling it in that posture through the air, would have dashed out its brains against a stone, in the face of its fupposed mother; but that child was a female fubflitute, born at the same hour with Creeshna, and exchanged by the command of the divine child himfelf, who, with his very birth, enjoyed the miraculous faculty of speech. By the same immortal infant, the

the female changeling was preserved unhurt; for, though at a distance, the power of Creeshna operated so far as to enable her to burst from the grasp of the over-thrown tyrant, and tower above him, in the air, a majestic goddess with eight arms; a circumstance which ought not to excite the ridicule of the reader, since, as I have elsewhere remarked, the numerous heads and arms, that decorate the statues of India, are only symbols by which a rude nation intended to express their ideas of superior wisdom and pre-eminent fortitude.

The event of Creeshna's birth, and the attempt to destroy him, tools place by night, and, therefore, the shadowy mantle of darknels, upon which mutilated figures of infants are engraved, (darkness at once congenial with his crime and the feafon of its perpetration,) involves the tyrant's bust; the string of death-heads marks the multitude of in-, fants flain by his favage mandate, and every object in the sculpture illustrates the events of that Avatar. It is engraving for me with all the accuracy of delineation and spirit that diftinguishes the original, and will appear among the Avatars. In this particular figure there is great display of genius and great energy

energy of expression; a tolerable engraver; therefore, can scarcely fail of executing, from fuch materials, a fatisfactory print. I must, however, forewarn the reader, that, if, in the plates prefented to him, in a work of this kind, which are necessarily taken from voyages, travels, and volumes, ancient themfelves, and allufive to remote antiquities, he expects to find any very superlative excellence, either in the defign or the execution, it is fearcely possible but he must be disappointed. There are few travellers who enjoy the advantage of Sonnerat and Niebuhr, in carrying with them, at the expense of royal munificence, able draughtsmen; fewer still, who, like Norden and Le Bruyn, are themselves accomplished artists. - Happy would it be for science were the case otherwife! In general, the precious fragments of antiquity are copied on the spot from rude sculptures on rock, or half-defaced paintings in Eastern temples, by travellers little acquainted either with the sculptor's or the painter's art. In most instances, too, it is impossible for the artist to deviate from the exemplar before him, however defective in propriety, and however contrary to the established rules of his profession. So correct a

FAC-SIMILE, as may convey a just conception of the object intended to be represented, is in general the utmost that the reader can reasonably expect. These reflections are indeed less immediately applicable to the figures in Elephanta than most others in antiquity, fince they are in general excellently defigned; and, indeed, many of those figures are fculptured with fuch spirit and expresfion as must astonish every spectator who confiders the remote period of their formation; and, if the statues, copied from Egyp. tian caverns, in Mr. Bruce's Travels, be genuine antiquities, we shall not long helitate in pronouncing both to be the fabrication of the same indefatigable race. What wonderous race that was, and from what primæval country they diffused themselves over all Asia and the greatest part of Africa, the reader may form fome conjecture, by perufing the latter part of the extended prospectus, which precedes the Theological Differtation. Mr. Bryant's hypothesis, accounting for the great fimilarity which prevails in the architecture, supernal and subterraneous, of the two countries, (a fpecies of architecture which awes us alike with its massy solidity and its stupendous elevation,) is the only one upon which the

the difficulty can be explained. A view of the VESTIBULE of the grand temple of Dendera, the ancient Tentyra, (by mistake printed Tentara in the engraving,) which is described by Pococke and others, is given on the same plate with the perspective view of the Elephanta-cavern, as well because, from being half-buried in the fands, it may, in some degree, be ftyled fubterraneous, as because it difplays the hieroglyphics and mythologic fculptures with which the columns and walls of the Egyptian temples were covered. The former are, indeed, too minute to be accurately diftinguished; but, of the order and the number of them, from that plate, a correct idea may be formed. What must the temple itself have been, of which fo magnificent an edifice was only the VESTIBULE?

Connected with the caverns of India are two other subjects, concerning which I request the reader's permission somewhat more explicitly to deliver my sentiments. The first regards that particular species of worship so predominant throughout Hindostan, I mean that of the LINGAM, or PHALLUS, of which the disgusting emblem is so conspicuously pourtrayed in all the pagodas and sacred caverns of India. Every reader, who at all reslects,

will be fensible how difficult it must be to write on such a subject in words that may not offend even the eye of virgin innocence; of which class of readers, I trust, a few will honour these pages with a perusal. I have been as careful as possible to select expressions that may unfold my meaning without giving offence; and have, on that account, curtailed, even to obscurity, my remarks on a subject, of which, taken up in a physical and philofophical point of view, the full elucidation would require volumes; and upon which, in fact, not a few volumes have been written. I have, in the following pages, confidered that worship merely in a theological light; and, though I am not ignorant of a great deal which has been written, by Sonnerat and others, concerning the purity of morals and intention of the first devotees of the lingam, in India, and the phallus, in Egypt, yet I cannot avoid thinking, that the less said in praise or vindication of it the better in European countries, where more pure and nobler conceptions of the great generative and creative power, that formed the universe, happily prevail; where the inhabitants are not lulled in the infensible apathy and divine absorption of the pious Yognes, and where the ebullition

of licentious passion is not so effectually curbed by viands fimple and innutritious as the rice and water of the abstracted and philosophical race of Brahma. Confidered in a theological point of view, and writing in a country professing Christianity, I trust, I have referred to indecent a devotion to its true fource, the turpitude of HAM, whose Cuthite progeny introduced it into Hindoftan, together with other depravities, destructive of the pure primæval religion of SHEM, or the principles of the Veefhnu fect. Even those, who strenuously contend for the unfullied morality of the first institutors of the worship in question, will, doubtless, admit the truth of what I have afferted in this part of the work, concerning the adulteration of its original purity, so evident in the profitution of the women of the pagoda, and the indecencies practifed in the mysterious rites of BACCHUS, and the BONA DEA, at Rome. My object, therefore, is to evince, that the brevity I have observed, on a fubject which, in a Treatife upon the Theology of Hindostan, might naturally be expected to engross a larger portion, has proceeded from choice, not from ignorance of the extensive and deeply-physical

cal nature of the fubject, nor inattention to the prevailing manners of India.

The other subject alluded to is that of the Metempsychosis, concerning which, and the mysterious rites of initiation in those caverns, so much has been already observed.

It is the opinion of M. Niebuhr, inferted in his chapter upon ELEPHANTA, that a full examination of the antiquities of this cavern, its form and decorations, would not only throw great light upon the ancient hiftory of India itself, but upon the history and theologic rites of other Afiatic nations. With this hope, and with the key supplied me by Porphyry and Celfus, to welock all the theological and philosophical mysteries anciently celebrated in caverns, I trust I have contributed fomewhat towards removing the veil of obscurity, in which the history, the rites, and defign, of that aftonishing excavation has been fo long involved. That certain myfterious rites were there celebrated has been proved, as far as analogy, in theological fentiments, and fimilarity, in the fabrication of the eaverns, with those in the mountains of Perfia and Upper Egypt, could tend to establish the proof. For, to what purpose was there the double entrance into them, by NORTHERN Vol. I. H

NORTHERN AND SOUTHERN GATES, according to the Homeric description of the cave of the Nymphs, inferted in the fubfequent volume, of which, the North entrance was that through which the foul, in its journey of the Metempfychofis, passed to the lower fpheres, while that to the South was facred to celestials alone; for what purpose were intended the winding avenues, the high altars, the tanks for ablution, and the gloomy interior recesses, but for the regular performance of fimilar ceremonies, and the arduous exercise of kindred virtues. To place, however, the disputed point beyond all doubt, I have now to inform the reader of the following intelligence. More extenfive inquiry, fince that portion of my book went to press, which afferted that fimilar rites were performed in the Indian caverns, as were anciently celebrated in the mystic cell of Ofiris, the cave of Mithra, and the temple of Eleusis, has obtained for me authentic information, that, at this very day, fomething, very much refembling the ancient notion and practice of purification in facred caverns, continues in vogue among the Hindoos in one of our own fettlements. In the island of Bombay, about two miles from

from the town, rifes a confiderable hill, called Malabar-Hill, which, stretching into the ocean, by its projection, forms a kind of promontory. At the extreme point of this hill, on the descent towards the sea-shore, there is a rock, upon the furface of which there is a natural crevice which communicates with a cavity opening below, and terminating towards the fea. " This place," fays an author, to whose printed account of it I was referred for corroborative evidence of its existence, " is used by the Gentoos as a purification for their fins, which, they fay, is effected by their going in at the opening below, and emerging out of the cavity above. This cavity feems too narrow for persons of any corpulence to squeeze through; the ceremony, however, is in fuch high repute in the neighbouring countries, that there is a tradition, that the famous Conajee Angria ventured, by stealth, one night upon the island, on purpose to perform this ceremony, and got off undiscovered."*

After the accurate MAP OF ANCIENT IN-DIA, presented to the literary world by M. H 2 D'Anville,

^{*} See Grose's Voyage to the East Indies, vol. ii. p. 57, se-

D'Anville, in his excellent treatise, entitled ANTIQUITE GEOGRAPHIQUE DE L'INDE, it would have been prefumptuous and impertinent to have attempted the fabrication of another. I have, therefore, had that map correctly re-engraved, as an unerring guide to the classical reader, while he peruses the accounts from Ptolemy, Strabo, and Pliny, in the geographical treatife, and purfues the rout of Alexander, through what is called the PANJAB of India, or country watered by the five great branches of the Indus; beyond which, eastward, the conquests of that invader, however magnified by the Greek historians did not extend. In the very few alterations I have ventured to make in it, I was guided by Major Rennell's map of Northern India, in the last edition of his memoir. The fituation of the Cathæi, which is not marked in D'Anville's map, except by the scite of Sangala, is ascertained by that of Major Rennell, though I ought, perhaps, again to apologize for perfevering in the mode of spelling that name. It was, however, agreeable to an hypothesis adopted by me, of the propriety of which the reader must be the ultimate judge, and perhaps, in conformity to that hypothesis, I ought,

ought, at once, to have adopted the orthography of Mr. Bryant, and written the word Сотны. I thought it would likewise gratify the reader's curiofity to fee A NATIVE MAP of HINDOSTAN, and, among a variety offered to me, I have adopted the one which I prefumed was most authentic, that in the Ayeen Akbery. It is only partially explained in the Differtation; a fuller elucidation of the meaning of the Hindoo geographers will be given in the chapter on the Literature of the Hindoos. Their commerce with Europeans has been the happy occasion of amending their gross errors on that fubject. In the future volumes of this work, two other maps will be presented to the reader, for the elucidation of the Modern History of Hindostan: the former exhibiting the country properly called by that name; the latter, the peninfula, agreeably to the recent partition of the dominions of Tippoo Sultaun among the belligerent powers, under the politic, the moderate, the judicious, management of a noble commander, whose distinguished magnanimity cannot fail of being blazoned on the page of history, for paufing in the full career of glory to check the ardour of dangerous ambition, and remembering H 3

membering mercy in the moment of certain victory.

Such are the engravings and maps with which the volumes, now offered to the public, are decorated: and some of those that are now engraving for the volumes, which are immediately to succeed, are still more curious, though possibly they may not be so nume-I again beg permission to repeat, that it is impossible to separate the ancient mythology and ancient history of any of the great empires of Afia. He, who fastidiously rejects the former, must refign all hope of comprehending the latter. With respect to the history of ancient Aidia, it appears to me to be a species of astronomical mythology; and possibly, when more fully investigated, the testudo of the Egyptian Hermes, and the tortoife in which Veelhnu became incarnate, will both be found to have reference to the fign that flowly winds round the North pole. Mercury and Bhood, another incarnation of Veefhnu, evidently relate to the same planet; for the dies Mercurii of the Greeks is undoubtedly the dies Bbood of India, and Bhood is the god Woden of the Gothic nations, as is evidenced in the day of Woden, that is, Woden's day, or, as we are accustomed corruptly

corruptly to write and pronounce the word, WEDNESDAY. Engaged necessarily, therefore, in these more extended inquiries, and involved, consequently, in great additional expenses, I find myself reluctantly compelled to fix the price of subscription to the Indian Antiquities at Two guineas instead of ONE. I make this alteration with the full concurrence of the major part of my fubscribers; I trust it will meet the approbation of the remainder; and, that those may not be injured, whose benevolence to the author, and candid opinion of his undertaking, induced them to subscribe for two copies of this work, I submit it to them that they take no more than one copy.

I have observed before, that, in the course of the wide range which I have been compelled to take in the field of Asiatic mythology, certain topics have arisen for discussion, equally delicate and perplexing. Among them, in particular, a species of Trinity forms a constant and prominent feature in nearly all the systems of Oriental theology, a doctrine, which, though exceedingly curious, and deeply connected with the old philosophy of the East, as it concerns the Pagan world, having been never yet sul-

ly investigated, nor accurate engravings of the Gentile Trinities, in regular feries, ever yet presented to the public, I have ventured, with a trembling step, upon that hazardous talk. It was not from choice, but from necessity, that I have entered thus largely upon a subject, which, from the incessant operations of the great Indian Triad of Deity, Brahma, Veeshnu, and Seeva, in the mythology of Hindostan, was intimately blended with others, treated of in these introductory volumes. This extensive and interesting subject engrosses a considerable portion of this work, and my anxiety to prepare the public mind to receive, with indulgence, my efforts to elucidate fo myfterious a point of theology, induces me to remind the candid reader, that visible traces of this doctrine are discovered, not only in the THREE PRINCIPLES of the Chaldaic Theology; in the TRIPLASIOS MITHRA of Persia; in the TRIAD, BRAHMA, VEESH-NU, and SEEVA, of India, where it was evidently promulged in the GEETA fifteen hundred years before the birth of Plato; but in the NUMEN TRIPLEX of Japan; in the inscription upon the famous medal found in the deferts of Siberia, " to the TRI-

UNE GOD," to be feen at this day in the valuable cabinet of the Empress, at Petersburg; in the TANGA-TANGA, OF THREE IN ONE, of the South Americans; and, finally, without mentioning the vestiges of it in Greece, in the fymbol of the WING, the GLOBE, and the SERPENT, conspicuous on most of the ancient temples of Upper Egypt. Thus univerfally, and in fuch remote periods, prevalent in Asia, and the neighbouring regions, it became absolutely necessary fully to inquire whether so fundamental an article of the Christian faith was or was not known to the ANCIENT IDENT I trust, that the fact of its having been known, though obfourely, in Palestine, will be amply proved in the following pages. I likewise flatter myfelf, that the production of all the evidence, for its having been actually believed by the ANCIENT JEWS, will be a circumstance as highly gratifying to the affenting Christian as the exhibition of the various symbols, by which the Trinity was shadowed out among the Pagan nations, will be to the VIRTUOSO and the ANTIQUARY.

Of those who may not be inclined to credit the affertion, "that this doctrine was obscurely known in Palestine," I beg permission,

mission, in a more particular manner, to feat quest the attention to that very curious emblem, engraved on the plate of the symbols of the Hebrew religion in the fourth volume of this work, by which the ancient Jews were accustomed to designate the inestable name Jehovah, in manuscripts of the most venerable antiquity, for their serious reslection.

That symbol is a characteristical representation of a TRINITY in UNITY; the former represented by three Jons, denoting the three hypostases, or persons in the divine essence, the Jop being the known character of that Jehovah, of whose name, in Hebrew, it conflitutes the first facred letter; the latter shadowed out by the circle that furrounds them, as well as by the point Kametz, fubjoined to the three Jops, which denotes the ESSENTIAL UNITY common to the three hypostases. The symbol itself is to be found in the writings of the younger Buxtorf, one of the profoundest critics in Hebrew literature that ever flourished out of the pale of the lewish church, whose judgment on this point will, hereafter, be inferted at length; and it is likewise preserved in that curious repository of Oriental antiquities, the Œdipus Ægyptiacus of Athanasius Kircher. The first afferts.

phrases, kept sacred from the vulgar, among the Jewish doctors, the name Jehovah is thus designated; and the second declares, that he himself has seen that name thus invariably characterized, in all the ancient Hebrew manuscripts of the Bible, in the Vatican. I thought this information so important, that, at my desire, a learned sciend has written to the librarian, at Rome, for correct intelligence relative to the truth of this declaration, and the age of the manuscripts in which the designation appears. The result of this inquiry shall hereafter be submitted to the consideration of the reader.

There is likewise another symbol, of a nature too curious to be unreferred to, by which this doctrine of the Trinity was shadowed out among the ancient Egyptians, and which, whoever will examine the plates of Norden and Pococke, will find conspicuously sculptured on almost all the portals of the more ancient temples of the Thebais. It is a figure highly picturesque and beautiful, compounded of a GLOBE, the just emblem of omnibotent power, and, therefore, strikingly descriptive of the great Father and Sovereign of the universe; of a serpent; issue

ing from it; that ferpent, which, being the known emblem of ETERNITY and WISDOM in all the fystems of Asiatic Mythology, most expressively typifies the ETERNAL WISDOM, who emaned from the fountain of the paternal godhead; and of a wing, proceeding likewise from the central orb, by which hieroglyphic; the Egyptians, on all their monuments, defigned AIR, or SPIRIT, in general; but, more particularly, as I hope, hereafter, indisputably to evince, that immortal CNEPH, or primordial SPIRIT, whose EXPANDED and PROLIFIC wings, brooding over the vaft abyls, rendered fertile the inget mass, while its vivifying breath infusia the vital principle into the various classes of animated nature. This Egyptian symbol of their divine triad has been copied for me with great accuracy, and will be found engraved on the fecond plate of the fourth volume of this work.

This subject has been the occasion of my entering more at large than I had intended, or indeed would otherwise have been necessary, into the ancient rabbinical theology of the Hebrew doctors, as delivered down to their posterity in the Targums, the Talmuds, and other compositions of the most celebrated cabalists of the ancient synagogue;

a line of speculative divinity which, I confess, was till lately totally unknown to me, and the investigation of which required no fmall portion of time and industry. The comprehenfive view which I have taken of the same subject required a more minute and critical examination of the authenticity and antiquity of those Chaldaic oracles, which are attributed to Zoroaster, than I could find in any previous author, they having been generally given up, by all those who have hitherto treated of them, either as rank forgeries, or as involved in inextricable obscurity. But, on a more accurate inquiry into the merning of those abstruct oracles, it will appear that they only contain doctrines fimilar to those that prevailed in the more ancient and obsolete systems of theology, once prevalent in Afia; and to many, especially, that about the commencement of the Christian æra were predominant in Persia and India. Many remarkable traces, indeed, of the superstition of the old Magi, discovered in those oracles, still remain among the Indian Brahmins; particularly those that regard their mystic Theurgy, their magical incantations, their general belief in the agency of good and evil dæmons, worship of fire, fire ordeals, and other facredly-obscure ceremonies, upon which I have grounded a defence of the genuineness of those oracles. The perpetual recurrence of a sacred triad of Deity, in Asiatic mythology, (and it is of little consequence whether that triad consisted of Persons, Qualities, or Attributes destried, since they are all corruptions of one grand primæval doctrine,) gradually led me on to the examination of the fragments of ancient theology, ascribed to the Ægyptian Hermes; of the hymns attributed to Orpheus; and of what occurs more peculiarly remarkable relative to a trinity of divine hypostases, in the writings of Numenius, Parmenides, and Plato.

From various cicumstances above-enumerated in the preceding pages, and the specimen now before him, the reader may possibly be enabled to form some faint idea of the undertaking for which the exertion of his candour is respectfully claimed and the extension of his patronage ardently solicited.

For my own part, I have had principally to contend with, and to overcome, the growing magnitude of my subject. Having originally, for the sake of economy, but greatly, as I find, to my own disadvantage as an author, and materially as I fear to the injury of the engravings, chosen an octavo rather than

a quarto page for the ushering into the world of this work, I have daily occasion to feel and to lament that my efforts to elucidate the Indian History are cramped, and that the sphere in which I can only move with prudence and safety is far too circumscribed for an undertaking of such extent.

Overwhelmed with the immensity and variety of the subjects necessarily comprehended in it, I scarcely know how to break down into a compass sufficiently contracted, and into volumes that may not give birth to alarm or difgust, the enormous aggregate of materials already prepared; and which, if committed to preis without fevere Tyrenchment, would already fill ten volumes of the fize of that now fubmitted to the public. For, in truth, at a period long antecedent to the year 1700, and previous to any idea of writing Differtations, or entering into the investigation of remote Sanfcreet Annals, that extensive portion of this work, which may be called the regular classical History of Hindostan, and which, commencing with the Perfian and Grecian invalions, descends in regular succession down to the extinction of the Western empire, was already completed, though not committed to the prefs. Of

Of the numerous and cruel incursions made by Mahommedan princes into the Upper India, from the Caliph Valid, in the feventh century, traced regularly down through the feveral feries of dynasties of the Sultans of GAZNA, GAUR, and CHARASM, dynasties scarcely heard of in Europe, but highly renowned through all Afia, and deeply connected with Indian History; of the daring exploits in the fame country of the immortal Gengis, the subverter of the Charasmian dynasty; and of the fierce and fanguinary, but politic, Timur; as the history of these dynasties is detailed by Mirkhond, Abulfaragius, Abulfeda, Makin, and Abulghazi, the Tartar hifferian, compared throughout with Ferishta's native bistory of the country, and as the feats of those two great Eastern warriors, unrivalled in the number of their armies, or the arduousness of their enterprifes, even by the Alexanders and Cæfars of classical antiquity, are given in the authentic volumes of Arabshah, Sheriffedin, and the excellent edition of TIMUR'S INSTITUTES, recently published at Oxford, in Arabic and English, by Doctor White and Major Davy; of these, together with the interesting events that occurred during the reign of Baber, who

may properly be called the Founder of THE Mogul Monarchy in India, and of his father, Ulug Beg, the great astronomer, who equally awed the Despots of Asia in the field by his arms, and delighted her Literati in the fludy by his writings; of Ulug Beg, a name *to be for ever holden facred, while impartial justice continues to be the ornament of kings, and found philosophy remains the glory of learned univerfities,* and while both, terminating in an undeferved and ignominious end, can awaken in mankind the figh of commiseration; of Akber, the annals of whose extended reign are the annals of glory itself; of the magnificent Jehaun; and the intrepid Aurungzeb; of these respective characters, illustrious in arts and triumphant in arms, circumstantial and elaborate histories have for fome time past been composed by me, with which, and a few elucidatory engravings, the public shall be gratified the moment that its decided approbation shall appear to fanction the enormous expense of printing them. Happy shall I be to return from the dreary and unfruitful wilds of obscure mythology into the path of regular and connected Hif-VOL. I. tory;

Among other noble acts, Unuc Bao founded an extensive college and a noble observatory at Samarcand.

tory; and greatly indeed shall I think myself indebted to the candour of the public, if
the inaccuracies and defects of this volume
may be overlooked, in the consideration that
objects more important have engaged my attention than those that relate to precision of
expression and the minutize of errors, for the

most part typographical.

While I again lament that the engravings of this volume, which are for the most part on quarto plates, must be injured by being folded within the contracted compais of an octavo page, I think it necessary to acquaint the Patrons of this Undertaking, that a much larger number than is afual of the first impresfions of those plates has been printed off, with a view, at some period or another, to gratify the wishes of those zealous friends, who are anxious to fee a quarto edition of a work, which, they are pleafed to affert, merited a more expanded and respectable page. - For what concerns myfelf, I confess that I want neither honest ambition nor proper materials to enlarge this undertaking to any extent that may be necessary to the complete elucidation of the interesting objects concerning which it treats. Printing, however, at my own peril and expense, I freely acknowledge,

thar.

that, with the comparatively fmall support which I have hitherto experienced, I have felt the publication of it' upon an octavo page fufficiently oppressive, without at prefent engaging in a more costly edition. If, however, a fociety of gentlemen, or even of liberal bookfellers, should think the plan of a larger edition warrantable, no interested motives on my part shall obstruct the accomplithment of their wishes; but, on the contrary, every exertion in my power shall be afforded to render fuch a work more worthy the public eye than it can be in its prefent garb; and fome very curious additional (ketches, taken as well from the book of nature as from volumes of great cost and rarity, elucidatory of Indian Antiquities, and originally felected by me for the illustration of these pages, but fince laid by, as too large in the design for insertion in an octavo volume, and too expensive in the execution for a work of this price, shall be cheerfully refigned for the decoration of it. I trust that the fordid principles that fometimes difgrace authorship are unknown to my mind. I write from nobler motives than the defire of base emolument; but my situation will not allow me to be infensible to the dictates of T 2. prudence

prudence and the admonitions of friendly

anxiety for my interest.

Left, after all, the reader should think that I am induced by mercenary motives to make this increase in the price of my book, it becomes necessary that I should inform him of the undifquifed and, to myfelf, alarming truth, that, from not being the most accurate of calculators, I had myself formed but very inadequate conceptions concerning the total expenses that would be incurred by such a work; that, when he shall pay the amount of this book, as fixed above, he will scarcely lay down the value of the maps and engravings that illustrate it; and that, from the fale of fingle volumes only, unless the work collectively should meet with the good fortune to have an extensive fale, no possible compensation will arise to the author for many hours of literary toil confumed by the midnight lamp; for very confiderable property expended upon the completion of it; and health deeply, if not irretrievably, injured.

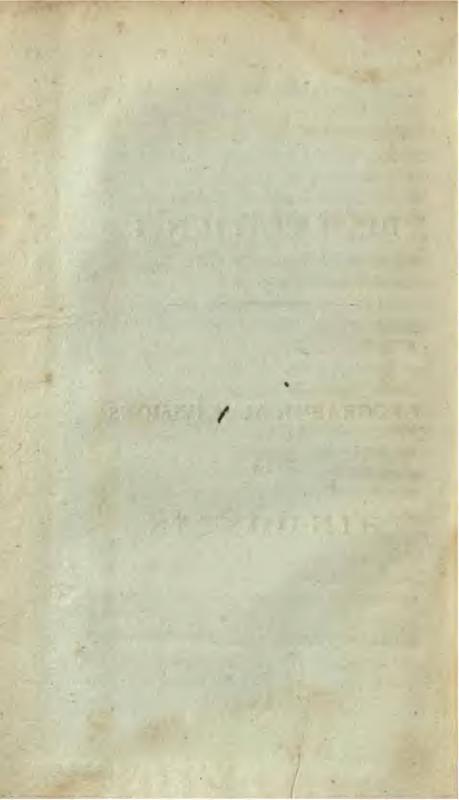

DISSERTATION I.

THE

GEOGRAPHICAL DIVISIONS

OF

HINDOSTAN.

CHAP. I.

Of the ancient Geographical Divisions of INDIA, according to the Classical Writers of GREECE and ROME.

HE science of GEOMETRY is thought to have been the invention of the ancient Egyptians, and the occafion of it the annual inundations of the Nile. A fimilar argument may be urged with far greater plaufibility in favour of its having originated in INDIA, fince many parts of that extensive region are annually overslowed, not only by the Ganges, but by many other confiderable rivers far more rapid and defolating than the river of Egypt. It was a custom of very ancient date, and of almost universal prevalence in Afia, for great monarchs and commanders of armies to carry in their train certain persons, whose office it was to measure the roads and delcribe the provinces through which they passed. These itineraries proved after-I 4

afterwards of the utmost importance to the geographer and the historian; and hence Abul Fazil, the fecretary of Sultan Akber, was enabled to give fo accurate an account as he has afforded us of the geography of the Indian Subahs, in the celebrated book which bears the name of that emperor. The old Indians themselves seem to have been more than usually attentive to geographical accuracy; for, according to Strabo, they erected columns, inferibed with directions for travellers, and marked with the distances of the several cities one from the other.* But, however well the Indians might have been acquainted with the geography of their own country, it will presently appear that they were miferably deficient in the knowledge of that of the other parts of the terrestrial globe, as indeed will be fufficiently evident to the reader, from a flight inspection of the curious Hindoo map of the world, presented to him in the course of this Geographical Dissertation. I shall devote the present chapter to the confideration of the Indian Geography, according to the Greek and Roman writers. In the fecond chapter I shall endeavour to relieve the necessary dryness, which always attends

[·] Strabonia Geographia, lib. xv. p. 661.

attends geographical details, by displaying, from authentic writers, the astonishing extent and unequalled magnificence of the successive capitals of India, under the Hindoo, Persian, and Tartar, princes; and, in the third, from Sir W. Jones's elegant little treatise, prefixed to his Description of Asia, and from the Ayeen Akbery, I shall exhibit the sentiments, on this subject, of the Persian, Arabian, and Indian, geographers. My guide, throughout the whole survey, will be the works of those celebrated modern geographers, Mr. D'Anville and Major Rennel.

India was a term applied with the greatest latitude by the ancient writers of Greece and Rome, whose ideas of the geographical divisions of this portion of the globe were exceedingly confused and inaccurate. Not only a considerable part of Scythia, by the denomination of Indo-Scythia, was comprehended under that title, but the appellation was extended to countries still more remote and unconnected; even to Ethiopia Propria, and the distant nations of the torrid zone. This circumstance will appear less surprising, when it is considered, that, in the early ages, the Red Sea itself was frequently included under the general title of the Indian Sea, to which

it is so near a neighbour, and of which Pliny* affirms it, as well as the Persian Gulph, to be a branch; † that all those countries, extending on each side of the Red Sea, were called indifferently India or Ethiopia; that even at this day the Asiatics in general understand the term India with considerable license of meaning; and that the Persians in particular give the name of Siah Hindou to an Abassine, or modern Ethiopian.

In fact, so little did the ancients know of their limits and divisions, that both India and Ethiopia were used as general terms to signify any remote uncivilized country: and in this sense Virgiv is to be understood in the fixth Æneid,‡ where Æneas, in the shades, is

informed

· Pfinii Nat. Hift. lib. iv. cap. 24.

t On the other hand, both Herodotus and Diodorus Siculus give the name of Red Sea to the Oceanus Indicus. See Hero-

dotus, fib. ii. p. 102, and Diod. Sic. lib. i. p. 41.

Curtius remarks, that the river Ganges emptied itself into the Red Sea, but is strangely mistaken when, in the next sentence, he makes the Acesmes discharge its waters into the Ganges. The following passage is illustrative of what has been faid above:

"Mare certe, quo India abloitut, ne colore quiden abbreret a ceteris.

"Mare certe, quo India abloitut, ne colore quiden abbreret a ceteris.

"Mare certe, quo India abloitut, proper quod igeari, rubere aquas, credunt." Quintus Curtius, lib. viii. cap. 9.

[139]

informed of the future glory of Augustus, and that

- Super et Garamantes et Indos

Proferet imperium -

And again, in the eighth Eclogue,* a fimilar notion is expressed:

Ismarus aut Rhodope aut extremi Garamantes :+

Where Servius, his commentator, explains the word "extremi," by adding, "quasi a consortio communitatis remoti." Horace too, under the impression of the same sentiments, calls the Indians " extremos" and " baud ante domabiles." Many other paffages might be adduced, if necessary, from various authors, to prove what obfcure and erropeous conceptions prevailed among the ancients concerning India and its inhabitants.

It was not until the expedition of Alexander, described with such accuracy by Arrian, and with fuch elegance by the more ornamental pen of Quintus Curtius, that this remote region became more particularly known to the Greeks. Of how little genuine information upon this point, even they were previously in possession, is evident from the

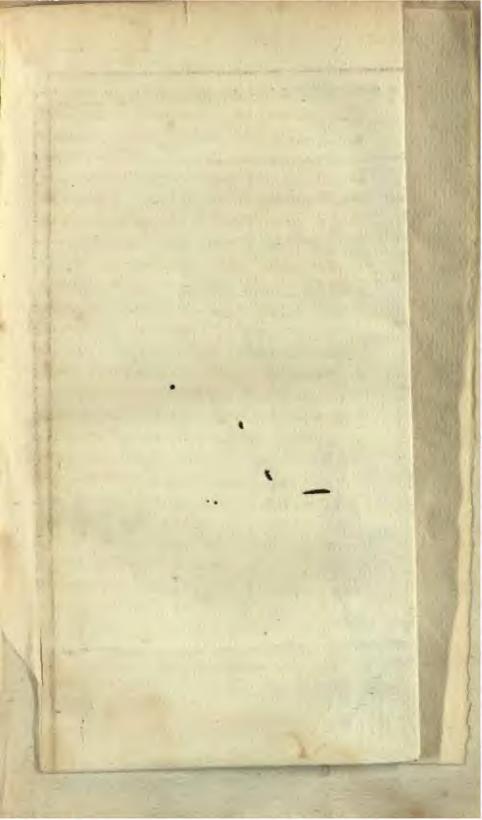

gross

[.] Eclogue viii. 1. 44.

[†] The Garamantes were a barbarous pation, fituate on the confines of Ethiopia Propria.

gross mistake into which that prince, who was by no means an inattentive observer of nature, nor unaccompanied, we must suppose, by men of fcience in his Indian incursion, unaccountably fell, in imagining, on his arrival at the Indus, that he had discovered the fources of the Nile.* That mighty river, he fupposed, after rolling through immense unexplored deferts, poured, by some unknown tract, its rapid stream into Ethiopia, where it lost the name of Indus, and assumed the appellation of the Egyptian river. He was confirmed in this strange conjecture by the appearance, fays Arrian, of crocodiles in the thream of the Indus, and of beans growing on its banks, fimilar to those which grew on the (hore of the Nile, as well as by the recollection that Homer had called the Nile Ægyptus, on its entering Ægypt; a circumstance which seemed to prove that it acquired, in its progress, the name of the various countries through which it passed. Experience, diligently fought and finally obtained, after

^{*} Προτεριο μει γε το το Ιεδο παταρος προκοδιελίες εδία, μετο των αλλών ποταριών πλην Νείλα, προς δε ταις αχθαίς το Ακιστίο πουριός πεβακότας, επειος ή γιο εκβεριο ή Αιγοπίεα, και άκοσας στι έ Ακιστίος εμβαλλεί τις ται Ιεδον ποδαρίου, εδιξεί εξευρμαίναι το Νείλα τας αχχας. Αιτίκα, lib. vi. cap. t.

after a long series of peril and difficulty, taught the Macedonian invader, as far at least as his army penetrated, a truer notion of the geo-

graphy of India.

The natural and ardent avidity of mankind, after whatever delights by its novelty or aftonishes by its fingularity, induced, however, many of those who fought for glory in an Indian campaign, in fonte instances to listen with too ready an ear to the exaggerated tales which national bigotry reported; while the defire of human distinction urged them to multiply those fictions, in order to excite more forcibly the attention and fecure more permanently the admiration of their countrymen. Strabo, who was a writer equally learned and judicious, feverely censures * both Megasthenes and Onesicritus, two officers of high repute for literature, and of exalted station in the army of Alexander, for the abfurd and incredible stories they propagated concerning the Indian country and people. At the fame time he gives us himself, in the fifteenth book of his invaluable treatife of Ancient Geography, the most authentic and faithful accounts at that time known of the divisions and subdivisions of India, intersperfed. denominated Mocran. The reason and propriety of Ptolemy's fixing these provinces rather than the Indus as its western termination will be hereafter more clearly evinced, by a quotation from an author in elegance and accuracy not inferior to himfelf, when we come to confider Hindostan according to the divisions of the Orientals themselves. These provinces, indeed, seem to be confidered by Pliny * rather as a part of the Indian than the Perfian empire; to which he adds that of Aria, whose capital is the modern Herat: for this, however, he is condemned by Cellarius, who observes, + " Quod de quatuor præfecturis Plinius dicit, widetur nimis lata terminorum extensio."

of the cities lying on the western confines of India Propria, the most eminent (for, I shall confine myself, in this geographical sketch, to the consideration of those only which were distinguished by their opulence and power) was Taxila, situated on the eastern bank of the Indus, on the site is supposed, where the eastle and city of Attock now stands. This was the flourishing capital of Taxiles, an Indian prince, or rajah, who,

^{*} Plinius, lib. vi. cap. 20.

[†] Cellarii Geographia Antiqua, lib. iii. cap. 23.

who, on the approach of Alexander, convinced, perhaps, that all opposition to so formidable a power would be in vain, went forth with confiderable prefents to appeale and join the invader. Taxila is described by Strabo* as the metropolis of a kingdom fituated between the Indus and Hydafpes, in extent as large as Egypt, well planted, and exceedingly fruitful. The city itself was not less distinguished by the elegance of its structure than by the wisdom of those just political institutions by which it was governed. Taxiles, like Porus, feems to have been rather a name common to a race of kings, than the peculiar appellation of one fovereign. The reigning prince of that name was the determined enemy of Porus; and it was chiefly by means of the information he received from this traitor, that Alexander was enabled to profecute his hostile design upon that remote country.

As it will be of material importance towards rightly understanding that portion of the Indian history which records the circumstances of Alexander's celebrated invasion, to have a clear idea of its geography, we shall in this place, assisted by the Memoir of Major Rennel on the subject, endeavour to trace the progress

. Strabo, lib. xv. p. 480.

Vot. I.

of

of that conqueror through the region to which the natives themselves have allotted the name of Panjab, or the country of five rivers, from its being intersected by the five eastern branches of the Indus. By our constantly giving, when we have any tolerable authority to guide us, the modern together with the ancient appellation of any place, readers of every class will naturally be more interested in the narrative; and the expedition of Alexander will, in some degree, be cleared from that gloom of mystery and sable in which it hath been so long and so deeply involved.

From Taxila, which Mr. Rennel with great probability supposes to stand on the site of the present Attock, because it appears to have been in all ages the pass on the Indus leading from Cabul and Candahar into India, and because (he adds, in the words of Fraser) "Attock is the only place where, from the stream being less rapid, an army can conveniently pass;"—from that celebrated capital, where he refreshed himself and his army for some days, the Macedonian conqueror advanced to the bank of the Hydaspes, the most westerly of the five rivers, called in modern language the Behut, or Chelum, but in the Ayeen Akbery* distinguished

by a name fomewhat fimilar in found to its classical appellation, the Bedusta. It is rather remarkable, that Ptolemy's mode of writing the word comes still nearer to that of the Aveen Akbery; on which passage Cellarius remarks, " Prave Bedaspen adpellav t Ptolemæus:" but, with great deference to the opinion of the learned, from the high corroborating authority of the Ayeen Akbery, I contend that Ptolemy's may be the true reading. The Hydaspes is represented as a noble river, which, taking its rife in the Indian Caucafus, mingles its waters with those of the Acesines, and at length, together with that river, rolls into the Indus at Multan. It feems to have been the boundary between the kingdom of Taxiles and that most formidable of Indian warriors, the renowned Porus.

Concerning Porus himself, and the extent of his dominions, many discordant and very unfatisfactory accounts have been given both by ancient and modern writers. The subject will more properly come under our consideration hereafter; and therefore it will be sufficient in this place to insert a remark of Sir W. Jones,* that his capital was most probably Lahor, or Lawhore, the present metropolis of Panjab,

[·] Short Description of Alia, prefixed to Nadir Shah.

whose name is often applied to the province itself. Lahore, or Lehawer, as it is said in the Ayeen Akbery to have been called in ancient astronomical tables, was undoubtedly in ancient times a very confiderable kingdom, and no other city in its neighbourhood feems of confequence enough to have been the capital of fo celebrated a prince as Porus. With the greatest deference, however, to the high authority just mentioned, I must remark, that the kingdom of Porus is expressly affirmed by Strabo* to be the country " between the Hydaspes and the Acesines; extensive, opulent, and containing near three hundred towns." Concerning thefe, however, Cellarius remarks, -- that many of them might have been mere villages. Lahore is fituated on the Hydraotes, or Rauvee.

Amidst a violent storm of hail and lightning, which concealed his army, and which may in some degree account for the traditionary story, mentioned by Mr. Hamilton,‡ that he was a great magician; Alexander, in spite of the army

^{*} Μιταξο δε του Τδασφου και του Ακαστου, στο του Ποφου κα γε παλλα και αγαθα, σειδει τι και περι τριαχεσιαι πολιων. Strabo, lib.xv. p.663.

¹ See Hamilton's Voyage to the East Indies, vol. i. p. 123.

army of Porus, drawn up on the opposite shore, passed the Hydaspes, according to Mr. Rennel's supposition, at the place where the fortress of Rotas now stands; and, after defeating that prince in a regular engagement, advanced to the banks of the second river of the Panjab, called by the ancients the Acefines, but known to the present Indians by the name of Jenaub. This branch of the Indus is represented by Arrian* as exceedingly broad, deep, rapid, and abounding with rocks, which subjected both the invader and his army to the most imminent danger. On the (pot where he defeated Porus, he erected a city in memory of the victory, which he called Nicæa; and another he denominated Bucephala, in honour of his favourite horfe Bucephalus, who died in this expedition of extreme oldage, according to Arrian, being on the verge of thirty. The former of these cities, we are informed by Ptolemy, was fituated on the eaftern shore of the Hydaspes; the latter near the western bank, on the fite where his camp stood. No more particular notice is taken of Nicæa by the ancients than what is related above; nor can I find a town in the map of modern India corresponding with it in fituation. Lahore has indeed been fuppoled K 3

[·] Arriani, lib. v. p. 222, editio Gronovii.

posed by some writers to be the ancient Bucephala; and Bernier, when he was at that city, made some inquiry into the truth of that supposition, but remarks, that, "though Alexander is sufficiently known there under the name of Sekander Filifous, that is, Alexander, son of Philip; as to his horse, they know it not."*

Having arrived, with fome lofs, on the eastern bank of the Accsines, or Jenaub, Alexander, impatient to reach the Ganges, preffed on with rapidity towards the third river, called by Strabo the Hyarotes, by Arrian the Hydraotes, and by Ptolemy the Rhuadis, or Adris. In the Ayeen Akbery, + however, it is called the lyrawuttee, which bears a striking resemblance to Hyarotes; but Rhuadis feems to be most consonant to its present name, which is that of Rauvee. The Memoir supposes him to have passed the Rauvee, on the spot where Lahore now stands. Being arrived in the territory of the Adraistæ, and having compelled Pimprama, their capital, to capitulate, Alexander found a new and most formidable foe to encounter in the united forces of the Cathæi. the Malli, and the Oxydracæ. The city which their combined army attempted to defend against the

[.] See Bernier's third letter in his Journey to Cashmire.

[†] Ay en Akbery, vol. ii. p. 131.

the veteran Greeks was called Sangala, which Mr. Rennel thinks was fituated between Lahore and Multan, and confiderably out of the direct route to the Ganges. It is but in very few instances that we are able to trace any remote fimilitude between the ancient and modern names of a country and people fo little known to the ancients as those of India. The voluntary migration of fome nations to happier climes and wealthier regions, the necessary dispersion of others by invasion and conquest, the fluctuation to which languages are subject, the alteration of the beds of rivers, and many other natural and accidental causes, concur to render every attempt of this kind most uncertain and precarious. Although the exact fite of Sangala cannot now be afcertained, it may not be improper to remark, that Mr. Hamilton mentions, among the nations inhabiting to the fouth of the mouths of the Indus, a fierce race of naval robbers, called Sanganians, from Sangania, a province of Guzzerat; and the same tract, at the period of the voyage of Nearchus, was possessed by a people called Sangadians.

Of the Cathæi, the Oxydracæ, and the Malli, fince they are faid to have been the most powerful and warlike nations of India, it is necessary to give an account somewhat more

K 4

particular,

particular, however imperfect and unfatisfactory. Kathai, or Kathay, the eastern appellation of China, being a word of Tartar extraction, and in use, as may be proved from Curtius and Strabo, among the Afiatic Scythians in the time of Alexander, has afforded opportunity of conjecture that the Tartars had even at the time of this expedition extended their frontiers on that fide as far as the Hyphafis, or Setledge, in whose neighbourhood the ancients have fixed the refidence of the Cathæi, and thus had already in some degree laid the bafis of their future confequence and grandeur in Hindostan. This early connection between the northern Indians and their Tartar neighbours is rendered probable, by the confideration that in some instances the languages of the two nations are not diffimilar, fince many words occur in each language which have a kindred orthography and fignification. Indeed Mr. Hadley,* in his Grammar of the Hindoftan Language, feems to hint the possibility of its being originally derived from their Tartar invaders; and gives a remarkable instance of that fimilarity in the name of the most celebrated conqueror of India, whose descendants for three hundred years swayed the imperial sceptre: " The

"The fignification of Tamerlane (properly Timur Lung) is Lame Timur; and the word used to express Lame, in Hindostan, at this day, is Lungrau." Of this origin probably were the Cathæi, whose manly and intrepid fortitude, displayed in the defence of Sangala, seems to justify their descent from so bold and hardy a race.*

The Oxydracæ feem to have been fituated at the confluence of the Hydraotes and the Acefines, that is, the Rauvee and Jenaub, in a direction fouth-west of the Cathæi; and it is possible, observes the Memoir, that the present city of Outch, or Atcha, might be the capital of that martial race. Mr. R. is of opinion that Alexander never penetrated into their domain, but only passed its limits on the coast. He has marked, near the banks of the Hydraotes, the probable fituation of that city, in the furious escalade of whose walls the hero who had been flattered in Persia with the honours of deity, for the fecond time, in this Indian campaign, found himself to be a mortal. The city of Outch

It mult not be forgotten, that the Cathai are called, in some ancient authors who have treated of Indian affairs, Cuthei, which rather tends to corroborate than invalidate this conjecture; for, hence the word Scuthe or Scythe has by some learned etymologists been deduced. Outch is at prefent included in the province of Multan.

Of the Malli and their fituation we are enabled, from a combination of local circumstances that point out their residence, to speak with greater certainty; for they inhabited a region still more to the fouth-west, near the shore of the main stream of the Indus; " and their capital," fays Mr. Rennel, " was doubtlefs Multan." It may be proper, however, in this place, to note, that the Dutch traveller, Nieuhoff, mentions a hardy and warlike nation, called Malleans, whose refidence is on the tops of the high mountains of Malabar, and whom he supposes to be the same people with the Malli mentioned by Plutarch and Curtius. He defcribes them as differing from the Malabars in their complexion, religion, and manners, and superior to them in bravery, ingenuity, and honesty. Their principal amusement is hunting amidst the thick forests where they reside, and where they catch in pits the elephant and tiger: they are governed by laws peculiar to themselves, are scattered through several districts in bodies of about five or fix thousand people, and each diffrict has its separate judge or captain. Malleam, their country, is fituated on the mountains of Balagaut, about 150 miles north

north of Cape Comorin, and appears in the new map of Hindostan about the latitude of 10° 40%.

Having taken Sangala, and, urged by a spirit of revenge for its resolute resistance unworthy fo great a conqueror, having afterwards rafed it to the ground, Alexander returned, and, purfuing his progrefs towards the Ganges, arrived at the fifth branch of the Indus, and most easterly river of India, which he passed in this expedition, called by Pliny the Hypanis, by Arrian and Curtius the Hyphafis, and by Ptolemy the Zaradrus. The name of Zaradrus alone bears any refemblance to its modern appellation, which is that of Suttuluz, or Setledge. In the Ayeen * Akbery it is faid anciently to have been called Shetooder. On the eastern bank of that river the adventurous Macedonian paused, not from any latent conviction of the impracticability of his ambitious project, but in constrained obedience to the united voice of his army, who refused to follow him over that dreary defert of twelve days journey which still lay between them and the Ganges, and to engage in unequal contest with the innumerable armies, which, they were informed, the powerful and warlike nations that dwelt on its banks were able to pour into the field. The reader.

^{*} Ayeen Akbery, vol. ii. p. 134-

reader, by looking into the map adapted to the geography of Ptolemy, will observe, that the Zaradrus is formed by the confluence of two rivers. To the western stream Ptolemy himself gives the name of Bipafis. And here again we find a confiderable refemblance between Ptolemy and the Ayeen Akbery; * for the Bipafis is called in the Ayeen Akbery Beypaffa, although Cellarius again observes: " Ptolemæus vitiofe Bipasis pro Hypasis legit." It is to the eastern current, and the main stream after this confluence, that he applies the appellation of Zaradrus. Confonant to this is the remark of the Memoir, which I shall take the liberty to transcribe in the author's own words. fourth river of the Panjab is the Beyah; and the fifth is the Setlege, or Suttulus. The two rivers unite about mid-way between their fprings and their junction with the Indus, and their mixed waters properly bear the name of Setlege. The Setlege, thus formed by the joint waters of the two rivers, is the Hyphalis of Alexander, and is a very confiderable river, being navigable two hundred miles above its conflux with the Indus. It passes from the fouth of, and not far from, the city of Multan; and, about eighty miles below it, falls into

^{*} Ayeen Akbery, vol. iii. p. 254.

into the Indus." From the circumstance of the desert's being between Alexander and the Ganges, which is really the case between the lower parts of the Setledge and that river, (whereas the space between it and the Beah is fertile and well-inhabited,) Mr. R. supposes the Macedonian encampment to have been between Adjodin, the ancient Ardone, and Debalpour, marked in the map of Ptolemy Dædalla. There he erected those enormous altars, threw up those stupendous mounds, and fabricated those gigantic pieces of armour, by which, says Diodorus, he meant at once to amuse and to deceive posterity.

Had the army of Alexander pursued their march towards the banks of the Ganges, in a few days they would have arrived at another considerable river of India Propria, called by Pliny the Jomanes, and in modern language the Jumna, upon which the city of Delhi stands. In the Ayeen Akbery the Jomanes is called the Jown. Delhi was, at the period of this invasion, a place of little importance, having been but newly founded, according to Ferishta, by Delu the usurper of the throne of Hindostan, and uncle of the Foor or Porus, who opposed the forces of Alexander. The vast city of Canouge, or Kinoje, was at that time.

time, and had been for many fuccessive centuries, the imperial refidence of its monarchs: and hardly any fact seemed to admit of stronger evidence, than that which Mr. R. in the first edition of his Memoir, has laboured to establish - that the famous Palibothra of the ancients is not Halabas, or Allahabad, as D'Anville and almost all modern geographers have agreed, but this very ancient capital of Canouge. Late inquiries, however, made on the fpot, evince that Palibothra stood on or very near the fite of the present Patna, and was known to the natives by the name of Pataliputra. Between the Indus and the Hydaspes Pliny reckons 120 miles, Mr. R. 135; between the Hydaspes and Hyphasis Pliny reckons 300 miles, Mr. R. 350; between the Hyphafis (that is, the part below the conflux of the Beah, where Alexander erected his altars) and the Jomanes is 336 miles, according to Mr. R. and thence to the Ganges 112 miles.

The Ayeen Akbery having given the reverse of the distances between the five rivers of the Panjab, by the measurement of the Indian cose, I shall conclude this account of its rivers with an extract from that book: "From the Suttuluz to the Beah the distance is 50 cose; from the Beah to the Rauvee 17 cose; from the

the Rauvee to the Jenaub 30 cose; from the Jenaub to the Behut 20 cose; from the Behut to the Sind 68 cose." The cose is about two English miles.

Returning, after this confiderable digreffion. to the banks of the Indus, as we descend southward along the eaftern shore, the map of ancient geography exhibits to our view the country of the Brachmanes, whose patriotic exertions, in favour of their invaded country, drew down upon them the fevere vengeance of the Macedonian tyrant; the kingdom of the Sabracæ, a powerful republic according to Curtius; of the Sogdii, in whose country he built another city, which he called Alexandria; of the Musicani, whose king, revolting after submission, he ordered to be crucified; of the Præsti, whose more-determined sovereign, Oxycanus, died bravely fighting for his country; the rich empire of Sabus, whose capital of Sindomana opened its gates without opposition to receive the triumphant conqueror; and, finally, the noble island of Pattala, the present Tatta, where he constructed docks, and resitted his fleet, for a still more daring expedition.

Of places on the modern map, corresponding in situation with that of the people and regions above-mentioned, Mr. R. only particularizes cularizes Bhakor, which, he observes, answers to the position and description of the country of the Musicani; and Hajacan, now a circar or division of Sindy, which he conjectures to have been the territory of Oxycanus: he subjoins, that in Sindomana we may recognize the country of Sindy itself, or at least that portion of it through which the river Sinde, the domestic appellation of the Indus, slows in the latter part of its course.

Southward of the mouths of the Indus we find the Canthi Sinus; that is, the Gulph of Sindy, or Cutch; and the great maritime city and port of Barygaza, which likewife gave its name to the neighbouring gulph, now called Cambay. Barygaza may be the modern Bargant, or probably Baroach, a city standing on the banks of the river Nerbuddah, the Nomadus of Ptolemy. To this emporium all the riches of the peninfula were anciently brought, through the Balagaut mountains, from the rich and celebrated cities of Tagara and Pluthana, the Deoghir and Pultanah of the moderns.* On the Sinus Barygazenus stood Supara, probably Chitpore, which Cellarius fays has been taken for the Ophir of Scripture, though others, among whom is Josephus, sup-

pole

^{*} See Afatic Refesrebes, vol. i. p. 371.

pose it to have been the Aurea Chersonesus, because abounding with all the commodities which Solomon received from Ophir. Farther fouthward is Simyllæ Emporium, corresponding in fituation to Swalley, on the river Tapti; the ancient Binda. To the fouth of the Simyllæ Promontorium, among many obscure cities, we may notice Tyndis, which Mr. R. supposes to have stood on the fite of Goa; Calecaris, the modern Calicut; Balepatna, probably Balipatan; and Byzantium and Muziris, two confiderable marts of India, but greatly infested by pirates, as indeed the neighbourhood is at this day. Muziris, Mr. R. inclines to think, is the modern Meriee or Meerzaw; Nitrias, the feat of those pirates, the present Newtya; and Barace, Barcelore. Below the river Baris were fituated Elancon emporium and Cottiora metropolis; at the extreme fouthern point, the town and promontory of Comar, which answers to Cape Comorin; and to the fouth-east of that cape the great island of Tiprobana or Ceyloan,

Having passed round the Comarian promontory, called by the Indians Gebal Kamarum, the map of Ptolemy presents to our view the Sinus Colchicus, which is separated from the Sinus Agaricus (so called from

Vol. I. L Colchi

Colchi and Argari, two cities of commercial eminence on the coast) by the promontory of Cory, or Colis, and near it stands the infula Cory, now called Ramankoil, or the temple of Rama. The famous ridge of rocks extending from this island to Manar, on the island of Ceyloan, called Adam's Bridge, Sir W. Jones contends should be entitled Rama's Bridge; and the present name of this promontory and island strengthens his remark. Madura Regia Pandionis must doubtless mean the Madura of modern maps; Nigamma metropolis answers to Nega-patan; Chaberi Oftia and Chaberi Emporium indisputably point out the port of the river Caveri and city of Caveri-patan; Melange, or rather Maliarpha Emporium, not far diftant upon the coast, seems to be Meliapour, or Malliapore, as Hamilton writes it; Puduce, Pullicat; and Sobura, Soopour. Entering the great Sinus Gangeticus, or Gulph of Bengal, we find Cotto-bara, perhaps Devi-cotta, or Cotta-patan; and Sippora, plainly Narfipoor, Mesolia marks the district of Masulipatan; Cocola is undoubtedly Cicacole; and Cofamba answers in situation to Balasore. Near the mouths of the Ganges were feated the Calinga.

[·] See Afiatic Refearches, vol. i. p. 257.

Calingæ. A city denominated Calingipatam is marked on Mr. R.'s map; and it is not impossible that the once-impregnable fortress of Callinger, in the Soobah of Allahabad, of so great antiquity, that the Ayeen Akbery says,* " no one can tell by whom it was founded," might have owed to them its name and existence.

The Ganga Regia of Ptolemy, Mr. R. informs us, has been supposed to be Gour or Lucknowti, whose extensive and stupendous ruins feem to justify the affertion; and higher up on the main stream of the Ganges the two most potent nations of India, the Gangarides and the Prasii, or, as Ptolemy calls them, Prasiatæ, had their residence. Athenagarum, from its fituation, Mr. R. supposes to be Oude; the Uxentius Mons, the hills of Bundelcund and Bahar; Maliba, Matura; Panaffa, Panna, the famous diamond mine: and Palibothra, Pataliputra, or Patna. Of the Gangarides, who are fometimes called Callingæ Gangaridæ, from being intermixed with the Calingæ, Gangia Regia was probably the capital; but the great city of Palibothra, which not only gave law- but name to a valt furrounding district, was the celebrated L 2

^{*} Ayeen Akbery, vol.ii. p. 36.

celebrated metropolis of the Prasii. They were, indeed, frequently denominated thence Palibothri, and their king Palibothrus; and so formidable were they in the field, that the soldiers of Alexander, as we have before hinted, terrified at the accounts brought to them of their intrepidity and resources, refused to pass the Hyphasis, and advanced to the banks of the Ganges, even when within twelve days march of that river.

With respect to the nations that inhabited the inland regions of the peninfula, nothing decifive can be afcertained concerning them from the accounts of authors commonly called claffical; for, as the Greeks had very imperfect and inadequate ideas of the parts of India which they did traverse, it is not to be supposed they could arrive at any very authentic information concerning the parts which they did not explore. To this dearth of geographical knowledge, their total ignorance of the Indian language not a little contributed; and their fondness for moulding foreign names to a Grecian form has added much to the confusion in which both the history and geography of that people are involved, This custom was so prevalent among them, that Sir William Jones has remarked that

that there is hardly an' Afiatic word, befide ' Por, or Porus, which they have not corrupted. Who, indeed, could have imagined, that out of Ucha, * the name of an Indian nation, Oxydracæ, a compound Greek word, fignifying farp-fighted, should have been formed and applied in their history to that people; that Gogra fliould be converted into Agoramis; and Renas into Aornus? By indulging their fancy in this romantic manner, they have thrown difficulties, almost insuperable, in the way of the geographer and the historian; and they have nearly defeated the end which their vanity had in view, by obscuring their brightest exploits, and giving their victories almost the air of fiction. Instead, therefore, of engaging farther in useless discussions relative to the names and fituation of the various inferior cities of ancient India, let us direct our attention to the capital; an object at once magnificent and interesting, and of which their accounts are more particular as well as more uniform.

[.] See, on this subject, Afiatic Researches, vol. i. p. z.

CHAP. II.

Of the Extent and Grandeur of the City of Palibothra, the supposed Capital of uncient India, according to the classical Writers of Greece and Rome. — The Accounts given by Oriental Writers of the Magnificence of Canouge, its Metropolis in less remote Æras. — A short bistorical Account of the Capitals of Delbi, Labore, and Agra.

THE riches, the splendour, and magnitude, of a capital are the most decisive proof of the extended commerce, the power, and consequence, of an empire. In reviewing the ancient glory of each successive metropolis of India, we shall be led to admire the genius and industry of that celebrated people, and the wisdom and policy of their governors, who raised it to that degree of superior eminence.

Although it be now determined that Palibothra and Canouge were not the same capitals, yet the circumstances that led to that conjecture are very strong, and deserve some notice.

Palibothra is placed on the map * of Ptolemy in the 27th degree of north latitude: in Mr. R.'s map Canouge is fixed in latitude 27° 3', an inconfiderable difference indeed, when we recollect that the one is the most ancient and the other the most modern map extant. Indeed it is worthy of remark, and greatly to the honour of Ptolemy's fidelity, that, on a comparison of the latitudes of five different places between the Indus and Ganges, Mr. R. found the greatest difference to be only twelve mirutes between the latitudes of that geographer and his own. Palibothra, he observed, in the former edition of his Memoir, + is placed by Ptolemy between the towns of Maliba on the west and Athenagarum on the east. The latitude given for Palibothra is within three miles of that of Canouge: now the latitudes of Maliba and Athenagarum are nearly those of Matura and Audiah, or Oude; and the proportional distances of the former from Palibothra answer minutely to those of the latter from Canouge.

L 4

But

Ptolomai Geograph. Afia, Tab. 10.

⁺ Memoir, first edition, p. 42. a

But the great circumstance that seemed to place the supposition of Mr. R. beyond all doubt was, the relation given us of the aftonishing opulence and splendour of Palibothra in all the ancient writers of foreign extraction, and the corroborating testimony of the native historians of India, in regard to Canouge, who, in their description of this great city, fill us with the loftieft notions of its power, extent, population, and grandeur. Mr. R. has prefented us with a curfory account of both those cities; but I shall take a more extensive retrospect of the history of those celebrated places, and consider what may be collected from writers of most ancient date, compared with more modern accounts. Pliny, speaking of the capital of the Prasii, fays: " Omnium in India prope, non modo in boc tractu, potentiam claritatemque antecedunt Prafii, ampliffima urbe ditiffimaque Palibotra." . Ptolemy denominates it Παλιβοθρα Βασιλείον, the royal Palibothra; and Strabo, + from the account of Megasthenes, who had been there, particularizes its fituation, extent, and dimenfions. He afferts that it was fituated at the conflux of another river with the Ganges; that its figure was quandrangular; that in

Plinius, lib. vis cap. 19. + Strabo, lib. av. p. 667.

length it was eighty stadia, in breadth fifteen stadia; that it had a fortification of wood, with turrets for the archers to shoot from, and was furrounded by a vast ditch, as well for the fake of defence as to receive the filth of so large a city.

Arrian * calls it μεγιζην πολιν Ινδοισιν, the greatest city among the Indians; and adds, that it was fituated at the point of confluence of the Erannaboa and the Ganges. By the Erannaboa he is supposed to have meant the Jomanes, and he writes the word Palimbothra. He gives the same number of stadia for its length and breadth as Strabo; mentions the prodigious fosse, whose breadth was & Eanh& Poor, Sex jugerum, and forty-five feet deep, that there were on its walls five hundred and seventy towers, and that it had fixty-five gates. Such is the account given of the city itself by those ancient geographers, by Pliny and Arrian.

Of the vast power and military forces of the reigning fovereigns of Palibothra we find particular mention made in the historians Diodorus Siculus, in Curtius, in Justin, and Plutarch, from whose accounts we should be led to think that the kings of the Præsii and Gangarides, on any national emergency, constantly united their armies, or at least were joined in the strictest bonds of alliance, for their names are invariably mentioned together. The king of the Gangarides was most probably a rajah tributary to the supreme rajah of Palibothra, or, as was formerly conjectured, Canouge.

- Diodorus * informs us, that, when Alexander had passed the Hyphasis, he was informed, that, if he continued his progress towards the Ganges, after croffing a defert of twelve (Curtius fays eleven) days journey, he would meet on the banks of that river the most formidable fovereign of India, called Xambranes, king of the Gangarides, a name which feems here intended to include both nations, at the head of an army of twenty thousand horse, two hundred thousand foot, two thousand chariots of war, and four thousand fighting elephants. Curtius calls + the king of the Gangarides and Pharrafis, by which he must mean the Prasians of other writers, Agrammes, afferts that he guarded the frontiers of his dominions with twenty thousand horse and two hundred thousand foot, and that he could bring into the field 2000 two

[.] Diod. Sic. lib. xvii, p. 678. + Curtius, lib. ix. cap. 2.

two thousand chariots and three thousand elephants. Plutarch * computes the power and forces of these mighty kings at a still more extravagant rate; for he fays, their combined army amounted to eighty thousand horse, two hundred thousand foot, eighty thousand armed chariots, and fix thousand elephants of war. Convinced that the magnitude of these forces would appear incredible to his readers, he affures them it was no idle report; for that Sandrocottus (the Sinfarchund of Ferishtah's Indian history), who was then but a youth, and faw Alexander in his camp, some years afterwards conquered all these countries with an army of fix hundred thousand men; and bought the friendship of Seleucus, the successor of Alexander, with a present of five hundred elephants. Sandrocottus told the ambasadors of Seleucus, that the prince at that time reigning was detefted for his cruelty and despised for the meanness of his extraction; and that most probably, if Alexander had pushed on to the Ganges, he would have been victorious over him, from the general diffaffection that reigned among his troops. Curtius Curtius * relates the same circumstance of Agrammes, which word is perhaps only a corruption of Xambranes; adding, that his father was of the basest rank of plebeians, and with great difficulty subsisted by following the occupation of a barber; but that having, from the beauty of his person, attracted the notice of the reigning queen, she had exalted him to a share of her bed; in return for which instance of royal condescension, the ungrateful wretch had murdered his sovereign, usurped her kingdom, and massacred the lawful heir of the throne, to make way for the elevation of his own son to empire.

Justin + gives to Alexander the honour of conquering the Gangarides, but mentions another nation by the name of Cuphites (Grævius his commentator thinks it should be Sophites, but both are probably mistaken in the name), who were ready to engage him with two hundred thousand horse, but with whom his harassed soldiers refused to sight, demanding to be led back to their native.

^{*} Caerum qui regnant, non medo ignobilem effe fed etium ultime fertis: quippe patrem ejus tonfarem win diarno quaffu propulfantem famam. Curtius, editio Snakemb, tom. ii. p. 679.

⁺ Justinus, lib. xii. cap. 8.

native country, that their mangled and emaciated carcafes might at last find rest in the sepulchres of their fathers.

But it is now time to inquire whether the accounts given us of Canouge, by the Oriental historians, in any degree equal the lofty de-

scription of Palibothra above-recited.

The fame elegant and learned Abul Fazil, who, at the command of Sultan Akber, compiled the Ayeen Akbery, also translated, by the defire of his mafter, the famous Indian historical poem called the Mahabbarat, or History of the great War. In the Mahabbarat, Owde, the capital of a province of the fame name to the north-east of Bengal, is faid to have been the first regular imperial city of Hindostan. It was built in the reign of Krishen, one of the most ancient rajahs, a name which is likewise applied to a deity of the Hindoos. "That ancient city," fays Sir W. Jones, in the Afiatic Refearches,* " extended, if we may believe the Bramins, over a line of ten yojans, or about forty miles; and the present city of Lucknow was only a lodge for one of its gates. It is supposed to have been the birth-place of Rama."

The

^{*} See Afatic Refearches, vol. i. p. 259.

The Ayeen Akbery * reports Owde to have been in ancient time 148 coss in length and 36 coss in breadth. According to the Mahabbarat, Owde continued the imperial city during the space of about sisteen hundred years, when one of the princes of the dynasty of the Surajahs, a race who boasted their name and descent from the Sun, erected upon the banks of the Ganges the great city of Canouge, the circumference of whose walls is there said to have been sifty coss, or one hundred miles.

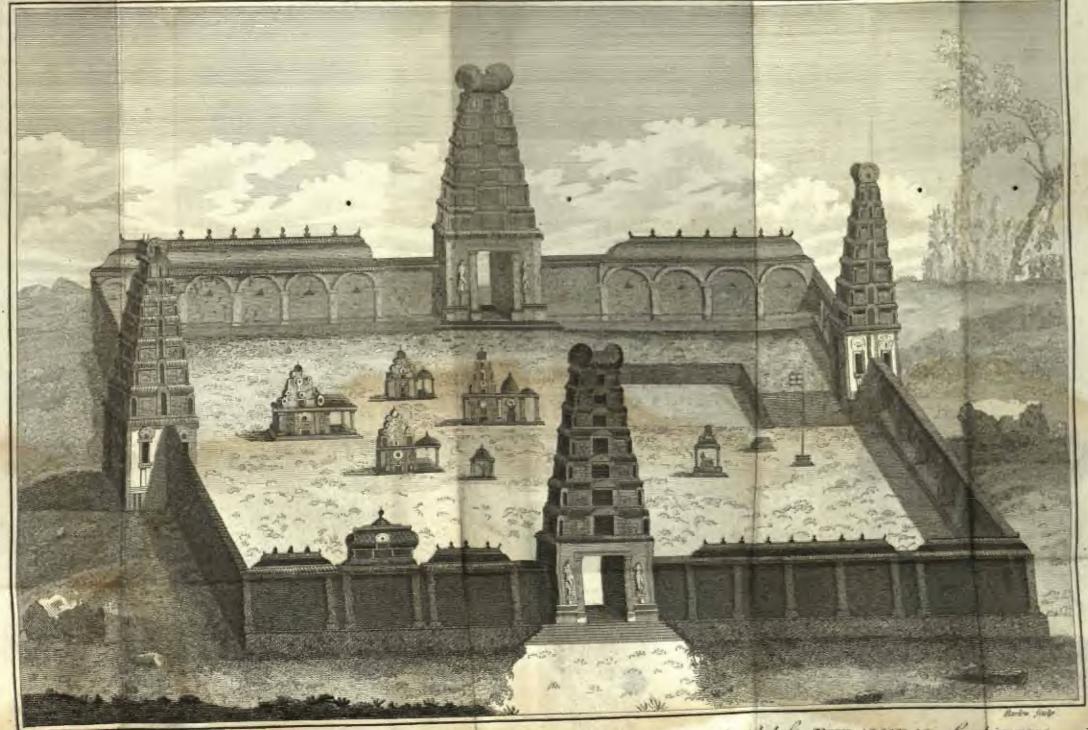

This event took place about the year 1000, before the Christian æra. The simple and pure worship of the Deity, prescribed by Brahma, is said about this period to have degenerated into an idolatrous veneration of the host of heaven and the elements of nature. Temples and images were erected, and sacred rites instituted, in honour of the memory of heroes eminent in arts or successful in war; and Canouge was adorned with the lofty edifices raised by royal vanity and vulgar superstition.

Sinkol, a native of Canouge, and the third emperor in succession after the extinction of the dynasty above-mentioned, is asserted, in

the

[.] Ayeen Akbery, vol. ii. p. 41.

A magnificent PAGODA on the coast of COROMANDEL;

built quadrangular to correspond with the four CARDINAL POINT S, and with lofty PYRAMIDAL Galinarys, symbolical of the ancient superstitious worship, so predominant in ASIA, of the SOLAR ORB, & ELEMENTAL FIRE.

the same book, to have kept up an army, whose magnitude greatly exceeds, in the number of foot and horse, the forces enumerated by Plutarch; and in that of elephants, it is remarkable, exactly equals the amount stated by Diodorus Siculus. Sinkol brought into the field against Affrasiah, king of Perfia, four thousand elephants of war, a hundred thousand horse, and four hundred thousand foot; a force which, except in the number of elephants, ought not to be thought incredible, fince (not to mention Xerxes's million) Timur is acknowledged to have had at one time nine hundred thousand men in the field; fince Autengzeb, in this century, maintained a standing force of five hundred thousand men; fince the army which followed Mahommed Shah to the plains of Karnal was so vast as to defy computation, and, according to the strong expression of a modern writer, " to be famished by its own numbers;" and fince a Soobahdar of the Decan, almost in our own times, could bring into the field an army of eighty thousand horse and two hundred thousand foot.

The fon and fuccessor of Sinkol dying without issue to inherit the throne, we are told Canouge was involved in civil distractions:

tions: but afterwards we find Delu, the founder of Delhi, reigning in peace and fplendour upon its throne, till invaded by the usurper Foor (the father of that Porus who was the antagonist of Alexander), who took him prisoner, and ravaged his metropolis, but seems not to have made it the seat of his empire.

Sinfarchund, or Sandrocottus, the successor of Porus, who took advantage of the convulled state of the empire, occasioned by that invasion, to raise himself to the throne, at the head of an immense army, restored to Canouge the honour of being the capital of Hindostan, and received there the ambassadors of Seleucus, the fuccessor of Alexander, among whom was Megasthenes, the principal negotiator between the two monarchs, about three hundred years before the Christian æra. Jona, the second in succession from Sinfarchund, is faid not only to have reigned himself in great tranquillity at Canouge, but his posterity afterwards are related to have peaceably possessed the throne during a period of ninety years.

Callian Chund, a warlike and fanguinary prince, who reigned over Hindostan about 170 years before Christ, and may possibly be the Demetrius of Justin,* is said in Ferishtah to have been driven, on account of his tyranny, from the throne, by a general insurrection of the rajahs dependent upon his authority. With him the regular empire of India may be said to have fallen; for, after this event, many years of discord and anarchy ensued, and each more powerful rajah became alternately a competitor for the supreme au-

thority.

A long period of obscurity in the history of the kings of Canouge now facceeds; but in this dearth of Indian history we may derive a glimmering of information from the Roman annals; where we are informed, that, in the time of Augustus, an Indian embassy arrived at Rome from a monarch of the name of Porus, who boafted in his letters that fix hundred kings or rajahs were tributary to him; which, if true, could only be true of the supreme lord or emperor of Hindostan. Now Jona in Ferishtah is faid to have been a grand nephew of Foor; and it is not impossible that one of the same family might have headed the rebellious rajahs, and fixed the supreme dominion once more in his own martial line. This disquisition, however, more properly M VOL. I.

. See Justin, lib. xli. cap. 6.

properly belongs to the general history of India, than to this abridged account of Canouge and its kings. I shall therefore pass on to the reign of Basdeo, that monarch, who, according both to Perfian and Hindoo writers, entertained in this capital Baharam Gore, king of Iran, or Persia, who had come, in the difguise of a merchant, to explore the truth of what he had heard concerning its vast opulence and the grandeur of its monarch. In the neighbourhood of this city he is faid to have met with a wild elephant, who in the feafon of lust had rushed furiously from the woods, and, attacking Baharam, was flain by him. The celebrity he acquired by this feat was the means of his introduction to the notice of the king. at whose court he was known by some nobles who had been in Perfia, and reluctantly constrained to assume his proper character, in which he was treated with the utmost magnificence, and in the end espoused the only daughter of the Indian monarch.*

Who were the two Phraotes, father and fon, who reigned in India when Apollonius Tyanæus, according to his biographer Philostratus, visited that country in the first cen-

. tury,

Mirkhond agud Texcira, p. 138, and Ferishtah, p. 13.

tury, the fcanty records we have of Indian affairs at this period will not guide us in determining; they were, however, probably among the number of those more formidable rajahs, who, during the civil commotions, role to the imperial diadem. The fame Philostratus informs us, that the kingdom of the ancient Porus, on the western side of India, was at the fame time governed by Mandrus. I take the kingdom of Mandrus to have been that of Delhi, which was about this time rifing into great eminence as the rival metropolis of Ca-

nouge.

Leaving for future confideration the dubious names and characters of the fuccessors of these princes in the fovereignty of India, mentioned either by Indian or Roman historians, we come to the reign of Rhamdeo Rhator, or the Maratta, who in the beginning of the fifth century, after a campaign of five months, having fubdued near FIVE HUNDRED rebellious rajahs and zemeendars, entered Canouge in all the pomp and triumph of a conqueror. In memory of his victories, he made a magnificent festival for his army in that metropolis, and divided among his foldiers the spoils of the vanquished rajahs, distributing to each forty pieces of gold, and throwing to the populace

M 2

a third part of the amazing booty. He reigned fifty-four years in Canouge, and feems to have established the empire on a new and more permanent basis.

The last king of Canouge, considered as the metropolis of a great empire, was Maldeo, who likewise added the kingdom of Delhi to his dominion. In his reign, that is, in the beginning of the fixth century, we are told that this city was grown so populous, that there were in it thirty thousand shops in which areca or beetle-nut,* which the Hindoos almost universally use as the Europeans do tobacco, was sold; and sixty thousand bands of musicians and singers, who paid a tax to the government, resided there: from which circumstance we may judge of the great extent, and, it may be added, the diffipation, of this renowned capital.

From this period we read no more of Canouge as the metropolis of Hindoftan; for, Maldeo dying at the end of forty years, and having no iffue, every petty rajah again rendered himfelf independent in his govern-

ment.

^{*} In the Ayeen Akbery it is faid, that the Soobah of Agra, in which Canouge flands, is remarkable for producing very excellent beetle-leaf. In the fame book, under Sircar Kinoje, (p. 41,) the reader will notice Puttyaly and Puttyalypoon.

ment. It still continued, however, a very magnificent city; its rajah possessed the first rank, both of civil and military distinction; and we find his name particularly mentioned among the five great rajahs who united to oppose the first invasion of Subuctagi, or Sabektekin, as the Arabians, and D'Herbelot after them, write the word. When Sultan Mahmud Gaznavi, about the year 1000, penetrated through the mountains of Tibet; and invested Canouge, he is said there to have feen a city which raifed its head to the firmament, and which in strength and structure might justly boast to have no equal. We are informed that its reigning fovereign, Rajah Korrah, affected to live in great pomp and splendour, but that, not being prepared for so unexpected an attack, he surrendered himself and his city to the sultan, who staid in Canouge three days. Thus Canouge at length became an appendage to the great empire established by Mahmud, from its capital Gazna, called Gaznavide; and we read little more of it worthy notice in the domestic history of India.

Turning to the Ayeen Akbery, and looking for Canouge, under the Soobah in which

M 3

it is fituated, I find nothing descriptive of its antient extent and grandeur, but only the corroborative intelligence, that, " in ancient times, Kinoje was the CAPITAL city of Hindostan:" nor is there any historical account, as usual, added to the short geographical sketch of the province. There is, however, a valuable fragment of history annexed to the account of the Soobah of Delhi, which will be of material fervice to me in the subsequent pages: and in that history there is an allusion to a fovereign of Canouge, which feems to prove, notwithstanding the evidence I have cited to the contrary, that so late as the year 588 of the Hegira, or A. D. 1102, the rajah of Canouge was still the supreme sovereign of the empire of Hindostan. Indeed it expressly affirms it of Rajah Jychund, the prince then reigning; but whether that prince afcended the throne by hereditary right or by violence is not to be afcertained. It is indeed a beautiful story, and, though somewhat romantic towards the conclusion, fully proves the absolute dependance of all the inferior rajahs upon the monarch of Canouge. This, however, is by no means the only evidence which that book supplies in favour of the fupposition that Canouge was once the imperial

perial city, not only of a valt kingdom on the Ganges, as is conjectured by Mr. Rennel, but of all Hindostan. Although the rajah of Guzzurat, as that gentleman obligingly informed me, might have been the Balhara of Edrifi, yet that, in the early periods of the Hegira, even the remote kingdom of Guzzurat was dependant on the fovereign of Canouge is manifest from the history there given of that Soobah, in which it is expressly afferted, upon the authority of Hindoo annals, that in A. H. 154, Bunfrai became the first independent monarch of Guzzurat, and that the earliest effort of his rebellion was the act " of feizing " the royal treasure which was going to Canouge," If the historical accounts in the Ayeen Akbery are not to be depended upon, where is authenticity to be found? We must at least be guided by them until we can obtain others more genuine; and I shall ever be happy to improve and correct my history by them, when in my power to acquire more certain documents.

The Oriental writers are extravagant in their accounts of the immense wealth acquired by Mahmud in his expedition against M 4 Canouge.

[·] Ayeen Akbery, vol. ii. p. 89.

Canouge.* They fay that India was then divided among feveral kings, of which one who had the title of Balhara, a word fignifying king of kings, and reigned at Canouge, was the chief. They affirm the conquest of the kingdom of Balhara, which at length he accomplished, to be the most illustrious of all his exploits; and enumerate the immense wealth and the incredible number of flaves he carried back to Gazna. D'Herbelot, in copying those writers, as I shall hereafter, prove, has mis-spelt the word Kinoje;+ he writes it Kifraje, and has led the authors of the Modern Universal History, who verbally translate the article from the Bibliotheque Orientale, into the fame error.

Sir William Jones, ‡ speaking of this part of India, says: "The ancient system of government which prevailed in this country seems to have been perfectly feudal; all the territories were governed by rais, or rajahs, who

Sherifeddin, in his Life of Timur Bec, mentions a Persian history of Wahmud's Indian incursions, called Yemini, which purticularly celebrates his conquest of Canouge. Timur Bec, vol. ii. p. 79.

[†] See D'Herbelot on the article Mahmud Gaznavi; and the Modern Univ. Hift. vol. iii. p. 178, first Swo. edit.

f Short Hift. of Afia, p. 30.

who held their lands of a supreme lord called Belhar; the feat of whose residence was the city of Canouge, now in ruins." The passage in the Ayeen Akbery, referred to above, exhibits a curious proof of this feudal dependance of the subordinate rajahs, and the necessity of their paying homage in person, at stated periods, to the supreme Belhar; for, at a great festival or facrifice called Raisoo,* at which all the rajahs of Hindostan were obliged to attend, and of which the meanest offices, "even to the duties of the fcullery," were performed by rajahs; Pithowra, the rajah of Delhi, from contempt of the fovereign, not attending, " that the festival might not be incomplete," an effigy in gold of the absent rajah was formed, and, by way of retorted contempt, assigned the ignoble office of porter of the gate. The rashness of Pithowra in the end cost him his crown and his life.

The ruins of Canouge, Mr. Rennel obferves, are even at this day of very great extent; and, from the evidence thus collected together, and apparently inapplicable to any other place on that fide of India, it appeared to me fufficiently manifest that Canouge

^{*} Raifoo, the fame feaft of which we read in the Mahabbarat.

Canouge was indisputably the Palibothra of the ancients. That idea, however, being now abandoned, we can only solve the difficulty by supposing, with the Memoir, that it is possible both cities might have been occasionally used as capitals of the Prasii, as Delhi and Agra have been in the later periods of the empire in general; and that, in the accounts given of them by foreigners, they have been frequently consounded together, or the one mistaken for the other.

The city of DELHI, according to Ferishtah, was founded by DELU, the usurper of the throne of Hindostan, about 300 years before the commencement of the Christian æra; but, according to the more probable account of the Ayeen Akbery,* Aurungpaul, of the Tenore tribe, was its real founder, in the year 429 of the æra of Bickermajit, an æra not greatly diffimilar from that of Christ. It was for a feries of ages governed by its own rajahs, who feem to have had confiderable weight in the empire, and to have been very active in repelling both the ancient Persian and more modern Mohammedan invaders of Hindoftan. They were descended from, and were for some time

[.] Ayem Akbery, vol. ii. p. 118.

⁺ Bickermajit flourished in the first century of the Christian era.

time tributary to, the great rajahs of Lahore, of the race of BAL, or PAUL, a name celebrated for valour in the heroic histories of the country: this family is denominated Jeipal by Ferishtah, but Gebal by D'Herbelot, from other historians of the Gaznavide Sultans. By this appellation the latter diffinguishes " le plus puissant roi de l'Indostan;" and in another place calls him, " Bal, fils d' Andbal, estime le plus riche et le plus puissant roi de TOUT L'INDOSTAN." I think there can hardly be a doubt, when we confider their great military fame and their place of refidence. but that this long, hereditary, and illustrious, race of Bal, or Paul, was the fame as that of Porus, so often mentioned by classical writers. I am aware, however, that Bal (whence the word Bal-hara,+ or the greatest lord, is formed) may be only a title of regal distinction. and was fometimes usurped by the fovereigns of other Soobahs. Twenty princes of this line are particularly faid, in the Ayeen Akbery, to have enjoyed in regular fuccession, for 437 years, the throne of Delhi, not yet imperial.

[.] Bibliotheque Orientale, p. 354-

⁺ BALHARA is derived either from the Persian Balla, high; or the Arabic Bal, ford; Maha, mighty; and Rat, or Raja, forereign. Many Persian words are blended with Sanscreet.

rial. An extensive territory to the north and fouth of Delhi was subject to the control of its rajah, fince we read in Ferishtah, that the ancient and hallowed cities both of Tannafar (the Tanasis of Ptolemy) and Muttra, or Matura, (the Methora of Pliny,) fituated only thirty-fix miles north of Agra, and still a confiderable city, were under his jurifdiction and protection. The last of its native princes, according to the Ayeen Akbery, was Pithowra, from whose family it was conquered by the Mohammedan flave Cuttub, or Cothbedden Ibek, as he is called by Herbelot, who made Delhi the capital of the vast empire which he established in Hindostan. The prince from whom it was immediately taken is faid by Ferishtah to have been called Candi; and, as whenever I quote this author I always feek for collateral evidence, in Marco Polo's Indian Travels I find mention made of a rajah of the same name, who is affirmed to have been the chief of the four great kings who then reigned in the peninfula. Candi loft his throne nearly at the expiration of the twelfth century: * Marco Polo vifited India about the middle of the thirteenth century; and it is not improbable that the exiled family, though unable

[.] See his Travels in Campbell's edition of Harris, vol. i. p. 621.

unable to oppose the torrent of Mohammedan fuccess, might still retain sufficient vigour and resources to secure a respectable territory in the fouthern regions of that extensive country. That the descendants of the race of Bal 'did retire fouthward, from the exterminating fury of the Mohammedans, feems to be apparent, from what Mr. Chambers, in the Afiatic Refearches, has related concerning the extensive and ruinous remains of a vast city near Sadras. on the Coromandel coast, now called Mavalipuram, but which he contends in Sanfcreet might have been written Mahabalipur, or the city of the great Bali. The greater part of thefe ruins has been corroded and washed away by the violent inroad of the fea, on whose border they now stand; but from which it is probable they were in former ages situated at a confiderable distance. The more ancient inhabitants of the place now living remember when a far greater number of pagodas than at present appear raised their heads above the water, which, being covered with copper, and probably gilt, reflected the rays of the rifing fun, and diffused a glory over the ocean, that feemed to indicate how wide, and at the fame time how magnificent, where the ruins it concealed. A city alfo, called Balipatna, stands on the Malabar coast, which may be considered as an additional proof to what is recorded in D'Anville, from Edriss, of the extensive power and dominion of this very ancient race.

While I am upon the subject of these ancient monuments of Indian grandeur, foeagerly and fo laudably investigated by the gentlemen who compose the Asiatic Society at Calcutta, as containing irrefragable testimony in support and elucidation of many great historical but doubtful points, fuch as occur in almost every page of the Indian annals, let me not forget to remark, that the same book contains a grant of land, bearing date twenty-three years before the commencement of the Christian æra, of one of the rajahs of this very name, who is styled Deb Paul Deb, equally instructive to the historian and interesting to the antiquary. Among much other curious and useful information, of which I hope hereafter to avail myself, this Paul is said to have been the fon of Dharmo Paul, who married the daughter of a celebrated rajah called Poro BAL; and the union of two fuch words in the fame name, and that the name of a rajah of eminence, will, I hope, rescue my former conjecture from any severe animadversions.

Delhi is fituated in latitude 28° 37'. If we may believe the Mahabbarat, it stands upon the fite of a most ancient city, called Inderput, in times justly reputed fabulous the metropolis of the country. The Ayeen Akbery, however, confirms this account, expressly afferting that Delhi is a very ancient city, " and was formerly called Inderput." Delhi rose to renown as the glory of Canouge declined. Its confequence as an imperial city increased with that of the Mohammedan dynasty, which bears its name, and it continued to flourish as one of the most splendid cities of Asia, and as the unfivalled metropolis of Hindoftan, under all the fultans of the Gaznavide, the Gauride, and Charazmian, dynasties. Each successive monarch adorned this envied city with fome fignal memorial of royal magnificence; it was furrounded with beautiful gardens and aromatie groves; and was filled with innumerable edifices, erected for the purpoles of commerce, appropriated to the diffusion of science, or devoted to the fanctities of religion.

At the period of the invasion of Timur Bec, Delhi is said to have arrived at a point of distinction in regard to its unequalled wealth and extended commerce, which it never after reached. Sherifeddin, the Persian historian of his his life, describes that capital * as confisting of three cities, which he denominates Seiri, Gehanpenah, and Old Delhi. Seiri was invefted with a ftrong circular wall; + Old Delhi, or the ancient Inderput, had likewise a circular wall, but far more confiderable in extent. Gehanpenah occupied the space between the two cities, and was confiderably larger than either: the walls by which it was fortified running on each fide in parallel lines, and connecting the two former cities. The metropolis, thus formed of three great cities, foread over a very wide extent of ground; and, according to Sherifeddin, had no less than thirty, others fay fifty, gates. It was celebrated, he informs us, for a mosque of astonishing dimensions, and for a palace of admirable magnificence, which was erected by Malek Iona, an ancient king of India, and was ornamented with a thousand marble columns. I

The

^{*} See Sherifeddin's Timur Bec, vol. ii. p. 67.

⁺ In the Ayeen Akbery Seiri is faid to have been built by Sultan Alladeen.

t Mr. Finch, ope of the first and most respectable visitants of India in the last century, in describing the ruins of Old Delhi, particularizes the remains of this august pile, which at that period, (1609.) little more than 200 years after Timur's invasion, was mouldered away to what he calls "a mere carcase, worn out, and disfigured to the last degree." Harris's Voyages, vol. i. p. 38.

The Persian authors are lavish in their praises of this great and beautiful metropolis. The feat of voluptuoufness, and the central repofitory of whatever the vast traffic, carried on by the Indian merchants with Persia, Arabia, and China, produced, it abounded with coffly rarities of every kind; the tribute of the most distant climes, the labour of the most skilful artificers. But a favage conqueror now approached, before whom the pride of India and the delight of her fovereigns must bow the head. Through a deluge of human blood, fhed in his progress from Samarcand to India, and fresh from the unprovoked massacre of 100,000 captive Hindoos, who were left expiring almost beneath its walls, the merciless Timur pressed on to its destruction. He entered the city in triumph, on the 4th of January, 1399. The great standard of the Tartarian empire was immediately erected on its walls; and the usurper, seated upon the throne of India, in all the pride of conquest, received the prostrate obeifance of the nobility of both nations. The royal elephants and rhinoceros, adorned with rich trappings of gold and filver, were brought to the foot of the throne, and, instructed by their leaders, made the falaam of gratulation. Some days were confumed in rewarding VOL. I.

rewarding with fuitable honours the princes and generals of the victorious army, in banquets of unbounded magnificence, and in infulting heaven with the grateful vows of fuccessful tyranny. At length, on some resistance reluctantly made by the inhabitants to the wanton outrages of their conquerors, Delhi, and all the wonders it contained, was given up to be pillaged by an enraged foldiery; and, on the 13th of the same month, " that great and proud city was deftroyed." We may form fome judgment of the enormous booty obtained in this general pillage, from the account given by the same author of the number of flaves made captive, and of the immense quantities of precious stones, pearls, rubies, diamonds, gold and filver veffels, money, and bullion, carried away by the army. Even the Indian women and girls are faid to have been adorned with a profusion of precious stones, and had bracelets and rings of gold and jewels, not only on their hands and feet, but also on their toes. Of these precious ornaments every individual had fecured to ample a store, that they refused the incumbrance of more, and vast heaps of various plunder of inestimable value were left behind. These are nearly the words of the Persian author, who bears

bears the strictest character in the East for veracity, and who was cotemporary with the monarch whose history he relates.

Under the dynasty of kings that immediately succeeded the invasion of Timur, Delhi soon recovered its pristine splendour and importance as the imperial city of Hindostan. In the course of a sew ages that city became again crowded with many majestic monuments of Patan grandeur, in mosques, baths, and caravanseras; and the sepulchres of its deceased monarchs of that line, as well as of many other holy and illustrious men, whose names are enumerated in the Ayeen Akbery, presented to the eye of travellers an awful and striking spectacle.

When Baber, advancing from his imperial city of Cabul, on the north-west frontiers of Hindostan, had overturned the power of the Patans in the person of Ibrahim, the court resided alternately at Agra and Delhi. The usurper Shere, who during his short reign crected throughout Hindostan many stately edifices, and, among others, that superb maufoleum in Bahar,* in which he lies interred,

N 2 pulled

This noble monument of the magnificence of Shere still remains entire. It flunds in the centre of a grand artificial lake, nearly a mile in length. There has been lately published an elegant engraving of it, from a painting by Mr. Hodges.

pulled down the ancient town of Seiri, and built a new city on its foundation; which, however, when Abul Fazil, who relates this fact, wrote the Institutes of Akber, was for the most part in ruins. Homaion, on his restoration to that throne, which Shere and his family had fo long usurped, laid the foundations of a new and magnificent palace at Delhi, which he did not live to finish; but meeting his fate shortly after in that city, from the effects of too powerful a dose of opium, was himself buried on the banks of the neighbouring Jumna, where a noble monument was erected over his remains by the great Akber, his fon, and fuccessor in the imperial dignity. That most renowned of all the fovereigns of the house of Timur contributed no otherwise to its ornament; but, on the contrary, by fixing his refidence for the most part at Agra, and lavishing such immense fums on the structure of its castle, and on the stupendous erections at Secundra in its neighbourhood, completed the ruin which time and neglect had united to spread through the wide circumference and amidst the desolated towers of Delhi.

Notwithstanding the astonishing sums expended by Akber on the palace, or rather the castle,

castle, of Agra, (for, all the Eastern palaces are built with a view to defence,) the fituation, upon a fcorched fandy foil, and under a more fouthern fun, was neither esteemed fo salubrious by his successors, nor so centrical for the command of the various provinces of the empire, according to its divisions at that period, (for, the fouthern parts of the peninfula were not yet subjugated,) as was that of Delhi. * The turbulent governors of the northern provinces bordering upon Persia were perpetually fomenting rebellions; and for their extinction were required the speedy, the effectual, and the concentrated, exertions of the supreme authority. Actuated partly by these motives, and partly by the desire of immortalizing his name, in the erection of a city that should exceed in grandeur all the other cities of Hindostan, Jehaun Shah, the grandson of Akber, in A.D. 1647, according to Fraser, rebuilt Delhi from the ground, and called the new city Jehaunabad, after his own name. He at the fame time constructed a palace not less distinguished for its spacious

Terry thinks this city, fituated in the heart of the empire, was called Delhi, or, as he writes it, Dellee, from a word in the Hindoftan language fignifying a heart. Dill is the Indian word for heart. It should more properly be written Dancy.

and splendid apartments, calculated for every purpose of state and luxury, than for the extent and beauty of the gardens with which it was adorned, where every odorous plant and beautiful flower of Asia at once feasted the eye with delight and filled the air with fragrance, where fountains of the purest water perpetually flowed, and where vast artificial caverns sheltered the fainting sugitive from the severe fervours of an eastern noon.

To enter into a minute detail of all the curiofities contained in this new city and this extraordinary palace, which was particularly famous for the throne erected by the fame prince, in the form of a peacock, with its tail expanded, and entirely composed of diamonds, emeralds, rubies, and fapphires, and of all the vast treasures amassed in this capital by that oftentatious monarch, as related by Bernier, Thevenot, and Tavernier. would be to swell these prefatory pages to a magnitude disproportioned to the body of the history itself. Referving, therefore, the remaining history of this famed metropolis for those more recent periods to which it properly belongs, I shall conclude this account of its ancient grandeur, by obserying,

in general, that, from the death of Shah Jehaun, till the year thirty-eight of the present century, Delhi continued to flourish in increased consequence and splendour as the capital of Hindostan. In that year, so fatal to the towering majesty of the Mogul monarchs in India, a barbarian, more deeply ftained with blood than even Timur himfelf, whose native ferocity of foul was aggravated and inflamed by the stings of infatiable avarice, entered the richest metropolis in the world, once more devoted its hapless inhabitants to unrestrained massacre, and plundered its fumptuous palace of the accumulated wealth of ages. According to Fraser's calculation, the invalion of Nadir cost Hindoftan 100 millions of pounds sterling and 290,000 lives. The feveral conquerors of this ill-fated city feem to have advanced progreflively in the scale of horrible enormity. A dæmon of cruelty yet remains to be noticed, whose unprecedented barbarities make humanity shudder, and whose outrages extended to the grave itself." Ahmed Abdollah, who, upon the death of Nadir, had erected into an independent monarchy the provinces bordering upon Persia on the one hand and upon Hindostan on the other, in the year 1756 N4

1756 marched into Delhi, which he gave up for three days to be pillaged by his foldiers, who, in levying their contributions, practifed every species of barbarity upon the wretched inhabitants; and, in their eager fearch for concealed treasures, scrupled not to violate even the fepulchres of the dead. Ahmed is supposed, on his first visit, to have carried away more riches, except in jewels, than Nadir himself; but, unsatiated with this grand booty, he returned to Hindoftan no less than fix different times during the short reign of Allum Geer. His fixth and last visit was in 1759 and 1765, when Delhi was again plundered, and that magnificent city, which for 500 years, with little intermission, had flourished as the capital of Hindostan, and, during the reign of Aurungzeb, was supposed to contain near two million of inhabitants, was totally ruined and almost depopulated.

We come now, in the words of Milton, whose geography was as accurate as his

poetry was fublime,

To AGRA and LAHORE of Great Mogul,

of which celebrated capitals, our account, from the extent of the preceding historical retrospect, must of necessity be compressed within

within the narrowest possible limits consistent with the professed design in giving that account.

LAHORE, or rather LAHOOR, is the capital of a large province to the north-west of Delhi, called by the natives Panjab; from PANJ, five, and AB, water, because watered by the five branches of the Indus. Lahore is marked on the new map as situated in the 31st degree of north latitude; and it stands on the banks of the Rauvee, the ancient Hydraotes. It is a city of such great antiquity, that if it be not in reality the Bucephala of Alexander, as, according to our former remark, has been supposed, it will be extremely difficult to six for certainty upon its founder; for the Ayeen Akbery is silent on the subject.

Lahore, lying on the direct road that leads into the heart of Hindostan, has ever been harassed, both in ancient and modern æras, by the armies of contending princes, and has experienced every viciffitude to which the alternate triumph and defeat of the sovereign can subject a capital. From the time of Alexander to the present day Panjab has been more deeply stained with blood than any other province of the empire; and the fre-

quent battles, that have been fought within its territory, have probably contributed to keep alive that ardour of fortitude for which its rajahs, and the subjects under their government, have been ever distinguished. They opposed with vigour the progress of the Macedonian invader. The generals of Valid were prevented, principally by the valour of those frontier warriors, from penetrating beyond Multan. It has been afferted, indeed, that the army of Valid, under Mohammed Cafim, fubjugated a confiderable part of Hindoltan; and it would appear fo from Erpennius's verfion of Ak Makin, where he fays, " Mobammed Indiam occupavit," but the contrary is evident, from an historical note which the late very learned editor of the Annals of Abulfeda has added, and which both affigns the cause and records the extent of that invasion.* Jeipal, the rajah of Lahore, during the repeated incursions of Subuctagi and his fon Mahmud, exhibited the most heroic proofs of bravery in the defence of his hereditary domain, which extended from Cashmire to Multan; and great indeed

^{*} See Abulfedæ Annales Muslemicæ, Arabice et Latine, per J. J. Relsk, tom. i. p. 427. Hafniæ, 1789: and Hist. Saracen. Elmacini, edit. Erpen. p. 84. Lugd. Bat. 1625.

indeed must have been the wealth he possessed, fince when, at length, after three defperate efforts, he was taken prisoner by the enemy, around his neck alone were found fuspended fixteen strings of jewels, each of which was valued at 180,000 rupees, and the whole at 320,000 pounds sterling. This fum, however, is trifling, compared with that which Mirkhond fays the fultan of Gazna, in his expedition against Jeipal, or Bal, as he calls him, and in a fecond against his fon Andbal (Ferishtah's Annindpal*), carried out of India. He states it at seven millions of coin in gold, seven hundred maunds+ of gold in ingots, together with an inestimable quantity of pearls and precious stones. Jeipal, when at length liberated, stung with the anguish arising from his late defeat and captivity, and partly impelled by those feelings, and partly in obedience to a custom then prevalent among the Hindoos, which forbade a rajah who had been twice vanquished by the Musfulmen longer to hold the

[·] Perishtah, vol. i. p. 41. Mirkhond apud Texeira, p. 250.

[†] The maund is a weight which varies in different parts of India. At Bengal, it is equal to feventy-four pounds and two-thirds; at Surat, to thirty-feven pounds and a half; at Madras, to twenty-five. The maund in Persa is considerably less.

the reins of government, refigned the throne to his fon. He then ordered a funeral pile to be prepared and kindled, and, leaping into the flames, died as heroically as he had lived.

Not to anticipate farther the events more largely and more connectedly recorded in the enfuing history, it will be sufficient to remark, in this place, that Lahore continued to flourish as a great, populous, and wealthy, capital under many of the succeeding Mohammedan usurpers of India, and in particular under the fultans Cofro, the first and fecond of that name, and the last of the house of Gazna, who, being driven from their former capital by Mahomed of Gaur, made Lahore the metropolis of their remaining empire. It was for some time the imperial city of Cuttub, who, afterwards extending his conquest eastward, found it neceffary to remove the feat of his empire to the more central city of Delhi. Deferted by royalty, Lahore lost not its splendour and importance; these were supported by the vast commerce which about that period it enjoyed above all the cities of Hindostan. The period, however, of its proudest distinction, as a commercial city, feems to have been

been that in which the traffic, at present carried on by the European settlements upon the coast of India, passed in caravans through the inland provinces of Asia, when Lahore, as well as Cabul, was crowded with merchants from all nations; and her bazars were furnished with the richest commodities, both of the Eastern and European world. To Lahore, as to a general store-house, were brought the costly silks of Persia, and the precious gums and drugs of Arabia, to be exchanged for the gems of India and the rich manufactures of China.

To its royal honours and distinction Lahore was restored by Homaion, who, both previously to the usurpation of Shere, and during the period of his exile from the throne, made this city his principal residence. He erected in it many stately edifices, and particularly the palace, which was uncommonly lofty, and which, according to Mr. Finch, who visited it in 1600, (nearly fixty years before Theyenot, whose description is more generally referred to,) had twelve noble gates; nine opening towards the land-fide, and three towards the river. The same author assirms, that the city was twenty-four cose in circumference, and, including the fuburbs, fix cofe

cose in length; which, taking the cose at a mile and three-quarters, is not greatly diffimilar from Thevenot's account of its extent in the time of Homaion: for, he states that extent at three leagues; although, at the period of his own vifit, it was diminished to one league. What Homaion had thus fplendidly begun, Jehaun Geer, who preferred this fituation to his father's fumptuous palace at Agra, completed in the noble ftyle of the defigner. The English traveller mentioned above refided here while those works, which were to make Lahore " the finest city of Asia," were advancing to perfection. He mentions the grand fosse at that time casting up round the whole circumference, and the strong wall about to be erected, which later travellers fay was of free-stone, flanked with towers, and guarded by numerous artillery. Jehaun Geer indeed could, better than the exiled Homaion, afford to perfect magnificent projects; for, at his coming to the throne, he found a treafury, as will appear hereafter from Mandello's correct account, fo full, or rather fo overflowing, with every species of wealth, accumulated during Akber's long reign of fifty years, as to appear inexhaustible. Mr. Finch's account

of the palace itself is too remarkable and particular to be omitted; and I shall therefore extract it as a specimen of that traveller's agreeable, spirited, and, considering the period when it was penned, I may add, elegant, manner of writing: " As for the rarities of the castle or palace, they are by far too numerous, as well as too glorious, to be justly represented by a short description; the mahls, the courts, the galleries, the rooms of state, are almost endless; and, to give an idea of the extravagant richnels of the furniture of thefe, it may be fufficient to fay, that, in the king's lodgings, the very walls and ceilings are overlaid with plates of gold; and the others are as prodigally rich and fumptuous in proportion. There are a vast number of stately pictures hanging up and down in the galleries and public rooms, all drawn at full length. Here is the whole royal family down from Baber, that made the conquest of India, to this present Mogul. Besides these, are all the principal noblemen * of the present government, the Mahometan omrahs and khans,

and

Sir Thomas Roe, who went ambassador to India in 1615, only fix years after Mr. Finch, relates some curious anecdotes, of which I shall take notice in their proper place, of Jehaun Geer's enthusiastic sondness for the art of painting. See Sir T. Roe's Journal, in Churchill's voluminous collection, vol. i. p. 64.

and the native Indian princes that are of any great power or figure about the king. For curiofities without, the king's garden may be reckoned among the chief: here India and Europe feem to lie together on the fame fpot, which presents the eye with the vegetable varities of both." * To this account of the fine paintings and rich but decayed furniture that adorned the palace of Lahore, Thevenot, and all the later travellers of the last century, bear ample testimony. M. Bernier, who was at this city in the fuit of the emperor Aurungzeb, whom he attended in the capacity of physician, and who dates from this place the third letter in his expedition to Cashmire, speaks of the palace as a high and magnificent structure, but hastening rapidly to ruin, as well as the city itself, from the long absence of the court. Excessive torrents of rain, he observes, had previously fallen, and had greatly contributed towards the demolition of the public buildings and forfaken palaces of the nobility; that still, however, five or fix considerable streets remained, of which two or three were above a league in length; but that the Rauvee, which, from its vast rapidity and occalional

[.] Harris's Collection of Voyages, vol. i. p. 88.

calional overflowing, had often caused great devastation, had changed its bed, and, to the great inconvenience of the inhabitants, at that time flowed above a quarter of a league from the city. A fimilar misfortune has befallen many of the ancient cities of Hindostan; for we are informed that Gour, once the capital of Bengal, which was in times past watered by the Ganges, stands now at the distance of five miles from the bed of that river; and that some parts of its extenfive ruins, formerly washed by its stream, are at present situated twelve miles * from it. The confluence of the Ganges and the Sone, which in remote periods took place at Patna, now falls at Moneah, twenty-two miles above that city. The Burrampooter has still more confiderably varied its course; and the very river, of which the Rauvee is only a branch, is faid by Strabo, on the authority of Aristobulus, in the earliest ages of antiquity, to have deviated many leagues from its usual channel, by that means leaving many populous cities destitute of the necessary bleshings of its waters, and turning a vast tract of cultivated country into a barren and fandy defert.

Vol. I.

U

AGRA,

AGRA, the AGARA of Ptolemy, though that city is by no means placed on his map in a degree of latitude corresponding with Agra on the modern map, which is marked in 27° 15', owed its importance, and indeed its existence as a capital, to the munificence of Akber. That emperor, pleased with its fituation on the bank of the Jumna, and probably incited by its proximity to his new conquests in the Deccan, from an inconfiderable fortified town, raifed Agra to an eminence in splendour, beauty, and renown, which no city in India, not even Delhi itself, had ever before enjoyed. This monarch had far advanced towards the completion of the proud structures of Fettipore. of which the remaining ruins prove the original grandeur, when on a fudden he relinquished them, to execute his more extensive projects at Agra. Indeed the projects of Akber were all vaft and comprehensive like the mind that formed them. In the important plans for which peace gave leifure, as well as in the more dazzling scenes of martial glory, his genius and his abilities feemed to foar alike fuperior to the rest of mankind.

Akber, having determined to make Agra an imperial refidence, ordered the old wall of earth, with which the city had been inclosed by the Patan monarchs, to be destroyed, and rebuilt with hewn stone, brought from the quarries of Fettipore. This undertaking, however confiderable, was finished with no great difficulty, and within no very protracted period. But to re-build Agra and its castle in a manner worthy of the defigner, and calculated to render it the metropolis of the greatest empire in Asia, required the unwearied exertions of one of the greatest monarchs whom Afia had ever beheld. For the full completion of his magnificent plan, Akber, by the promife of ample rewards, collected together, from every quarter of his dominions, the most skilful architects, the most celebrated artists in every branch both of external ornament and domestic decoration; and fome judgment may be formed of the prodigious labour and expense required . to perfect the whole undertaking, when the reader is acquainted, that the palace alone took up twelve years in finishing, kept constantly employed, during that period, above a thousand labourers, and cost nearly three millions of rupces. The castle itself, the largest 0 2

largest ever erected in India, was built in the form of a crescent, along the banks of the Jumna, which becomes at this place, in its progress to the Ganges, a very confiderable river; its lofty walls were composed of frones of an enormous fize, hard as. marble, and of a reddish colour, resembling jasper, which at a distance, in the rays of the fun, gave it a shining and beautiful appearance. It was four miles in extent, and it confifted of three courts, adorned with many stately porticoes, galleries, and turrets. all richly painted and gilded, and fome even overlaid with plates of gold. The first court, built round with arches, that gave a perpetual shade, so desirable amidst the heats of a burning chimate, was intended for the imperial guard; the fecond, for the great omrahs and ministers of state, who had their feveral apartments for the transaction of the public bufiness; and the third court, within which was contained the feraglio, confifted entirely of the flately apartments of the emperor himself, hung round with the richest filks of Persia, and glittering with a profusion of Indian wealth. Behind these were the royal gardens, laid out in the most exquifite tafte, and decorated with all that could

could gratify the eye, regale the ear, or fatiate the most luxurious palate; the lovelieft shade, the deepest verdure; grottoes of the most refreshing coolness, fruits of the most delicious flavour; caicades that never ceased to murmur, and music that never failed to delight. In the front of the castle, towards the river, a large area was left for the exercise of the royal elephants, and the battles of wild beafts, in which the Indian emperors used to take great delight; and, in a square of vast extent, that separated the palace from the city, a numerous army constantly encamped, whose shining armour and gorgeous enfigns diffused a glory round them, and added greatly to the splendour of the fcene.

But, if this palace was thus externally grand, what a splendid scene must its interior parts have displayed? Mandeslo, who visited Agra in 1638, and saw that city in the meridian of its glory, after informing us that the palace was altogether the grandest object he had ever beheld, that it was surrounded with a wall of free-stone, and a broad ditch, with a draw-bridge at each of its gates, adds,* that, at the farther end of

[·] Sec Mandello's Travels, in Harris's Collection, vol. ii. p. 118.

the third court, you faw a row of filver pillars under a piazza, and beyond this court was the presence-chamber; and this more spacious apartment was adorned with a row of golden pillars of a fmaller fize, and within the balustrade was the royal throne of mally gold, almost incrusted over with diamonds, pearls, and other precious stones; that above this throne was a gallery, where the Mogul appeared every day, at a certain time, to hear and redrefs the complaints of his fubjects; and that no perfons whofoever, befides the king's fons, were admitted behind those golden pillars. He mentions likewise an apartment in the castle very remarkable for its tower, which was covered with maffy gold, and, for the treasure which it contained, having eight large vaults filled with gold, filver, and precious stones, the value of which was inestimable. As I have ever esteemed the accounts given us of the internal parts of India by Bernier and Thevenot to be far more accurate and authentic than those by Tavernier, who travelled thither merely in a mercantile capacity, and possessed neither the leifure nor the opportunity, which the others enjoyed, to examine objects with attention, so I have in this work more generally tollowed

followed the relations of the former than the latter of those travellers. On all subjects, however, that relate to commerce, and the splendour and riches of the Eastern courts, which he admired fo much, and of which, as a merchant in gold and jewels, he knew fo accurately to calculate the value, he undoubtedly deserves the preference of citation. Tavernier, who vifited Agra in the decline of its glory near the end of the last century, in the absence of the court at Jehaunabad, obtained permission from the commanding omrah to visit; in company with a Dutch merchant, the infide of that splendid palace; and, among other proofs of its magnificence, makes particular mention of a gallery, the arch of which it was Shah Jehaun's intention to have overlaid with filver, and he had engaged an ingenious Frenchman to undertake the work; but, the artist being soon after poisoned, the design was drope. He describes the ceiling of that gallery as adorned with branched work of gold and azure, and hung below with rich tapestry. But there was also another most sumptuous gallery seen by Tavernier, which fronted the river; and which the same monarch had purposed to cover entirely over with a kind of latticework 04

work of emeralds and rubies, that should have represented to the life "grapes when they are green, and when they begin to grow red. But this defign, which made fuch a noise in the world, and required more riches than all the world could afford to perfect, still remains unfinished, there being only three stocks of a vine in gold, with their leaves, as the rest ought to have been, enamelled according to their natural colours, with emeralds, rubies, and other precious flones, wrought into the fashion of grapes."* This fplendid idea of Jehaun was not without parallel amidst the magnificence of Eastern courts; for, we are told by Herodotus, that Pithius, the wealthy Bythinian, made Darius a present of a plane-tree and a vine of gold. This vine, according to Athenæus,+ was adorned with jewels hanging in clusters, in form and colour refembling grapes, and fpread like a rich canopy over the golden bed of that monarch. But, without going to Persia, we find in Curtius, t amidft that luxuriant description, in his eighth book, of the state and

^{*} Tavermer's Indian Travels, book i. chap. 7.

⁺ See Heredot, lib. vii. and also Athengus, lib. xii.

¹ Quintus Curtius, lib. vili. cap. 9.

and pageantry of an Indian monarch, particular mention made of the golden vines that twined round those ornamented columns of the same metal which supported his palace, amidst whose branches artificial birds of silver, in imitation of those most esteemed in India, were disposed with the nicest art by the curious designer. But to return from the palace

to the city of Agra.

In a line with the palace, along the banks of the same river, were ranged the magnificent palaces of the princes and great rajahs, who vied with each other in adorning the new metropolis; the majestic edifices of which met the delighted eye, intersected with lofty trees, wide canals, and beautiful gardens. Determined to make it the wonder and envy of the East, and to bury both its former name and obscurity in equal oblivion, the fultan gave his own name to the rifing capital, and called it Akber-Abad, while he enriched it with the noblest monuments of regal munificence that human ingenuity could plan or human industry could execute. That nothing might be wanting to render it useful for every purpose both of religion and commerce, Akber erected in it many spacious caravanferas, fumptuous bazars, and innumerable

rable mosques, some remarkable for the elegance and others for the grandeur of their ftructure: he likewise invited foreigners from all nations to come and fettle there, built them factories, permitted them the free use of their feveral religions, and indulged them in many immunities. In particular, knowing the great confequence of the Portugueze at that period in the commercial world, he endeavoured to establish a connection with that enterprizing nation, folicited the court of Portugal that missioners might be fent to instruct his subjects in the principles of Christianity, and permitted the Jesuits to erect a church and found a college in his new city, which he endowed with a penfion from the royal treasury. By these liberal and politic exertions, Agra, or Akber-Abad, from being a country-town of no great note, foon became the most flourishing city in his dominions, and the thronged refort of Perfian, Arabian, and Chinese, merchants, besides those from the European fettlements, who flocked in multitudes to its mart.

Agra, during the long reign of Akber and his fon Jehaungeer, flourished as the first city for magnificence and commerce in India. Shah Jehaun, by rebuilding Delhi, and by removing removing the imperial infignia, the treasures and the jewels accumulated by his ancestors, to his new and splendid palace in that capital, gave the fatal blow to its consequence as an imperial city. Aurungzeb lived in the field of battle, and made it his business rather to extend the bounds, then to beautify and aggrandize the capitals, of his empire. Agra, deferted by its monarchs, languished under the deprivation of the royal finile, and rapidly funk into decay; at this day, however, it exhibits more magnificent monuments of former splendour than any city of Hindostan; and, when time shall have entirely levelled those monuments with the dust, AGRA shall furvive the wreck, and flourish for ever in the historic page of its immortal founder.

CHAP. III.

Of the Divisions of Hindostan according to the Hindoos themselves, according to the Persian and Arabian Geographers, and according to the most esteemed Accounts of the Europeans.

A FTER having traced the great outlines of the ancient geography of India, according to Ptolemy, Strabo, and Pliny; and having taken a view of the magnificence which diffinguished the successive capitals of that ancient empire, as well in remote as in more recent periods, it remains for us to pursue the tract originally marked out for the conduct of this introductory Differtation, and to consider India, or rather Hindostan, according to the divisions of the Orientals themselves and of the best modern geographers.

The most accurate accounts of the divisions and subdivisions of this extensive territory, the history of its most early periods and governing princes, are only to be collected

from

from the writings of the Indians themselves, and of those learned foreigners who have fuccessively resided among them. Although the facred language, which is the general deposit of their history and theology, has, till very lately, remained an infcrutable myftery, much credit is still due to the Mohammedan literati, for their efforts in various ages to investigate that obscure subject. Mr. Fraser's catalogue of Oriental manuscripts, added to his history of Nadir Shah, affords fome striking instances of that laudable curiofity; and it is highly to the honour of their Perfian and Tartarian conquerors, that fuch a general spirit of inquiry was encouraged among them by confiderable rewards, and that most of the historical and geographical tracts alluded to were written either at the command or by the pen of their monarchs. Many convincing proofs of this affertion might be adduced, but in particular the TARIKH E PADSHAHAN HIND, or History of the Sovereigns of Hind; the VAKEAT BABERI, or Commentaries of Sultan Baber; and the VAKEAT JEHANGEERY; of which the two last were written by those emperors themfelves. But their most illustrious exertions, in this respect, is the AYEEN AKBERY, or Mirror

Mirror of Akber, so often adverted to in these pages, which was compiled at that monarch's express command, and contains an account of the feveral provinces and cities of Hindostan, its civil and religious establishments, and the laws and religious rites of the Brahmins. The principal person employed in carrying on this great and useful work was Abul Fazil, prime vizier of the Mogul, the most elegant historian of his age, whose writings were fo much admired throughout the East, and so remarkable for energy and animation, that it was faid of them, that the monarchs of Afia were more afraid of the pen of the fecretary than of the fword of the fultan, formidable as that fword was. The Ayeen Akbery is, therefore, the rich mine whence most of our future information must be derived. But, before I enter on the modern part of the Indian geography, it is necessary that the word HINDOSTAN itself should be explained. Hindostan then is a corruption of the term Hindustan; the domestic appellation of India, compounded of Hindu, and stan, or istan, a region. Thus Persia is called in the Oriental language Fars-istan; Susiana, Chuz-iftan; and part of Tartary, Mogulstan. Mr. Dow has upon this word started a fingular

fingular and, as it turns out, an unfounded affertion. Indoo, or Hindoo, he fays, in Sanfcreet, fignifies the moon, and that from this luminary and the fun the Indian rajahs are fond of deducing their descent: he therefore contends, in opposition both to ancient and modern geographers, that the great river Indus takes its name from the people, and not the people from the river. Mr. Halhed, however, on the contrary, afferts that Hindostan is a word entirely of Persian origin, equally unknown to the ancient and modern Sanfereet; that the terms universally used for Hindoftan, in the Sanfcreet language, are BHERTEKHUND, a word derived from BHER-RUT, one of the first Indian rajahs, whose name was adopted for that of the kingdom, and KHUND, a continent, or wide tract of land, and JUMBOODE'SP, compounded of JUM-Boo, a jackal, an animal remarkably abounding in this country, and DEEP, any large portion of land furrounded by water; and that it is only fince the zera of the Tartar government that they have affumed the name of Hindoo,* to distinguish them from their

con-

[.] See Mr. Halhed's Preface to the Code of Gentoo Laws, p. 22, quarto; and Dow, vol, i. p. 32.

conquerors, the Muffulmen.* The word Gentoo, he adds, is an appellation equally unknown and inapplicable to the natives, either as a tribe of Brahma, or collectively as a nation, being derived from Gent, or Gentoo, which fignifies animal in general; and, in its more confined fense, mankind. Possibly the Portugueze, on their first arrival in India, hearing the word frequently in their mouths, as applied to mankind in general, might adopt it for the domestic appellation of the Indians themselves: perhaps also their bigotry might force from the word Gentoo a fanciful allufion to Gentile, or Pagant Mr. Halhed, on the fubject of the Sanscreet language, never stands in need of collateral evidence to support his affertions; otherwife Sir W. Jones's additional authority + might here be cited. who fays the natives call Hindostan Bharata. from "Bharat, one of two brothers, whose father had the dominion of the whole earth," and suppose this domain of Bahart to be in the centre of the Jumboodeep, or Jambu-DWEEPA, as he writes it; deriving the word from Jambu, a delicate kind of Indian fruit, called

Mr. Wilkins likewise affirms, that the terms Hindoo and Hindos are not to be found in the Sanscreet Dictionary.

[†] Afiatic Researches, vol. i. p. 419.

called by the Europeans rose-apple. Hence arises the vain appellation of Medhyama, or central, by which they likewise distinguish their

happy country.

HINDOSTAN, -formerly the empire of the Great Mogul; for, it would be infulting departed majesty to retain that mode of expreffion at this day, when it is a fact notorious to all Asia, that the city of Delhi, and a small territory round it, constitute in India the whole of the present dominions of the house of Timur: - HINDOSTAN is bounded on the north by the mountains of Tartary and Tibet: on the west it is separated from Persia and the Uzbek Tartary by deferts, and by those mountains which were known to the ancients under the name of Paropamisus; on the fouth, it is confined by the countries of Deccan, the Peninfula not being properly a part of it; and, on the east, it has for its limits the kingdoms of Tipra, Aslam, and Arracan, fituated on the Peninfula beyond the Ganges.

It will be observed, in drawing these lines of limitation, that neither the Ganges nor Indus are mentioned, as, in the ancient geography, the former as the eastern, nor the latter as the western, termination of this country; for, such a mode of division would

Vol. I. P deprive

deprive Hindostan of many extensive and valuable tracts that lie on the western banks of the Indus and along the eaftern borders of the Ganges. Ptolemy, who makes Arachofia, Gedrofia, together with the Paropamisadæ, and not the Indus, the western boundary of India, if he had been apprifed of the course of the Burrampooter, would doubtless have fixed upon that stream, and not upon the Ganges, for its eaftern limit. In our own ignorance of the geography of India, till of very late years we may find many apologies for the defective accounts of the ancient writers on that subject; and, instead of harshly censuring their venial errors, we ought rather to contemplate their laborious investigations in that infant state of the science with reverence and with admiration. Sir William Jones makes the large province of Sind to comprehend both Mocran, the ancient Gedrofia, and Multan, which, he obferves, have been confidered as provinces of Persia; while, on the other hand, we know that both Cabul and Zablestan, in the profperous state of the Indian empire, were generally confidered as forming a part of that empire, and were often governed by the viceroys of the Mogul. In fact, the title to possession

possession of those frontler provinces fluctuated with the viciflitudes of both empires; a circumstance which will account for the variations of modern geographers: and, with respect to the apparent inaccuracies of the ancients, the following pertinent remark of the last-mentioned author will serve at once as a vindication and as an elucidation of their writings: " It is usual with the Afiatics to give the same name to the countries which lie on both fides of any confiderable river: thus, the province of Sind is divided by the Indus. Charazm by the Oxus, Palestine by the Jordan, Egypt by the Nile, and the Eastern region of India by the Ganges." The Peninfula of India, understood in its greatest extent, is that tract of country fituated to the fouth of a line drawn nearly from Baroach. on the western, to Balasore, on the eastern, shore, and is sometimes denominated the Deccan, although in its proper and limited fense that title can only be given to certain distinct provinces of the Peninsula, It is bounded on the north by that imaginary line, and on the three other fides it is embraced by the ocean.

In the account given above of the modern divisions of Hindostan, I have taken Mr.

Orme and Mr. Rennel for my principal guides; the former, an historian of equal elegance and authenticity, the latter, without a rival, fince the death of D'Anville, in the path of Indian geography. Sir William Jones and the Ayeen Akbery will be our most certain conductors through the remainder of this treatife, which, if it should appear extended to too great a length, I hope that the candour of the reader will be exerted in my favour, when he reflects that I am attempting to convey ideas of the geography of an empire of which feveral provinces are or have been fo many potent kingdoms; an empire which the ancients confidered as the third part of the habitable earth, and which, in fact, conflitutes no inconfiderable portion of the vaft continent of Afia. To the barren subject of its geography, however, I have not wholly confined my observations, and much less to minute and uninteresting particulars: but have endeavoured to display its most prominent features, and to exhibit a general profpect of the extent and splendour of its ancient and celebrated capitals. For Oriental words are not eafily accommodated to an European ear; and many readers are apt to be displeased with the frequent return of harsh

and uncouth names of rivers, cities, and provinces, the very found of which creates difgust. To this consideration I shall ever pay a proper attention, but trust I shall never facrifice correctness to a fear of difgusting, nor perspi-

cuity to a vain polish of language.

In a future chapter, concerning the literature of the Hindoos, their strange eccentric conceptions relative to the geography of the globe, as well as of their own country, will come under our more particular review. It will, therefore, be sufficient in this place to remark, that the natives themselves suppose Jumboodeep to be one of the feven DEEPS, or itlands, furrounded by as many oceans, that compose the terrestrial globe. Jumboodeep has nine grand divisions, which are enumerated in the Ayeen Akbery, * and illustrated in a curious geographical map. In the centre of this deep, they fay, stands a golden mountain of a cylindrical form, which descends as far beneath as it rifes above the furface of the earth. The fummit of this mountain, whose altitude is 84,000 yojans, but, according to others, only 16,000 yojans, they denominate Sommeir; and on that fummit, and on its fides, they be-P 2 lieve

Aycen Akbery, vol. iii. p. 23, and Code of Gentoo Laws,
 p. 45, quarto edit.

lieve are the different degrees of paradife. In a direct line from the lofty golden mountain of Sommeir, at the extremity of the four quarters of the earth, their romantic imaginations have placed four cities, encompassed with walls built of bricks of gold, viz. Jumkote, Lanka, Siddahpore, and Roomuck. Our prefent bufiness is with that division only which extends from Lanka,* in the fouth, to the northern range of mountains passing between it and Sommeir, which in the language of the country are called Heemachel, Heemakote, and Nekh, and of which, in Mr. Burrow's opinion, the first are the RHYMMICIS mountains of Ptolemy; the fecond the IMAUS and the Emont mountains; and the third is the DEENIS of Ptolemy. This tract is Mr. Halhed's Bhertekhund, or, as I shall hereafter, according to Sir W. Jones's and Mr. Rennel's orthography, take the liberty of writing the word BHARATA.

BHARATA, the first division of Jumboodeep, is said in the Asiatic Researches (page 419) to have for its northern boundary the mountains

^{* &}quot;Lanka is not the ifland of Ceyloan, as is generally supposed, but a place determined by the intersection of the equator and the meridian of Delhi; which answers to the southern extremity of the Maldivy islands." See Ayeen Akbery, vol. iii. p. 36, in the notes.

tains of Himalaya, that is, I prefume, of Heemachel before-mentioned, taken in an extended fense; but in either appellative the classic term of IMAUS may be plainly traced. The mountains of Vindhya, called also Vindian by the Greeks, and the Sindhu, or Indus, according to the Indian geographers, form its limits on the west. The great river Saravatya, or river of Ava. washes Bharata on the southeast; and on the fouth it is bounded by the ocean and by the great island of Sinhala, or lion-like men. Between Lanka and Heemachel the Hindoos place feven ranges of mountains, extending from east to west; but the reader will readily excuse the insertion of their names, as well as those of the subdivisions of Jumboodeep, which, being unaccompanied with descriptive accounts, could only exhibit a tedious catalogue of names that would afford little pleasure to his eye, little music to his ear, and less improvement to his understanding.

The Persian and Arabian geographers divide the great Indian empire into two parts, which they call HIND and SIND. "By the country of Hind, in its strictest sense, they mean the districts on both sides of the Ganges, and by Sind the country that lies on each side of the Sindab, especially where it discharges

P 4

itself into the ocean. Sind, including Mocran and Multan, is bounded on the fouth by the Indian Sea, which embraces it in the form of a bow: it has Hind on the east, and on the west Kerman, with part of Sejestan, which also bounds it on the north; but if, with fome geographers, we make it comprise even Zablestan and Cabul, its northern limits willextend as far as Cashmire, that delightful and extraordinary valley, celebrated over all Afia for the fingular beauty of its inhabitants, the ferenity of its air, and the abundance of its delicious fruits: if, again, we include Cashmire also in this division of India, it will reach as far northward as Tibet or Tobat, the country of the finest musk, which has China on the east, and Oriental Tartary on the west and north." * Texeira + fays, the natives inhabiting the banks of the Sind are called, from its water, AB-IND; and that the Perfians and Arabians denominate the tract which it washes in the lower part of its course the kingdom of Diul.

HIND, according to Sir W. Jones, is divided into three parts; Guzzurat, including most of the southern provinces, and among them

Short Description of Asia, p. 8.

N Texcira's Hist. of Persia, p. 90.

LONG HORE

them the city and territory of Sumnat, the despoiling of whose august and venerable pagoda, filled with treasures equally sacred and inestimable, by the desolating tyrant Mahmud, in the eleventh century, will hereafter excite in us the strongest emotions of indignation and horror. MALABAR, or the country of the Malais, which includes what the Arabians call Beladelfulful, or the land of pepper, and is terminated on the fouth by the Cape of Comron, famous for producing the best aloewood, a favourite perfume of the Afiatics: to the fouth-west of this promontory are the numerous islands, which we call Maldives, and the Arabians Rabihat, and a little to the fouth-east lies the famous Scrandib, or Seilán, which produces fo many precious perfumes, jewels, and spices. Texeira writes the name of this great island of Selandive,* that is, the island of Seilan, observing that Dive in the language of the country fignifies an island, as the Male-dive, or islands of Male; Ange-dive, the five islands; while the great commercial town of Diu is called, by way of eminence, Dive, or Div, THE ISLAND. The Sanfcreet name of Seilan, according to a curious note and remark which I observe added to page 36 of

of the 3d vol. of the Ayeen Akbery, is TAPO-BON, a word refembling Taprobane, and implying the wilderness of prayer. From what was before remarked, in the ancient geography concerning the Malli, and the mountainous country of Malleam, in this neighbourhood, we may, I think, without any great violence on Eastern language, trace to them the name of this diffrict. BAR, as an adjunct, Mr. Richardson observes, denotes A COUNTRY, and instances Tranquebar and Malabar: BAR also fignifies elevated: in either sense the word is applicable. I have explained the word Malabar, but had omitted before to mention the derivation of Coromandel, which Mr. Rennel derives from Soramandelum, corruptly called Coromandel. The Soræ were a nation inhabiting that coast, who are mentioned by Ptolemy; and their capital of Arcoti, though strangely thrust out of its proper place in his map, is the Arcot of the moderns.

The third division of Hind is called Ma-BER, or the passage, by the Arabians, and extends from the Gulph of Bengal on both sides of the Ganges, as far northward as the Straits of Kupele. The Straits of Kupele, through which the Ganges discharges the vo-

lume

[.] Mr. Richardion's Differtation, p. 12.

lume of its waters, form a part of the chain of the Sewalic mountains that rife immediately north of the level plain of Hindoltan; while far above them, confiderably more northward, foar the fnowy precipices of Caucafus, Caucafus, in the language of Oriental poetry, is the tremendous Kaf, or Caph, which Mr. Richardson * translates rock, or promontory, and which in the romances of the East is supposed to form a part of that fabulous mountain, which like a vast ring furrounds the earth; where the monster Simorg,+ a griffin of immeasurable magnitude, has for unknown ages fixed her abode, and where the shadowy beings of Perfian mythology, dives, dragons, and dæmons, of every denomination, perpetually wage their horrible conflicts.

I shall now proceed to give the substance of what we find in the Ayeen Akbery ‡ relative

to

[·] Mr. Richardson, p. 170,

the The man who is unacquainted with the fairies, dragons, and enchanters, fo frequently introduced in the Poems of Pirduft; who knows nothing of the griffin Simorg, the speaking horse of Roslam, the dark sea which surrounds the world, the mountain of Kas, or the battle of the twelve heroes, can no more pretend to read the finest writings of Persia, than he could understand the Odes of Pindar, if he had never heard of the Trojan war, the groves of Elysum, the voyage of the Argonauts, or the several attributes of the heathen deities." Preface to Nadir Shah, by Sir William Jones.

I Ayeen Akbery, vol. ii. p. 3.

to the greater and smaller geographical divisions of Hindostan, as fixed by the emperor Akber, in the fortieth year of his reign, that is, about the year 1595 of the Christian æra; a book which, Mr. Rennel observes,* forms to this day an authentic register of these and all other matters relative to that empire.

Hindostan was then parcelled out into twelve grand divisions, called Soobahs, to each of which a viceroy was affigned, by the title of Soobahdar, corruptly written Soobah by European writers; for, Soobah fignifies province: many of these soobahs were in extent equal to large European kingdoms. The foobahs were again divided into circars, which Mr. Rennel would call counties; and these were fubdivided into purgunnahs, which he would call hundreds. The names of the twelve foobahs were, Allahabad, Agra, Owdh, Ajmere, Ahmed-Abad, Bahar, Bengal, Dehly, Cabul, Lahoor, Multan, and Malwa. When Akber conquered Berar, Khandeels, and Ahmednagur, they were formed into three foobahs, increasing the number to fifteen. It is remarked, in a note of the Memoir, that Akber might have probably changed the boundaries of the old foobahs, by adding or taking

king away certain circars, for the purpose of rendering each province more compact, and the provincial capital more centrical to the feveral parts of it. Guzzurat is not mentioned, as the reader must notice, in the above quotation; although Ahmed-Abad, its capital, is, which may probably be used for the province itself, although in another note to the fame publication we are told, that Guzzurat is by fome of the Hindoos confidered as lying without the limits of Hindostan; and we are referred for a proof of this remark to the letters of Berar Rajah. Abul Fazil expresses his hope, as he shall commence his description from the foobah of Bengal, the most fouthern extremity of Hindostan, and carry it to Zabulistan, that, while he is writing, not only Turan and Iran, but also other countries, may be added to the account.

BENGAL.

"Bengal (including Orissa) has the sea on the east, is bounded by mountains on the north and south, and on the west joins to the soobah of Bahar. It is situated in the second climate.* From Chittagong to Kurhee are four

^{*} The ancient geographers divided the globe into feven climates only.

four hundred cose difference of longitude; and from the northern range of mountains to the southern extremity of Sircar Maddura are comprehended two hundred cose, of latitude." We shall be sufficiently exact, Mr. Gladwin observes, if we take the Indian cose, which varies in the several provinces, at the general average of two English miles. When Orissa was added to Bengal, the additional length was computed to be forty-three cose, and the breadth twenty cose.

Without following the Ayeen Akbery through all the minuter divisions of each soo-bah, I shall notice what is there remarked concerning its principal city, climate, productions, force, commerce, and revenue. The history of their several sovereigns, when separate kingdoms, will be given hereafter.

"The air of Bengal is comparatively temperate. The periodical rains commence in April, and continue for somewhat more than fix months during this season; the low-lands are sometimes entirely overflowed." We are informed in a note, that the frequent storms of thunder, lightning, wind, and rain, from the north-west, which precede the setting in of the periodical rains, contribute very much to moderate the heat; that those rains more

generally

generally commence in the beginning of June; and that, if they break up early in September, the weather is intenfely hot, and the inhabi-

tants are very fickly.

This foobah abounds with rivers, the finest of which is the Gung, or Ganges, whose fource has never been traced. The Hindoo priests say that it flows from the hair of Mahadeo." The real fource and progress to the ocean, both of the Ganges and Burrampooter, as discovered by the moderns, will hereafter merit our more particular confideration. "The learned among the Hindoos have composed volumes in praise of the Ganges, all parts of which are faid to be holy; but some particular places are effected more to than others. The great people have the water of this river brought to them from vast distances, it being esteemed necessary in the performance of certain religious ceremonies. The water of the Ganges has been celebrated in all ages, not only for its fanctity, but also on account of its sweetness, lightness, and falubrity, and because it does not become putrid, though kept for years. There is another very large river called Burrampooter, which runs from Khatai to Coach, and from thence through Bazoolah to the fea. The Sea of Bengal, which is a bay of the ocean, goes on one fide to Basorah, on the other to Kulzum of Egypt, and from thence to Persia, where by the natives it is called the Sea of Omman and the Sea of Persia."

" Most of the rivers of Bengal have their banks cultivated with rice, of which there is a variety of species. The foil is so fertile in fome places, that a fingle grain of rice will yield a measure of two or three seer. * Some lands will produce three crops in a year. Vegetation is here fo extremely quick, that, as fast as the water rises, the plants of rice grow above it, so that the ear is never immersed. Men of experience affirm, that a fingle stalk will grow fix cubits in one night. The fubjects pay their annual rents in eight months, by instalments, themselves bringing mohurs and rupees to the places appointed for the receipt of the revenues, it not being cuftomary in this foobah for the husbandmen and the government to divide the crops. The food of the inhabitants is for the most part fish and rice. Their houses are chiefly made of bamboos, fome of them very expensive and very durable. They travel chiefly by water, especially in the rainy season; and they construct boats for war, burthen, and travel-

ling.

The feer is a measure equal to two pounds avoirdupois.

ling. For their journeys by land they make use of a machine called a Sookhasens, supported upon the shoulders of men by a pole, formed of a number of straight pieces of wood, joined together by iron rings. The fides of the machines are ornamented with different metals, and over the top is thrown an arched covering, made of woollen cloth, for defence against the sun and rain. In these machines you fit, or lie down and fleep, as conveniently as in a room or house. Some also ride upon elephants. Horses are very scarce. In some parts of this soobah are manufactured hempen carpets, so beautiful that they feem to be made of filk. The inhabitants of Bengal are exceedingly fond of falt, which is scarce in some parts of the foobah. Diamonds, emeralds, pearls, agates, and cornelians, are brought from other countries to the fea-ports of Bengal. Their flowers and fruits are fine and in plenty. The beetleaut stains the lips of those who eat it quite red."

Among the principal cities of Bengal are particularly noted Jennut-Abad, a very ancient city, formerly called Lucknowti, and fometimes Gowr. It has a fine fort, to the eastward of which is a large lake. If the Vor. I.

dams break during the heavy periodical rains, the city is laid under water. - Mahmoodabad. whose fort is surrounded by a marsh. When Shire Khan conquered this country, fome of the rajah's elephants fled into the wilds, where they have increased in great numbers. This circar produces long pepper. - Chittagong, a large city, fituated among trees, upon the banks of the fea, and a great emporium, being the refort of Christian and other merchants. There are two other emporiums a mile distant from each other, one called Satgong and the other Hougly, with its dependencies; both of which are in the possession of the Europeans. Satgong is famous for pomegranates. The foobali of Bengal now includes the five circars of ORISSA. which was once an independent country.

ORISSA.

"ORISSA contains one hundred and twenty-nine brick forts. The periodical rains continue here eight months. They have three months of winter, and only one month that is very hot. Rice is cultivated in great abundance. The inhabitants live upon rice, fash, and vegetables. After boiling the rice, they

they steep it in cold water, and eat it the fecond day. The men are very effeminate, being exceedingly fond of ornaments, and anointing their bodies with fandal-wood oil. The women cover only the lower parts of the body, and many make themselves dresses of the leaves of trees. Contrary to the general practice of the Hindoo women, they may marry two or three times. Here are many idolatrous temples, built of stone, and of a vast height. Paper and ink are seldom used in this province; for the most part they write with an iron style upon the leaf of the taartree, and they hold the pen with the fift clenched. Here are manufactures of cloth. The fruits and flowers of Orifla are very fine and in great plenty. The nufreen is a flower delicately formed, and of an exquisite fmell; the outer fide of the leaf is white, and the inner of a yellow colour. The keurah grows here quite common; and they have great variety of the beetle-leaf. They reckon . all their accounts in cowris,* which is a fmall white shell, with an aperture in the middle, and they are found on the fea-shore."

Q 2 Cuttek,

Eighty cowris are called a pun, and from fifty to fixty puns amount in value to a rupee. The great cheapness of provision makes it convenient to have fo-very low a medium for dealings among the poor.

Cuttek, or Cartack, is mentioned in the Ayeen Akbery as the capital of Oriffa, containing a fort, with many magnificent buildings, which, when Akber reigned, was the refidence of the governors of the province. That book describes the surrounding country as lying very low, and in the rainy season as entirely covered with water. The description of the samous palace of Cattack merits attention, as it marks the different apartments, both for state and convenience, into which the mansion of an Indian rajah of that period was divided.

"The palace of Cattack confifts of nine distinct buildings. The first is for the elephants, camels, and horses. The second is for the artillery and military stores; where are also quarters for the guards and other attendants. The third is occupied by the porters and watchmen. The fourth is appropriated for the several artificers. The kitchens make the fifth range. The fixth contains the rajah's public apartments. The seventh is for the transaction of private business. The eighth is where the women reside. And the ninth consists of the rajah's sleeping apartments. To the south of this palace is a very ancient Hindoo temple."

In the town of Purforem, on the banks of the fea, the temple of Jaggernaut is particularized, concerning the origin of whose erection and worship in Hindostan the following circumstances are related. At the defire of an ancient rajah of the province, a learned Brahmin was fent to fix upon the fpot most proper for the foundation of a city. Arriving at this spot, and inclining to fix upon this fituation as by far the most eligible of any he had yet feen, but still not entirely determined, he observed a crow plunge into the water, and, after washing its body, pay its obeifance to the ocean. The Brahmin, who is affirmed to have understood the language of birds, inquired of the crow the meaning of this strange procedure: the bird answered, That he had formerly been of the tribe of Dewtah, but from the curse of a religious man was transformed into that shape; that the spot whereon he stood was highly favoured by the Creator of the univerle; and that whoever worlhipped him on that fpot should not fail to prosper. Animated by this intelligence, as well as by fucceeding revelations of the divine will, the rajah built a large city and a place of worship on the fpot where the crow had appeared.

Not

Not long after, the same rajah was directed by a vision to cast his eyes, upon a certain day, on the fea-shore, when there would arise out of the water a piece of wood fiftytwo inches long, and one cubit and a half broad; that this was the true form of the Deity; that he must keep the invaluable treasure seven days in his house, and afterwards fet it up in the temple as an object of adoration. The vision was verified by the appearance, at the appointed time, of the wooden divinity, which the rajah called Jaggernaut, and, afterwards ornamenting it with gold and precious stones, deposited it in the temple, where it became the object of worship of all ranks of people; and is reported to have performed many miracles. The Brahmins wash the images of Jaggernaut fix times every day; and the quantity of victuals daily dreffed for these idols is so very great as to feed twenty thousand persons. They also at certain times carry the image in procession upon a carriage of fixteen wheels, which, in the Hindoo language, is called Ruhth; and they believe that whoever affifts in drawing it along obtains remission of all his fins.

As the pagoda of Jaggernaut is the most celebrated and frequented in India, I thought

the foregoing account of its origin, from fo authentic a register of provincial antiquities as the Ayeen Akbery, would not be unwelcome to the reader. He will find, in Mr. Hamilton's * account of this coaft, an engraving of this temple, which is an immense circular structure, about fifty yards high, with the image of an ex, larger than the life, cut out of one entire stone, and projecting from the centre of the building. The fore part of the animal is alone visible; the hinder parts are fixed in the wall. He has likewife an engraving of the coach, four stories in height, in which the idol is carried about in procession, and under whose wheels he reports that the infatuated devotees often throw themselves in a transport of holy fury. He describes the idol as an irregular pyramidal black stone, and the temple itself as destirute of any light except what it receives from one hundred lamps constantly burning before him. Tavernier, who was at this place about thirty years before Hamilton, informs us that this idol was adorned with a mantle of gold tiffue, had two large diamonds in the place of eyes, 0 4

See Hamilton's Account of the East Indies, vol. i. p. 385, London edit. 1744. I have been told that Mr. H.'s homely familitude of Jaggernaut's temple to a vast butt, fet on end, is not unfaitable. and another pendant from his neck, with bracelets of pearls and rubies for his arms; and that the great revenues of Jaggernaut arofe from the liberal donations which were daily poured into its treasury by innumerable pilgrims of every description.

The foobah of Bengal is said to consist of twenty-four circars, and seven hundred and eighty-seven mahls. The revenue is sifty-nine crore, eighty-four lacks, sifty-nine thousand three hundred and nineteen daums; and Fraser * allows three hundred and twenty daums to a pound sterling. The forces maintained by the zemeendars amount to 23,350 cavalry, 801,158 infantry, 170 elephants, 4,260 cannon, and 4,400 boats.

BAHAR.

"Bahar is fituated in the fecond climate. The length from Gurhee to Rhotas is 120 cose, and the breadth from Tirhoot to the northern mountains includes 110 cose. It is bounded on the east by Bengal, by Allahabad and Oud on the west, and on the north and south by large mountains."

"The principal rivers of this foobah are the Ganges and the Sown. The Sown, the

Ner-

Nerbuddah, and the Chelum, all three spring from one fource, near Kurrah. The water of the Sown is cool, pleafant to the taste, and wholesome; having run to the south as far as Muneyr, it then unites with the Ganges. The river Gunduck comes from the north, and empties itself into the Ganges near Hajeepoor. The fummer months here are very hot; but the winter is very temperate. The rains continue fix months. The country is continually covered with verdure, and the foil is fo hard, that, during the stormy winds which blow here, you are not much incommoded with the dust. Agriculture is in the highest perfection, the rice being so excellent, and of fuch a variety of species, as are no where to be equalled. Sugar-cane is cultivated in great abundance and in high perfection. Mughee is that species of the beetleleaf which is most esteemed; it is of a very thin and delicate texture, of a fragrant fmell, with a beautiful colour, and the flavour is delicious. It is not customary in Bahar to divide the crops. The husbandman brings the rents himself, and, when he makes his first payment, an ancient custom obliges him to come dreffed in his best attire,"

Most

Most of the houses in this province are described as roosed with tiles, and the inhabitants are reported to be famous for building boats and for the manufacture of gilded glass: they have good elephants in plenty; but horses and camels are scarce. Bahar is famous for parrots, goats, sighting cocks, "remarkable for affording great sport," and great variety of hawks.

In firear Mungheer a stone wall is mentioned as extending from the Ganges to the mountains, and forming the boundary between Bengal and Bahar. In firear Bahap is Gaya, famous as a place of Hindoo worthip, and called, from Brahma, Birm-Gaya. Tirhoot, which Sir W. Jones mentions, on the authority of some information received in India, as the supposed residence of a colony of priefts from Egypt, is afferted to have been from old time the refidence of Hindoo learning; and this affertion renders that circumstance highly probable. The water and air of Tirhoot are much celebrated; and it had delightful groves of orange-trees, extending thirty cofe, not ill calculated to promote the purpoles of science and encourage meditation. The last remarkable place mentioned in Bahar is the strong fortress of Rhotas, fituated

fituated upon a lofty mountain of most difficult access, and fourteen cose in circumference. The inclosed land is cultivated; and within this space are many springs: water may be procured in any part, by digging three or four ells below the furface of the earth. There are several lakes within the forts. During the rains there are not less than ten delightful cataracts.

The foobah of Bahar contains feven circars, fubdivided into 199 pergunnahs. The gross amount of its revenue is stated at 54,47,985,13 ficca-rupees: it furnishes 11,415 cavalry,

449.350 infantry.

The whole foobah of Bengal, the greatest part of Bahar, and the diffricts of Midnapore in Orifla, are in the possession of the British nation, or rather of their representative in that quarter, the British East-India Company. Those parts of Bahar and Orissa which are not in the possession of the English, constituting, in regard to Bahar, a very fmall, but, in regard to Oriffa, a very confiderable, proportion of those respective soobahs, are in the hands of the Mahrattas.

ALLAHABAD.

This foobah is represented as situated in the fecond climate. In length it is 160 cose, in breadth 122 cofe. To the east it has Bahar; to the north Oud; Bundhoo lies on the fouth, and Agra on the west. Its principal rivers are the Ganges and the Jown, or Jumna. It produces variety of fruits, flowers, and excellent plants; has abundance of melons and grapes, and is well stocked with game. Agriculture is in great perfection; and the inhabitants fabricate fome beautiful species of cloths, and have a manufacture of woollen carpets. Allahabad, the former name of which was Piyaug, is the capital city of this foobah. Akber gave it the former name, and built a stone fort, in which are many magnificent edifices. Benares is specified by the name of Baranassey, as a large city situated between two rivers, the Birnah and the Affey, whence probably its former appellation is derived; but its most ancient name was Kaffy. It is built in the form of a bow, of which the river Ganges refembles the bowftring. Its temple was formerly as celebrated in Hindostan and as much resorted to as Mecca is by the Mohammedans. It is the ancient

ancient feat of Hindoo learning as well as religion. Jown-poor is the next city in magnitude, and Chunar is described as a stone fort of incomparable strength, fituated upon a lofty hill, at whole foot flows the Ganges: Callinger is a fortress still stronger and more celebrated. Within the compass of its walls are many springs and lakes, and many temples devoted to idolatry. Ebony and a variety of wild fruits are found here; in its neighbourhood there is a diamond mine; and twenty cole from the fort fmall diamonds are fometimes found. Jeipal's burning himself, and the cause of it, have been already mentioned: another instance of a rajah's devoting himself to the same mode of destruction occurs in the account of Callinger, with this difference, that the former put an end to his existence, because his reputation was lost, the latter from the fear of loling it. The greatest part of Allahabad is in possession of the nabob vizier: the remainder is under the controul of the English. Allahabad contains ten firears, divided into 177 purgunnahs. | Its revenue is stated at 53,10,695-7-9 siccarupees. It furnishes 11,375 cavalry, 2,37,870 infantry, and 323 elephants.

O U D.

Oud has Bahar on the east; on the north it is bounded by mountains; by Manickpoor on the fouth, and on the west by Kinoge. Its length is flated at 135 cose, and its breadth at 115 cofe. The Gogra, the Gounty, and the Sy, are its largest rivers. The water and air are good, and the feafons are temperate. Agriculture in this foobah is in high perfection. Some particular kinds of rice growing here are represented as " incomparable for whiteness, delicacy, odour, and digestiveness." The crops are fown three months earlier than in any other part of Hindostan, and the stalks are faid to rife as fast as the inundating water. " Here are great variety of fruits and flowers. Of game there are many kinds, and plenty of wild buffaloes. When the plains are overflowed, the wild animals refort to the high lands, and the hunting of them affords great diversion. Some animals remain all day in the water, just keeping their noses above the furface to breathe, and come on-shore only at night."

The incredible magnitude of the city of Oud in ancient times has been mentioned before. before. It is esteemed one of the most facred places of antiquity. At the distance of a cole from the city, the Gogra and Sy unite their streams, and the confluent river runs at the foot of the fort. From the northern mountains are imported a number of curious articles of commerce: among these are specified mulk, cow-tails, chook (an acid mixture of lime and lemon juice boiled to a confistence), tincar, civet, zedoary, redwood, asafœtida, and amber. In return, the traders in these articles carry back earthen ware. Lucknow is a large city, pleafantly fituated upon the banks of the Gounty, and the fuburbs are also very delightful. In Abul Fazil's account of this foobalt are recorded many instances of the abfurd superstitious credulity both of the Mohammedans and the Hindoos. According to the former, it contains the hallowed tombs of Seth and Job, of which wonderful stories are related. According to the latter, it has a refervoir of water, bubbling up with fuch violence, that a man cannot force his way down into it; fands: that fometimes assume the form of Mahadeo: and fields that, during a particular festivity, vomit forth flames. Biratch is a large city, delightfully fituated amongst a number of gardens

gardens upon the banks of the river Sy. The town of Belgram is celebrated for producing men "with lively imaginations and melodious voices;" and for a well, whose efficacious water improves the understanding, while it amends the fight.

The rich, extensive, and flourishing, soobah of Oud, and the greatest part of Allahabad, are at this day in the possession of Azuph Dowlah, son of the late Sujah Dowlah, vizier of the empire, and a tributary ally of the British power in India.

Oud has five circars, divided into 138 pergunnahs. Its total amount of revenue is flated at 50,43,454—4 ficca-rupees; its force at 7660 cavalry, 1,68,250 infantry, and 59 elephants.

AGRA.

"Agra is fituated in the fecond climate. This foobah is bounded on the east by Ghatempoor; on the north by the river Ganges; on the fouth lies Chundery; and Pulwuh confines it on the west." Its greatest length is 175 cose; its extreme breadth is from Canouge to Chundery; but the number of cose forming that breadth is not specified. The principal rivers are the Jumna, rising in the northern mountains,

mountains, and the Chumbul, deriving its fource from Hasselpoor in Malwa. The union of the two rivers takes place at Culpee.

" A great many fituations in the fouthern mountainous parts of this soobah are remarkably pleafant and healthy. Agriculture is here in perfection. They have abundance of flowers and sweet-scented oils, very excellent beetle-leaf, and grapes and melons, as fine as those produced in Iran and Turan," What is related concerning the capital of Agra has been noticed before. The fecond place of confequence mentioned is Futtehpore, containing a strong fort, with many magnificent buildings, a palace, a mosque, and a monaftery, erected by Akber. Over one of its gates are placed two aftonishing elephants, carved in stone. Futtehpore is celebrated for a quarry of red flone, from which the materials for erecting its own stupendous, but now ruined, structures, as well as the splendid palace of Agra, were obtained. The third city is Byaneh, once the capital of this foobah, famous for indigo of the most valuable species, for white sugar, for mangoes excellent in flavour, and of uncommon magnitude, " fome weighing above two pounds;" and for various other rarities. The fort is large, VOL. I.

large, and contains many edifices and fubterraneous caverns, where there are now found warlike weapons and kitchen utenfils. It is remarkable for a very high tower. Concerning the city of Muttra, upon the banks of the Jumna, nothing is specified, but that it has many idolatrous temples, the refort of pious Hindoos. Of that hallowed city, however, which was the birth-place of Crishna, fome farther account will be given hereafter. Of Kinoje too much probably has been already faid. Gwalior, that celebrated fortress which for fo many ages was the prison of the royal family, is the last place of importance noticed, but is not particularly described. It is, however, faid to be celebrated for the goodness of its air and water, its fine fingers, and beautiful women. In Agra are manufactures of blankets and fine stuffs; and in Allore those of woollen carpets and glass. In this foobah there are mines of filver, torquoife-stones, and copper: it contains thirteen circars, fubdivided into two hundred and three pergunnalis. The amount of revenue is 64 cole, 62 lacks, 50,304 daums, or ficca-rupees 1, 51,56,257-9; and the number of the forces it furnishes are 50,600 cavalry, 5,77,570 infantry, and 221 elephants.

[259]

The foobah and city of Agra, during the period of the decline and fince the extinction of the Mogul empire, have witneffed a rapid succession of masters. The Jauts were the first usurpers, and, in 1770, were in possession of the city and a great part of the foobah bordering upon the Jumna. From their conquests in Agra, that once powerful race were, about eighteen years ago, driven by the superior forces of Nudjuff Khan. Nudjuff was in his turn expelled by the present possessor, Madajee Sindia, at this time one of the most formidable among the felf-created fovereigns of Hindoftan. .

MALWA.

Malwa, which, like the preceding foobahs, is fituated in the fecond climate, is in length 245 cose, and in breadth 230 cose. " It is bounded on the east by Bandhnoo; on the north by Nerwer, and mountains; on the fouth by Boklaneh, and on the west by Guzzurat and Ajmeer. The rivers Nerbuddah, Soopera, Calyfind, Neem, and Lowdy, flow through this foobah. You cannot travel two or three cose without meeting with streams of good water, whose banks are shaded by the wild willow and other trees; and decorated with

R 2

with the hyacinth, and other beautiful and odoriferous flowers."

"There are abundance of lakes and verdant plains, ornamented with innumerable magnificent and elegant buildings. The climate is so temperate, that in winter there is no occasion for warm clothing; nor is it neceffary in fummer to cool the water with faltpetre. But in the four rainy months the night air is cold enough to render a quilt neceffary. The fituation of this foobah, compared with the other parts of Hindostan,* is fomewhat high, and all the land is arable. Both harvests are very good, Wheat, poppies, fugar-cane, mangoes, musk-melons, and grapes, are here in high perfection. In Hafselpoor the vine bears fruit twice a year. The beetle-leaf is very fine. The natives of Malwa give their children opium to eat till they are three years old; the peafants and even the market-people are never without arms."

The principal places of importance enumerated in Malwa are Owjain, a large city, held in high veneration by the Hindoos, and fituated upon the banks of the Soopera, a river which Abul Fazil, with great gravity, observes fometimes

Mr. Rennel fays, it is unequivocally the highest region in Hindostan.

fometimes flows with milk; Gurreh, a district abounding with forests and wild elephants, so fertile that it supplies both Guzzurat and the Deccan with grain; Chundery, a very large and ancient city, in which is a stone fort; and indeed this city must have been one of the largest in India, for it is faid to have contained " fourteen thousand stone houses, three hundred and eighty-four markets, three hundred and fixty caravanferas, and twelve thousand mosques;" and Mundoo, once the capital of the foobah, whose fortress it twelve cose in circuit, and displays in the centre of it a minaret, eight stories in height. This deserted capital is faid to abound in monuments of ancient magnificence, and to be bonoured with the tombs of Kuljyan fultans. In its neighbourhood a species of tamarind grows, as big as the cocoa-nut. I omit the long account of the PARIS stone, said to have been discovered in this foobah, which had the enviable property of converting whatever metal it touched into gold, as of kindred veracity with that of the rivers, whose current was milk.

Malwa at this time is divided among the Paishwah, the nominal head of the western empire of Mahrattas, Madajee Sindia beforementioned, and Holker, a Mahratta chief,

R 3

whole

whose capital is Indore, situated about thirty miles on the west of Ougein.

Malwa contains twelve fircars, subdivided into 301 pergunnahs. Its revenue is stated at twenty-four crore, six lacks, ninety-five thou-fand and sifty-two daums, or sicca-rupees 6,17,376—4—15; its forces at 280,816 ca-valry, 68,000 infantry, and 90 elephants.

KHANDEES.

This foobah, which was by Akber denominated Dandees, in memory of his fon, Sultan Daniel, who died at its capital of Berhampore, is also situated in the second climate. It is in length feventy-five cofe, and in breadth fifty cose; being bounded on the north and west by Malwa, on the fouth by Kalneh, on the east by Berar, and on the north by a range of lofty mountains. " It abounds with rivers and rivulets. Of these the principal is the Talce, frequently called the Poomy. The air of this foobah is delightful; and the winter is very temperate. Jewary is the grain principally cultivated in this foobalt; and in feveral places they have three crops of it in the year. Their esculent plants are remarkably fine; the rice is excellent; and they have great plenty

of flowers and fruits, together with beetleleaf in abundance."

Among the principal cities, towns, and forts, enumerated, are Asser, a castle where the governor of the province relides, lituated upon a lofty mountain, incomparably firong, and encompassed with three other forts, at whose top is a very large city: - Berhampore, the capital of Khandees, lying upon the river Tapty, and three cose from Affeer, surrounded with beautiful gardens, abounding with fandalwood, and inhabited by people of all nations, but particularly by handicraftsmen: - Adelabad, a good town, which the Hindoos hold in great veneration: - Changdavy, a village near which the rivers Tapty and Poorna unite their streams, forming a confluence, held facred by the Hindoos, and by them called Jiggerteerut or the liver of boly places: - Damerny, a populous town, near which is a refervoir of boiling water, worshipped by the Hindoos: - Chowpurreh, a large town, well inhabited: - and Thalny, a fort, which, though fituated upon a plain, is nevertheless a place of great strength.

In this foobah are thirty-two pergunnahs, all in high cultivation. The hufbandmen are honourably fpoken of as dutiful fubj. ets, as very laborious, and some of them as remarkable

R 4

able for their skill in taming lions. Khandees, or Candeish, is the smallest of the soobahs, and is at present divided among the Paishwa, Sindia, and Holkar. The fine city of Berhampore is in possession of Sindia. The amount of the revenue is 12,64,762 Berary tungahs; and the tungah is reckoned at twenty-four daums.

BERAR.

The soobah of Berar is in length 200 cose, and in breadth 180 cose. It is also fituated in the second climate. On the east it joins to Beeragurgh; on the north lies Settarah; on the south Hindiah; and on the west Telingana. "The air is very temperate; and the soil is highly cultivated." The principal river is the Godavery, which is a facred stream, dedicated to Kotum, as the Ganges is to Mahadeo, and is holden in great veneration by the natives. Its source is in the mountains of Sihya, near Turneek, and the current passing through the territory of Ahmednagur enters Berar, and thence rolls into Telingana. The Talce and the Tapty are also facred streams.

In this foobah are diamond-mines. The learned reader will recollect, that Ptolemy speaks of the diamonds found on the banks of the Sambulpoor river. In some parts are falt-petre works, which yield a considerable revenue to the state: they have likewise manufactures of flowered stuffs. "In Indore and Neermul are steel-mines. Those places are also famous for very neat stone vessels. Their oxen are very sine. The house-cocks which are bred there have black blood and bones."

Eletchpore is described as a large city, where the governor of the foobah refides; and Kullem as an ancient city, famous for buffaloes. Some very strong forts are enumerated, of which the principal is Ramgurh, faid by Abul Fazil not to be at that time conquered by Akber. Indeed, as only the western parts of Berar were ever conquered by that emperor, the account of this foobah is but very incomplete; nor, from their ignorance of the internal parts, has this defect been even yet supplied by modern writers. In the mountains of Berar liberty feems to have made a bold ftand against the incursions of the Mogul arms. The number, which is confiderable, and the strength, which is truly formidable, of the ancient rajahs and zemeendars of Berar, are particularized by the fecretary of Akber. One of them, by name Chatwa, is faid to have commanded 2000 cavalry, 50,000 infantry, and 100 elephants. As in Bahar there is a facred place place called Gaya, dedicated to Brahma; so in Berar is there a Gaya, sacred to Bishen; and our author tells us of a third of the same name, near Bijapoor, being a vast reservoir of water, remarkable for a very deep spring. At these three places, say the Brahmins, if charity be bestowed, it obtains pardon for the deceased.

Berar contains 13 fircars, subdivided into 42 pergunnahs, the revenues of which are collected by Nussuk, that is, by a valuation of the crops.

Not being a fettled government, the total amount of the forces it could raife is not specified, nor that of its revenue clearly stated. The principal part of this soobah belongs to a Mahratta chief, called Moodajee Boonslah, a direct descendant of Sevagee, the original sounder of that empire in Hindostan, whose capital is Nagpoor. The remainder of Berar is holden by the Nizam, who pays a chout, or fourth part of its clear revenue, to Moodajee.

GUZZURAT.

This foobah, fituated in the second climate, is in length 302 cose, and in breadth 260 cose. On the east lies Khandees; on the north Jalore and Ider; on the south are the ports of Dummun and Cambayet; and on the

west Jugget, which is situated on the seashore. The southern parts of Guzzurat abound with mountains. It is watered by the ocean, and by the following rivers; the Sabermutty, the Bateruck, the Mehindery, the Narbudda, the Tapty, and the Sirsooty. The air of this foobah is temperate; the foil fandy. That species of grain called jewary and bajero is faid to be principally cultivated in Guzzurat; wheat, barley, and rice, are imported from the neighbouring provinces. So great an abundance of mangoes, of which some are uncommonly large and delicious, of mulk-melons, figs, and most other fruits, plants, and flowers, natives of India, grow here, that the whole foobah has the appearance of a perfect garden. All forts of Indian manufactures flourish in Guzzurat; many of the most curious and costly kinds. Boxes inlaid with ivory and pearl, gold and filver stuffs, velvets, cotton cloths, excellent fwords, bows, and arrows, are fabricated here. There is a confiderable traffic in precious stones, and silver is imported from Room and Irak.

The capital of this rich, flourishing, and extensive, soobah is Ahmedabad.* The situa-

^{*} The reader is defired to notice, that aran always means city, and roar, place: thus, Ahmed-abad is the city of Ahmed; Fattehpore, the place of victory.

tion is described as remarkably healthy. It has two forts, and was once divided into 360 quarters, of which only 84 are in a prosperous condition. " In these are 1000 mosques, each having two large minarets, and many wonderful infcriptions." Twelve cole from this city is Mahmudabad, containing very many grand edifices, and furrounded with a wall feven cofe fquare. The ports of Cambay and Ghogeh are dependent upon firear Ahmedabad. Ghogeh (Goga) is a large port, well built, and inhabited by merchants of various kinds. The cargoes of the thips are put into fmall vessels, called Tahwery, which transport them to Cambay. Siddahpoor and Beernagurh are noticed as places of great religious refort, and inhabited principally by Brahmins; the latter containing 300 idolatrous temples. Chumpaneer is a fort fituated upon a lofty mountain, the road to which for upwards of two cofe is extremely difficult, and there are gates at feveral parts of the defile. At one place they have excavated near fixty ells in length, which space is covered with planks, that can be removed on the approach of an enemy. Sooret (Surat) is a great emporium. The river Tapti runs past it, and, at the distance of seven cose, joins the sea. The followers of Zerdusht,

dusht, when they fled from Persia, settled at Surat, where they practifed the doctrine inculcated by the Zend and its commentary the Pazend. From the liberality of his majesty's disposition, says Abul Fazil, every sect exercifes its particular mode of worship without interruption. Baroach is also a fine fort and a grand emporium: it is washed by the Nerbuddah in its passage to the ocean. Sircar Surat was formerly an independent territory; the chief was of the Ghelote tribe, and commanded 50,000 cavalry and 100,000 infantry. It is now formed into nine principal divitions, each inhabited by a different tribe.

Through the description of all those divifions it is not necessary for us to follow the Ayeen Akbery: but, in the first division, called New Surat, may be noticed the city and strong stone fort of Chunahgurh, situated in the heart of the Peninsula: and, in the second division, Putten Sumnaut, a large town upon the shore of the ocean, particularly challenges our attention, from its having been anciently a most celebrated place of Hindoo worship, and decorated with a pagoda the most superb and wealthy of any throughout Hindoltan. The fource of the Nerbuddah, which is holden in the most facred veneration by the Hindoos, is

near Sumnaut. Those, who delight in prodigies, will find their tafte for the marvellous gratified, by reading farther the account of this fecond division of Guzzurat. The third division, it is faid, contains the remains of a large city in ruins, whose name is not specified, but of which the fituation, at the foot of the mountains of Sironj, appears very defirable. The ancient city Mr. Rennel takes to have been Nehlwarah, mentioned by Ferishtah as the capital of this soobah, and by the Arabian travellers of the ninth century as the refidence of the supreme Balhara, or monarch of Cambay. " The fixth division has fuch large rivers, the mountains are fo lofty, and the country is in general fo woody, as to be impervious to an army. It is inhabited by the tribe of Chetore." The ninth division is remarkable for being the refidence of the Charun tribe, a race of people who feem to refemble the ancient bards; for we are told that " the greatest part of them employ themselves in finging hymns of celebration and in reciting genealogies, and that in battle they repeat warlike fables to animate the troops. They are also famous for discovering secret things: throughout Hindostan there is hardly a great man who hath not fome of this tribe in his fervice." After the enumeration of these divisions, is described the wild and dreary region of Cutch, lying to the west of Guzzurat, and extending in length 250 cofe, and in breadth 100 cofe. The greatest part of Cutch is composed of woods and uncultivated fands; but fine horses are bred in those woods, which are supposed to be of Arabian extraction. They have also remarkably good camels and goats. The men are tall and well-proportioned, and wear long beards. The capital city is Tahej, which has two strong forts, called Ihareh and Khundkote. The military force of this country is stated at 10,000 cavalry and 50,000 infantry. A confiderable tract of low fenny country, on the west of Ahmedabad, at certain feafons inundated by the fea, and, when dry, famous for the manufacture of great quantities of falt, is also particularly pointed out in the Ayeen Akbery: but our wonder is not a little excited, that a river of fuch magnitude as the Puddar, which paffes through, and contributes, by its rifing waters, to overflow that fpot, is not fo much as mentioned.

The foobah of Guzzurat contains nine firears, divided into 198 pergunnahs, of which 13 are ports. The amount of revenue in ficea-rupees is 10,96,223—3—11. The forces

forces are rated 67,375 cavalry, and 8900 infantry.

The largest as well as the most valuable portion of Guzzurat is divided between the Paishwa, or nominal head of the western empire of the Mahrattas, and Futty Sing Gwicker, whose dominion extends chiefly over the northern region. The English army, under General Goddard, were once in possession of the finest part of this soobah, having reduced the important fortreffes of Baffein and Ahmedabad, and penetrated the inland country to the very foot of the Gauts; but, in the peace negotiated with the Mahrattas in 1783, these splendid acquisitions were prudently relinquished, and they at this day remain invested only with the sovereignty of Bombay, Salfette, and the adjoining ifles.

AJMEER.

The greatest length of Ajmeer is 168 cose, and the extreme breadth includes 150 cose. On the east lies Agra; on the north, part of Delhi; it has Guzzurat on the fouth; and Deybalpore of Multan confines it on the west. The soil of this soobah is represented as a deep sand; and therefore the success of the

harvest

harvest depends entirely upon the periodical rains. Their winter is temperate; but the summer is intensely hot. The revenue is in general a seventh or an eighth of the produce of the harvest; little being paid in ready-money. The common people are said to live in houses with pitched roofs, built of bamboo and straw. To the south are mountains; and the whole of this soobah abounds with strong holds.

Ajmeer is composed of Maywar, Marwar, and Hadowty. Maywar contains ten thousand villages, and the whole of firear Chitore is dependent upon it. It is in length 40 cose, and in breadth 30 cofe: and it has three very confiderable forts: viz. Chitore, Cowmblere, and Mandel. The governor refides at Chitore. In Chowra is an iron mine. In Jainpore and fome places dependent upon Mandel are copper mines. The present possessions of these lands are native zemeendars, who anciently were named Rawel, but for a long time past are called Ranna. They are of the Ghelote tribe, and confider themselves to be descendants from Noorshirvan, king of Persia. This circumstance is somewhat singular; but one still more fingular occurs in the same page: for, the elected rajah has the Keshkeh drawn upon his forehead with human blood. This cultom VOL. I.

custom alone seems to prove that they are not of the true line of the blood-abhorring Hindoo. Marwar is in length 100, and in breadth 60, cofe. Sircars Ajmeer, Jewdehpore, Sirowheh, Nagore, and Beykaneer, are dependent upon it. The Rathore (Mahratta) tribe have inhabited this division for ages past. They have many forts, of which the following are the most famous: Aimeer, Jewdehpore, Beykaneer, Jelmeer, Amerkote, and Jyugurh. Hadowty, called also fircar Nagore, is inhabited by the Hadeh tribe. This foobah is entirely in the possession of Sindia and the Mahrattas. It contains feven fircars, fubdivided into 197 pergunnahs. The amount of the revenue is 22,84,1507 daums; out of which 23,26336 are Seyurghal. It has 86, 500 cavalry and 3,47,000 Rajpoot infantry.

DELHI.

This foobah is fituated in the third climate. Its greatest length is stated at 165 cose; its extreme breadth at 140 cose. On the east lies Agra; on the north are mountains; on the south, the boundaries are Agra and Ajmeer; and Lodyaneh confines it on the west. The principal rivers are the Ganges and the Jum-

na : among the inferior streams may be numbered the Cagger. The climate is very temperate. Most of the lands are inundated during the periodical rains. Some places are faid to produce two harvests in a year. Here grow most of the fruits of Persia, Tartary, and Hindostan, with a great variety of flowers. Throughout this foobah are many grand buildings of stone and brick; and it is stored with the productions of every part of the globe. A part of the northern mountains of this foobah is called Kamaoon, where there are mines of gold, lead, filver, iron, copper, orpiment, and borax. Here are also found abundance of musk-deer, filk-worms, falcons of various kinds, and plenty of honey.

The city of Delhi has been already described at large. Sembhel (Sambul) is the city next deserving notice, in which is a Brahmin place of worship called Hurmundel, where it is faid the tenth Avatar will make his appearance. Whenever he comes, and under whatever form, things will be found strangely altered in these parts since the period of the last Avatar, or the benevolent Boodh's appearance among the Hindoos. In sircar Sembhel the rhinoceros is frequently hunted. Of his skin they make shields, and his horn is applied

applied to the ends of bows, where the string is fastened. Sehrind is called a famous city; it was doubtless the Serinda whence filk was brought in the time of Justinian; and, although Mr. Rennel observes that no mention is made of a filk-manufacture at this place in the Ayeen Akbery, yet he must have noticed that, a few lines above, this foobah is faid to abound in filk-worms. Tanaffar is held facred by the Hindoos. The river Sirfutty, to which they pay profound adoration, runs near it; and in its vicinity is the venerated lake Koorkhet. This was the scene of the Mahabbarat, or the great war. The city of Hustnapore was the imperial residence of Rajah Behrut, a prince renowned for justice and love of his subjects; of whom, and his capital of Hustnapore, or Hastinapore, much more will be faid hereafter.

This foobah contains eighty firears, subdivided into 232 pergunnahs. The revenue is 60,16,15,555 daums; out of which 3,30,75,739 daums are Seyurghal.

The Seiks, that rifing and powerful state before-mentioned, connected together by a strong federal union, are at this day in posfession of the western parts of Delhi. The southern region, extending quite to the city of Delhi, fuccessively under the controul of the Jauts and Nudjuff Khan, has been of late years seized upon by Sindia, who permits Shah Aulum, his royal prisoner, to reign king in name, but, in reality, a menial pensioner upon his bounty, in the humbled metropolis of the vast empire of his ancestors. The north and eastern territories, to the mountains of Sewalic, are governed by the grandson of the late Nidjib Dowlah, the guardian of the young prince, whom Abdallah, in 1761, placed upon the imperial throne.

LAHOOR.

The length of this foobah measures 180, the breadth 86, cose. It is situated in the third climate. On the east lies Serhind; on the north Cashmeer; on the fouth Beykaneer of Ajmeer; and Multan bounds it on the west. Its rivers have been before enumerated. Lahoor is described as very populous, highly cultivated, and exceedingly healthy. The cultivated lands are chiefly supplied with water from wells. The winter is much severer here than in any other part of Hindostan, although considerably milder than in Persia and Tartary. Through his majesty's (Akber's) ensured that the start of the same of the sam

couragement, here are to be procured the choicest productions of Turan, Iran, and Hindostan. Musk-melons are procurable here all the year, either from the native soil or from the neighbouring provinces. Ice too is brought from the northern mountains, and sold throughout the year. Their horses refemble those of Irak, and are very fine. In some parts, by sifting and washing the sands of the rivers, they obtain gold, silver, copper, tin, brass, and lead. From a mountain in this soobah rock-salt is dug in great abundance. It is also samous for handicraftsmen.

Of Lahoor, the capital of this foobah, enough has been already faid. Nagracaut is a city fituated upon a mountain, with a fort called Kangerah. In its neighbourhood is a most ancient and celebrated place of Hindoo devotion and pilgrimage, where the blind enthusiast cuts out his tongue as a facrifice to the idol. Lahoor contains five duabehs, or interamnian regions, subdivided into 234 pergunnahs. The revenue amounts to 55,94,58,423 daums. Its forces are 54,480 cavalry and 426,086 infantry.

MULTAN.

This foobah is fituated in the first, second, and third, climates. Its length from Fee-roozpore

roozpore to Sewistan is 403 cose; its breadth from Rhutpore to Jelmeer 108 cose. If Tattah be confidered as included in it, which in fact it is by Abul Fazil, the additional length to Cutch and Mocran will measure the enormous line of 660 cose. On the east lies Serhind; the pergunnah of Shoor joins it on the north; on the fouth it is bounded by the foobah of Ajmeer; on the west are situated Cutch and Mocran, both of which are independent territories. Tattah is watered by the rivers before-described in Lahoor, which, paffing through this foobah, unite their streams, and form the Sind. Of this river, and its mighty though remote rivals in fame, the Ganges and Brahmapooter, the reader will find a particular and ample account at the end of this Geographical Differtation. Mountains extend along the north fide of this foobah. It refembles Lahoor in many refpects, and its fruits are delicious: it has, however, the benefit of but little rain, which feldom falls here; and the heat is excessive. Between Seewee and Bhakor is a large defert, over which, during three of the fummer months, there blows the pernicious hot wind, called in Arabia Semoon. Only two cities of eminence are mentioned in this foobah: the first . S 4

first is Multan, the capital, one of the most ancient cities of India, having been, according to Mr. Rennel, the metropolis of the Malli; and from them probably deriving the name of Multan, or Malli-patan; that is, the city of the Malli. It is described as having a strong brick fort and a beautiful lofty minaret. The second is Bhakor, which is said to have a good fort, and in ancient books to have been called Munsoorah.

Multain contains three fircars, subdivided into eight pergunnahs. The amount of its revenue is stated at 15,14,03619 daums; of its forces at 13,785 cavalry and 165,650 infantry. This soobah, generally speaking, may be said to be at this day in the hands of the Seiks, as they are doubtless in possession of the most fertile and cultivated regions of it.

Sircar TATTAH, once an independent territory, but now included in Multan, is of fuch confiderable note, as to be honoured by the fecretary of Akber with a longer account than that of the foobah to which it is annexed. Its length, from Bhakor to Cutch and Mocran, is 257 cofe; and its breadth, from the town of Budeyan to Bunder Lawry, is 100 cofe. On the east lies Guzzurat; on the north Bhakor and Seewee; on the fouth

the fea; and on the west Cutch and Mocran. Tattah is fituated in the fecond climate; and its capital of the same name, according to our author, is in latitude 24. 10', but according to Mr. Rennel in 24° 50'. " The winter in this country is fo temperate, that there is no occasion for furs, and the heat of the fummer, except in Sewistan, is very moderate. In Tattah are various fine fruits: and the mangoes are remarkably good. A fmall kind of melon grows wild. Here are alfo a great variety of flowers; and their camels are much efteemed. The inhabitants travel chiefly by, water; they build boats of various constructions; and have not less than 40,000 in number. They hunt the wild ass, hares, hogs, and the kotehpateheh; and they are fond of fishing. The husbandman divides his crops with the government, but is allowed to keep two-thirds. Here are iron mines and falt pits. The food of the natives is rice and fish: the former is fine and in abundance; of the latter, a particular kind called Pulwa, which comes from the fea into the Indus, is exceedingly delicious. They dry fish in the fun, and make an advantageous trade of it; they also extract oil from fish, which they use in building boats." The mountains

mountains of this foobah are numerous, and run in various directions, nourishing on their lofty fides the favage and warlike race of Balloches, or Balloges; some tribes of which. fince the rapid decline of the Moguls, have feized upon a confiderable territory on the borders of Mewhat, and established themselves in the heart of the empire. They breed horses and camels upon these mountains. One of these tribes is named Nomurpy by Abul Fazil; and as this was part of the track called by the ancients INDO-SCYTHIA, Mr. Rennel feems inclined to think that they may be the descendants of the Scythian Nomades. This conjecture derives force from the prevalence of a custom which was peculiar to the natives of ancient Scythia, that of the graziers who inhabit the villages on the banks of the Indus occasionally changing their pofition, and wandering with the deviations of the stream.

In ancient times the capital was Brahminabad, which was then a very populous city. We may judge of its magnitude from that of its fort, which is faid to have had 1400 bastions, a tenab distant from each other; and of this fortification there are at present considerable yestiges. Mr. Rennel, in confirmation firmation of this, observes, that the ruins of a city, supposed to be Brahminabad, are still visible within four miles of Tatta: and the reader will remember that Mr. Rennel writes near 200 years after Abul Fazil. Tatta, which is the Daibul of the Persian tables of Sir William Jones, is now the fourth sircar of the soobah of Multan, and is said to contain five inferior sircars, subdivided into sifty-three pergunnahs. The revenue amounts to 6,615,293 daums.

CASHMERE.

Cashmere, the last of the soobahs in Akber's division of Hindostan, is situated in the third and partly in the fourth climate. It is faid to be composed of Cashmere, properly fo called, Pehkely, Bhember, Sewad, Bijore, Kandahar, and Zabulistan. This soobah is stated by Abul Fazil as extending 120 cose in length, and from ten to twenty-five cose in breath. Mr. Rennel, citing this passage, either by mistake or as a correction, mentions the breadth as only fifteen cofe. He inclines to think the whole statement exaggerated; and tells us, from Mr. Forster's route, that Cashmere is 80 miles in length, 40 in breadth, and of an oval form. Of

Of this " delightful and extraordinary valley of Cashmere," as it is called by Sir W. Jones, in a passage quoted before, the description in the Ayeen Akbery abounds with fuch ardent expressions of admiration, that we are induced really to suppose it to be, what by Eastern writers it is often called, the paradife of the Indies. It is reprefented as " a garden in perpetual fpring, entirely furrounded with mountains, the fortifications with which nature has furnished it, of an astonishing height, fo that its grand and romantic appearance cannot fail of delighting those who are fond of variety, as well as those who take pleafure in retirement. The water is remarkably good, and the cataracts are enchantingly magnificent. Violets, rofes, narciffuses, and innumerable other flowers, grow wild in Cashmere. The spring and autumn difplay fcenes that at once delight and astonish. It has plenty of excellent fruits, especially melons, apples, peaches, and apricots; and the rain descends not in a deluge, as in other parts of Hindostan, but in light and genial showers." Amidst these advantages, however, they are not free from the dreadful calamity of frequent earthquakes; " on which account they do not build their houses

houses with brick and stone, but of wood, with which the country abounds." In Cashmere are various manufactures of wool, particularly of shawls, which are carried to all parts of the globe; and of filk, which occasions the general cultivation of mulberrytrees, not so much for the fruit as for the leaves, on which the filk-worms feed. As the inhabitants are extremely happy, fo we must fuppose them to be remarkably industrious; for every town in this foobah has as many handicraftimen as are to be found in the large cities of other countries. They live chiefly upon rice, fish (either fresh or dried), and vegetables. Of animals, they have a species of sheep called Hundoo, whose fiesh is exceedingly delicious and wholesome. They have horses, small but hardy; and cows black and ugly, but yielding plenty of good milk. They breed neither elephants nor camels; and they have neither fnakes, fcorpions, nor other venomous reptiles.

Sirrynagur is mentioned as the capital of Cashmere in Akber's time, and it is said for ages to have been in a flourishing state. The name of Sirrynagur has fince been exchanged for that of the province, and the modern capital of Cashmere is described by Mr. Forster, the last English

English visitor, as a large city built on each side of the Chelum, the ancient Hydaspes, which rolls through the centre of the valley, whose whole extent, according to tradition, it anciently overspread in the form of a vast lake, It is situated in latitude 33° 49': its longitude is 73° 11'. The account of this foobah, and of the provinces included in it, is uncommonly minute; and, from an enumeration of many abfurd superstitious practices, somewhat tedious. A general idea of its wealth, traffic, and natural productions, has been given above; and I shall not attempt to follow Abul Fazil through all its various fubdivisions, but hasten on to the two important fircars, as they are here called, of Candahar and Cabul. The ancients divided Cashmere into two parts only, calling the eastern division Meraj and the western division Camraj. Its revenue, in the reign of Aurungzeb, Mr. Rennel states at no more than about 35,0001. fterling; a circumftance, he observes, that feems to prove Cashmere to have been a favoured province. The forces Abul Fazil states at 4892 cavalry and 92,400 infantry.

CANDAHAR.

Candahar is fituated in the third climate. It is in length 300 cose, and measures in breadth

breadth 260 cose. Its capital of the same name is fituated on the mountains, which the Greeks called Paropamifus, and it is supposed to have been built by Alexander, whose Eastern name of Secander is easily traced in that name. It has been considered, from early antiquity, as the gate of Hindosta towards Persia; and through it every ip/ading army from that quarter has contantly passed. It is situated in latitude 325 and in longitude 67° 05'. The heat in jummer at Candahar is extreme, while the cold in winter is fevere. It has two forts of uncommon strength and magnitude. There are fruits and flowers in abundance in this foobah, and the wheat is remarkable for its whiteness.

CABUL.

Cabul is fituated in the third and fourth climates. Its length from Attock Benares, on the banks of the Sind, to Hindoo-Ko (the Indian Caucasus) is 150 cofe, and from the river to Chaghanferai, the eastern boundary, to Charbargh is 100 cofe. It is impossible, Abul Fazil observes, to give in writing an adequate idea of the excellence of the air and water of this country. Although the winter is rather severe, yet it never does any injury.

The temperate and the frozen regions of this very mountainous foobah so nearly join, that you may pass from heat to cold in the course of a day. The country abounds with delicious fruits. The melons, however, are an exception, being but indifferent; and the harvests are not very flourishing. Hindoo-Ko lies in the centre between Cabul, Badakshan, and Balkh. The phabitants are chiefly Afghans, who live by pastrage, and breed on its lofty mountains and on its extensive plains innumerable droves of horses.

of horses, canels, sheep, and goats.

The extensive, the celebrated, the commercial, capital of Cabal, once the imperial refidence of Baber, is fituated in latitude 34° 36', in longitude 68° 58'. According to Abul Fazil, it is a very ancient and beautiful city; and Pusheng is said to have been its founder. It is fituated, Mr. Rennel informs us, at the foot of the Indian Caucasus; and not far from the fource of the Attock river, which passes very near or under it. Its fituation, he adds, is spoken of in terms of rapture by the Hindoo historians, Cabul being less romantic than pleafant; enjoying a delightful air, and having within its reach the fruits and other products both of the temperate and the torrid zone. It is the gate of Hindostan towards Tartary, as Candahar

Candahar is towards Perfia; and, if both places be properly guarded, that extensive empire is safe from the irruption of foreigners. Similar to this observation, which is taken from the Ayeen Akbery, is a remark in the Short Description of Asia, p. 7, "that, according to the Indians, no man can be called the ruler of India who has not taken possession of Cabul." Baber was in possession of it; and soon became the Indian sovereign. Abdallah, its late master, made some rapid advances towards the conquest of Upper India; and disposed at his will of the crown of Delhi. In this soobah a pergunnah, composed of villages and hamlets, is called Tooman.

Tooman Bekram, commonly called Peishore, enjoys a delightful spring-season. Its capital, called also Peishore, is a considerable city; and is situated on the great road leading from Attock to Cabul. Tooman Ghuzneen (Gazna) deserves notice from the renown which in former times its capital enjoyed, having been the imperial city of the Gaznavide sultans. Gazna was formerly called Zabul; whence the whole province was called Zabulistan; and Candahar was at that time only considered as a part of it. This ancient capital is placed by D'Anville in the north-west

extreme of the foobah; but Mr. Rennel, guided by Mr. Forster's Journal, has placed it in a more probable fituation, in the very heart of the province. In the Description of Asia, cited above, it is said to be " an unpleafant city; and that the inhabitants are forced to fend to Meimend for their fruit and herbage." The Ayeen Akbery corroborates this account, by affirming, "that the hufbandman undergoes great labour, from being obliged to bring fresh mould from Cabul every year; the natural foil of the country being too poor for cultivation." The whole of Cabul confifts of twenty Toomans. Its revenue is stated by Abul Fazil at 6 crore, 73 lacks, and 6983 daums. The number of its forces is not afcertained in the Ayeen Akbery, but Manuchi . reckons them at 60,000 cavalry and 12,000 infantry. This whole northern tract of country, including generally Cabul, Candahar, Gazna, Peishore, Gaur, Seistan, and Chorafan, and extending in length not less than 650 Bengal miles from east to west, owns for its potent fovereign Timur Shah Abdallah. He is the fon of that Ahmed Abdallah, who, upon the death of Nadir, seized upon these parts of his vast empire, and erected them into an independent kingdom, differing little in limits and extent from the ancient empire of Gazna.

Such were the particulars which feemed most deserving of notice, and most illustrative of the following pages, in the Ayeen Akbery. Reserving the consideration of the geography of the Peninsula for that period of the ensuing history when it was first penetrated by the arms of the Mohammedans, I shall conclude this Dissertation on the Geography of the country, which is properly called Hindostan, with an account of those three mighty rivers which at once bound and adorn it.

I shall begin with the INDUS, because we have been just describing the countries through which it passes.

In the account of the river INDUS, given by Pliny,* that author observes, "Indus ab incolis Sandus appellatur;" the river Indus is by the natives called Sandus. How very much is it to be lamented that he and his brethren of classical celebrity have not more frequently given us the native appellation of Indian cities, mountains, and rivers! How much unavailing solicitude would they have saved the geographer and the historian! Mr. Wilkins,

T 2 in

^{*} Plinii Nat. Hift. lib. vi. cap. 20. Aldi edit. This edition reads Sandus; all the others Sindus.

in a note to his translation of the Heetopades,* informs us, that the proper name of the river, which we call the Indus, as written in Sanscreet characters, is SEENDHOO, which by the vulgar is pronounced SEEND. The Ayeen Akbery+ expresses doubt concerning the exact fite of its fource; for that book observes, that, according to some, it rises between Cashmere and Cashgur, while others place its source in Khatai, or Tartary. Major Rennel has found no opportunity to decide the question; but thinks it may possibly fpring from the west fide of that ridge of Imaus, which, in the opinion of the ancients, separated the two Scythias, in about the 38th degree of north latitude. The first part of its course seems to lie through that region of Cashgur, I which is known to be a defert of deep and black fand, particles of which being washed away by the rapidity of the stream, and mingling with its waters, give them a black, or rather a blue. colour; whence, probably, in its early course, it is called NILAB, or the BLUE river. Sir W. Jones, speaking of the probable connection that anciently existed between India and Egypt, feems inclined to derive even the name of the river

[&]quot; Hectopades, p. 333. † Ayeen Akbery, vol. ii. p. 132. I See the account of Calhgar, in Abulgazi Khan's History of the Tartars, vol. ii. p. 476.

river Nile from the Sanscreet root NILA, BLUE; and is confirmed in that idea by the great geographer Dionysius expressly calling the waters of that river an azure stream.*

Entering Hindostan, nearly in latitude 34', it paffes through Kenore and Puckely, and receives in its course the tribute of ten principal streams, which descend from the Persian and Tartarian mountains on the north-east and north-west. From the city of Attock, downwards to Multan, it is called the river of ATTOCK. Below Multan, which is about the same distance from the sea as Allahabad. that is, about 800 miles by the course of the river, the Seendhoo, fwollen with all the rivers of the Panjab, flows majestically down to Tatta, under the affumed name of Sook, or SHOOR. Near Tatta it divides itself into a number of channels; and the principal branch rolls rapidly on to the ocean, under the new appellation of MEHRAN.

The breadth of the Indus at Bazaar, a town fituated about twenty miles to the north-east of Attock, according to Mr. Forster, is three-quarters of a mile. He observed the stream to be berry rapid and turbulent, although not agitated by any wind; and the water itself he

^{*} Afiatic Refearches, vol. i. p. 271.

found to be extremely cold. Captain Hamilton, whose account of this river is the most accurate and extensive of any writer before his time, represents its breadth at Tatta to be one mile, and the fame breadth is affigned it by Mr. Rennel at the town of Ritchel, on the coast, where its largest branch enters the ocean. The former of these gentlemen states the depth of the Indus at fix fathom, and its velocity at four miles per hour in the dry feafon; he adds, that the inundations prevail in April, May, and June; that they leave a fat flime on the ground, which they till eafily before it dries, and which, when fown and harrowed, never fails to produce a good crop; that the internal commerce carried on by means of the Indus is immense, and that the river itself is navigable, for veffels of near 200 tons, as high up as to Cashmere. It is in every respect, however, far inferior to the Ganges.

The Delta of the Indus extends in length about 150 miles along the sea-coast; and its greatest depth from the most prominent part of the base to its apex is 115 miles. The lower region of this Delta is throughout intersected by numerous creeks and rivers: it for the most part consists of noisome swamps or muddy lakes, and is totally destitute of trees.

The upper parts of the Delta, however, are well cultivated, and yield abundance of rice. After the rains, the Indus becomes exceedingly impetuous and turbid; and, in the mouths of the river, which is called the BORE, or fwell of the current, occasioned by the sudden influx of the tide, is dreadfully high and dangerous.

Two objects, still more noble and magnificent, now present themselves for consideration; the Ganges and the Brahmapooter: of these two great rivers, of which the source of the former and the very name of the latter were unknown to antiquity, modern travellers have at once explored the origin and traced the progress.

The GANGES, in the language of Hindostan, is called Pudda, or Padda, a word in Sanfereet fignifying foot; because, as some Brahmins affirm, it flows from the foot of the god Veeshnu. According to the opinion of others, however, as is afferted in the Ayeen Akbery, it flows from the hair of Mahadeo. But whether the GANGES be allowed to flow from the hair of one deity or from the foot of another, the allegory fimply imports, that the grateful Hindoo acknowledges to receive the bleffing of its waters from the immediate bounty of the great Creator. It is also denominated Burra Gonga, the great river; and T 4

and Gonga, the river; whence are derived its native appellation of Gong and its European name of the Ganges.

The real fources of the Ganges, I have observed, were unexplored by the ancients. The river itself was totally unknown to the great historian of antiquity, Herodotus, from whose declaration * it is evident, that, " the fandy deferts beyond the Indus" were the utmost limit of his knowledge of India. In the time of Strabo, who flourished in the reign of Tiberius, near five centuries after, the Ganges had been failed up as high as Palibothra or Patna; and, in the geography of that writer,+ it is faid to run fouthward from the mountains of Emodus. In reality, the springs of this celebrated river are aftertained by modern discoveries to lie in the vast mountains of TIBET, about the thirty-third degree of north latitude. From the western fide of KENTAISSE, one of those mountains, it takes its course in two branches for three hundred miles westward, but inclining to the north: at that distance from their fountain, meeting the great chain or ridge of mount Himmaleh, the ancient Imaus, the two ftreams are compelled to take a fouthern direction,

and

^{*} Herodoti, lib.iii. p. 2. Edit. Stephani, 1592.

⁺ Strabonis Geograph. lib.xv. p. 683. Bafilex, 1549.

and in this course, uniting their currents, form what is properly called the GANGES. Amidst the rugged valleys and steep defiles of that remote and mountainous region, the Ganges continues to wind, until it pours the collected body of its waters through a rocky cavity of the mountain into a vast bason, scooped out by their violent precipitation at its foot. To this rocky cavity, the blind superstition of the natives has attached the idea of some resemblance to the head of the animal, which, like the Apis formerly in Egypt, is holden facred throughout Hindostan; and the cavern, through which the Ganges rushes at GANGOTRI, is called the mouth of the cow. From every inquiry of the few Europeans who have vifited this remote spot, no real refemblance can be traced; but the fame superstition, which originally fabricated, perseveres in believing and propagating, the error. Both Sheriffedin, and Mr. Orme after him, place the cow-head rock at the Straits of Cupele, and affirm that Timur attacked the Indians, who were there affembled in great multitudes to purify themselves in the facred stream, and adore the fancied similitude of their favourite quadruped. After its ' paffage through the rock of Gangotri, the Ganges

Ganges takes an eafterly direction for near three hundred miles, amidst the rugged valleys and fleep defiles of Sirinagur; and at Hurdwar again forces itself a passage through the chain of mountains called Sewalick; inferior indeed to Imaus in grandeur and altitude, but still of a most sublime elevation and most majestic appearance. From the mountains of Sewalick, that form the immediate boundary of the provinces lying north of Delhi, the Ganges descends, with little less impetuofity than from GANGOTRI, into the level and cultivated region of Hindostan; then flowing on through delightful plains, and diffufing riches and verdure in its progrefs, at Allahabad receives a rich tribute to its stream in the waters of the Jumna. If we may believe the Brahmins, another facred river, called the Seraswatty, joins these rivers under-ground; and therefore this fpot, confecrated by the three-fold junction of their waves, has ever been the refort of devout pilgrims from every province of Hindoftan, and is denominated, in the Aycen Akbery, the king of worshipped places. In its course from Allahabad to the ocean, a course of eight hundred and twenty miles, the Ganges, rolling on through the centre of Bahar and Bengal,

Bengal, among innumerable cities that proudly lift their heads on its banks, is swollen with the influx of many other considerable rivers; some of which, Mr. Rennel informs us, are equal to the Rhine, and none smaller than the Thames. About two hundred and twenty miles from the sea, that is, about thirty miles below Rajahmal, commences the head of the Delta of the Ganges, which there, dividing into two great branches, seeks the ocean by two different and remote channels.

The western branch, or to speak more accurately, the two westernmost branches, called the Coffimbazar and Jellinghy rivers, united into one stream, descend by the city of Hoogly, whose name in passing they affume; and, washing the walls of Chandernagore and of Calcutta, rush in a broad and deep stream into the Gulph of Bengal, at the distance of 180 miles from the grand Eastern Ocean. This is the only navigable branch of the Ganges for large thips; the other numerous channels of this river being choaked up by bars of fand and banks of mud, thrown up by the violence of the current and the strong foutherly winds. The eaftern branch, or rather the main stream of the Ganges, flows on towards Dacca, once

the capital of Bengal, which is watered by a noble arm of that river; and, about fixty miles below that city, mingling its waters with those of the Megna, rolls in one united and majestic stream into the ocean.

The breadth of the Ganges varies in different places, and according to the different feafons, from one mile and a quarter to three miles. At 500 miles from the sea, Mr. Rennel informs us that the channel is thirty feet deep, when the river is at its lowest; and that it continues at least that depth to the ocean. The velocity of the current likewife varies according to the wet or dry feafons. In the dry months the medium rate of motion is less than three miles an hour; but, at the period of the inundations, that motion is often increased to five and fix hours; and Mr. Rennel records an instance of his own boat being carried at the altonishing rate of 56 miles in eight hours.

An object equally novel and grand now claims our attention; so novel as not to have been known to Europeans in the real extent of its magnificence before the year 1765, and so awfully grand, that the astonished geographer, Major Rennel, thinking the language of prose inadequate to convey his conceptions,

[301]

has had recourse to the more expressive and energetic language of poetry; but

Dare firetch her wing o'er this enormous mass
Of rushing waters; to whose dread expanse,
Continuous depth, and wond'rous length of course,
Our stoods are rills.

This stupendous object is the BRAHMA-POOTER, a word which in Sanfcreet fignifies the fon of Brahma; for no meaner origin could be affigned to fo wonderful a progeny. This supreme monarch of Indian rivers derives its fource from the opposite side of the fame mountains from which the Ganges fprings; and, taking a bold fweep towards the eaft, in a line directly opposite to the course of that river, washes the vast country of Tibet, where, by way of distinction, it is denominated SANPOO, or the river. Winding with a rapid current through Tibet, and, for many a league, amidst dreary deferts and regions, remote from the habitations of men, it waters the borders of the territory of Lassa, the residence of the grand Lama; and then deviating, with a cometary irregularity, from an east to a fouth-east course, the MIGHTY WANDERER approaches within 200 miles of the western frontiers of the vast empire of China.

China. From this point its more direct path to the ocean lay through the Gulph of Siam; but, with a defultory course peculiar to itself, it fuddenly turns to the west through Assam, and enters Bengal on the north-east quarter. Circling round the western point of the Garrow mountains, the Brahmapooter now takes a fouthern direction; and, for 60 miles before it meets the Ganges, its fifter in point of origin, but not its rival in point of magnitude, glides majestically along in a stream which is regularly from four to five miles wide, and, but for its freshness, Mr. Rennel fays, might pass for an arm of the sea. About forty miles from the ocean these mighty rivers unite their streams: but that gentleman is of opinion that their junction was formerly higher up, and that the accumulation of two fuch vast bodies of water scooped out the amazing bed of the Megna Lake.* Their present conflux is below Luckipoor, and by that confluence a body of fresh running water is produced, hardly equalled, and not exceeded, either in the old or the new hemisphere. So stupendous is that body of water, it has formed

[•] Megna and Brahmapooter are names belonging to the same river in different parts of its course. The Megna salls into the Brahmapooter, and, though a much smaller river, communicates its name to the other during the rest of its course.

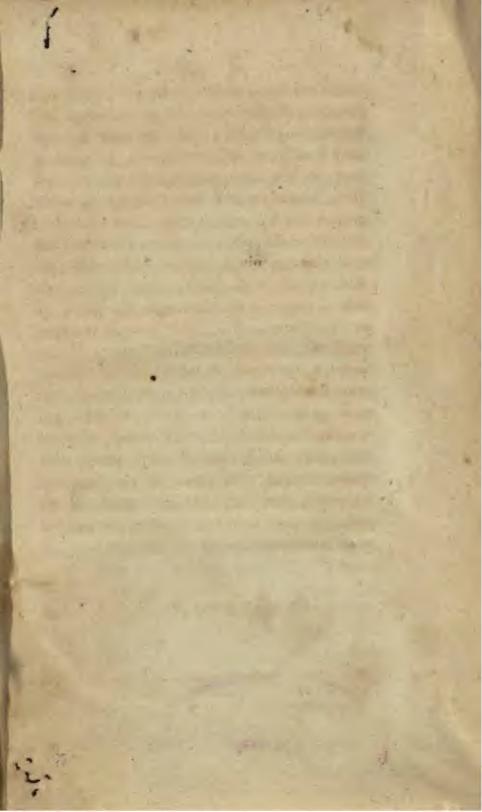

formed a gulph of such extent as to contain islands that rival our Isle of Wight in size and fertility; and with such resistless violence does it rush into the ocean, that in the rainy seafon the sea itself, or at least its surface, is perfectly fresh for many leagues out.

The Delta, formed by the Ganges, exhibits an appearance widely different from that formed by the Indus; and is confiderably more than twice the area of that of the Nile. It is at the base near two hundred miles broad, and has, Mr. Rennel informs us, no less than eight confiderable openings into the fea, each of which we pronounce without hefitation to have probably been, in its turn, the principal mouth of the Ganges. This whole extent is one vast forest; from that circumstance denominated the woods, or sun-DERBUNDS, whose dangerous recelles the fortitude and industry of man have never yet completely explored, and which, from their forming an impenetrable barrier on that fide. as well as from their affording an inexhauftible fupply of timber for boat-building, the policy of the English has not yet attempted to clear. These woods are the gloomy haunts of every species of savage animals; but particularly of those formidable race of tigers

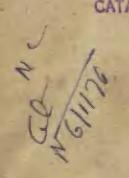

called the Royal or Bengal tiger, fo celebrated throughout the world. The fierceness and intrepidity of these animals are so great, that they have been known to fwim, in quest of prey, to the boats that lie at anchor in the river, and often make havoc among the woodcutters and falt-makers, who carry on " their dreadful trade" upon the shore. Besides those principal openings above - mentioned, the whole coast of the Delta, bordering on the sea, is indented with innumerable rivers and creeks, while the internal parts of the Sunderbunds are interfected in every direction with a thousand streams, which form a complete inland navigation, and which, according to a description given me by the late worthy Colonel CHARLES IRONSIDE, who had frequently failed through these woody solitudes, abound with fcenes fo romantic and beautiful, that they alternately excite in the mind the most rapturous admiration, and impress it with most awful astonishment.
